1 INTRODUCTION

1.1 Location

The Hatch Court Light Industrial Area ('the site') is located in the City of Kalamunda, approximately 13km east-north-east of the Perth Central Business District (Figure 1). The site is made up of 16 lots bounded by Perth Airport Land to the north-west, Kalamunda Road to the south-west, Stirling Crescent to the south-east and Adelaide Street to the north-east (Figure 2). The site is approximately 30ha in size.

1.2 Background

The site was originally intended for residential use by rezoning to 'Urban' under the Metropolitan Region Scheme (Amendment 1187/57) in 2010. In February 2017, Council supported a request to rezone the HCLIA under subject Scheme Amendment 80 from 'Urban Development' to 'Light Industry'. It was considered that the proposed amendment would generate the need to prepare a local structure plan given previous issues raised by residents concerning traffic, access and management of the surrounding residential interface.

In January 2018, the Minster approved Scheme Amendment 80. The approval included amendments requested by the Western Australian Planning Commission (WAPC) which introduced additional site and development requirements under Clause 5.23 to the City's Local Planning Scheme No.3 (LPS3) including a Local Structure Plan.

Dynamic Planning and Developments commissioned PGV Environmental to prepare an Environmental Assessment Report (EAR) to provide an assessment of the environmental attributes of the site to assess the proposed Structure Plan (Appendix 1) to ensure that any significant environmental features of the site are considered during planning.

1.3 Scope of Works

The Environmental Assessment Report includes:

- A description of the recent and present land use including:
  - Surrounding land uses;
  - Assessment of current and historical activities on the site and surrounding areas; and
  - A search of the Department of Water and Environmental Regulation Contaminated Sites and Water Information; and
  - Heritage features.
- A description of the physical characteristics including:
  - Geology and Soils;
  - Hydrology;
  - Acid Sulphate Soil Risk Mapping.
- A description of the flora, vegetation and fauna values from the site visit and previous studies undertaken on the site;

- A wetland/creekline assessment including a site visit, mapping of wetland vegetation and determining foreshore values as per guidance including:
    - Operation Policy 4.3: *Identifying and establishing waterways foreshore areas* (DoW 2012);
    - Guidance Note 6: *Identifying and establishing waterways foreshore areas* (DoW 2013); and
    - Water Note 23: *Determining foreshore reserves* (WRC 2001).
- Implications, if any, under Western Australian policies and legislation such as the Environmental Protection Act 1986 and *Biodiversity Conservation Act 2016* and the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999*.

2 LEGISLATION, POLICY AND GUIDELINES

The environmental assessment of the site has taken into consideration the following legislation, policy and guidelines and these will guide the required and expected management outcomes from the Commonwealth, State and Local government agencies.

2.1 Commonwealth Legislation

The *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) is the Australian Government's central piece of environmental legislation. It provides a legal framework to protect and manage nationally and internationally important heritage places, ecological communities, flora and fauna that are defined in the Act as Matters of National Environmental Significance (MNES).

The Environmental Assessment identifies any MNES that may be impacted by development on the site. There is some habitat for listed species of Black Cockatoos in the Structure Plan Area. Impacts on Black Cockatoo habitat will be quantified.

2.2 State Legislation

2.2.1 *Environmental Protection Act 1986*

The *Environmental Protection Act 1986* (EP Act) is administered by the Department of Water and Environment Regulation (DWER). The Act provides for conservation, preservation, protection, enhancement and management of the environment and for matters incidental to or connected with it. The Act establishes head powers to provide mechanisms for the development of Environmental Protection Policies (EPP), the referral and assessment of proposals, the control of pollution and enforcement.

The Act also provides for an Environmental Protection Authority (EPA) that is a statutory authority and is the primary provider of independent environmental advice to Government (Environmental Protection Authority, 2024). The EPA is assisted by the Office of the EPA that forms part of DWER.

The EP Act has several Parts that are particularly relevant to the proposed Light Industrial development.

Clearing Permit

The EP Act regulates the clearing of native vegetation under Part V, Division 2 (sections 51A–51T). Under the EP Act, clearing of native vegetation requires a permit from DWER unless there is an exemption under the *Environmental Protection (Clearing of Native Vegetation) Regulations 2004*. Proposals that have approval by means of a subdivision are exempt from requiring a clearing permit to clear native vegetation if implementing the subdivision in accordance with the subdivision conditions requires the clearing of native vegetation.

Works Approval

Works approvals in Western Australia are regulated under Part V, Division 3 of the Environmental Protection Act 1986 (EP Act). This section mandates that construction or modification of prescribed

premises, which have the potential to cause pollution or emissions, requires a works approval before work commences. Individual development may require approval under this party of the EP Act.

2.2.2 *Biodiversity Conservation Act 2016*

The *Biodiversity Conservation Act 2016* (BC Act) protects all native species and threatened ecological communities The BC Act recognises that activities involving the taking of flora or fauna (other than threatened species) and the disturbing of fauna (including threatened species) that are approved under the EP Act do not require further approval under the BC Act, if they are undertaken in accordance with any biodiversity conservation conditions that are applied to an authorisation. These activities include clearing of native vegetation done in accordance with an implementation decision under Part IV of the EP Act.

2.2.3 *Contaminated Sites Act 2003*

The *Contaminated Sites Act 2003* (WA) is legislation that establishes a framework for identifying, reporting, classifying, and remediating land contaminated by hazardous substances above background levels in Western Australia. It forces responsible parties (polluters or owners) to manage risks to human health and the environment.

2.2.4 *Aboriginal Heritage Act 1972*

The *Aboriginal Heritage Act 1972* (AH Act) protects all Aboriginal sites whether or not they are known and registered under the AH Act.

If any artefacts or other heritage values are discovered during preliminary searches consultation, clearing or construction works they will be required to be managed according to the AH Act.

2.3 State Policy and Guidance

2.3.1 State Planning Policy No. 2.8 Bushland Policy for the Perth Metropolitan Region

State Planning Policy No. 2.8 Bushland Policy for the Perth Metropolitan Region (SPP 2.8) (Government of Western Australia, 2010) in conjunction with Bush Forever (Government of Western Australia, 2000) seeks to ensure the protection of at least 10 per cent of the original extent of each vegetation complex within the Perth Metropolitan Region. SPP 2.8 was developed to ensure that bushland protection and management issues are appropriately addressed and integrated as a part of future land use. Bush Forever identified approximately 51,200 hectares of regionally significant vegetation for retention. The management of these areas include reservation and acquisition by the State government, negotiated planning solutions with owners who are seeking urban and/or industrial development and advice, assistance and incentive programs to support private conservation.

There is no vegetation on the site that has been identified for protection under Bush Forever and no Bush Forever sites adjacent to the site.

2.3.2 State Planning Policy No. 2.9 Water Resources

State Planning Policy No. 2.9 Water Resources (SPP 2.9) (Government of Western Australia, 2006) aims to ensure the protection and appropriate management of water resources in line with state guidelines as included within the planning framework. The broad aims of this policy are to:

- Protect, conserve and enhance water resources;

- Assist in ensuring the availability of suitable water resources to maintain essential requirements for human and other biological life and to maintain or improve the quality and quantity of water resources; and
- Promote and assist in the management and sustainable use of water resources.

As a part of implementing this policy, the Better Urban Water Management framework was developed (WAPC, 2008). The framework provides detail on how water resources should be considered at each stage of planning by identifying the various actions and investigations required with regard to regional and local planning strategies, town planning schemes, structure plans, subdivisions, strata subdivision and development applications (WAPC, 2008).

2.3.3 Waterways Policy

Government policy and guidance relating to waterways foreshore areas is primarily administered by Department of Water and Environmental Regulation (DWER). A number of guidance documents assist with the determination of foreshore areas. These documents include:

- Operation Policy 4.3: *Identifying and establishing waterways foreshore areas* (DoW 2012);
- Guidance Note 6: *Identifying and establishing waterways foreshore areas* (DoW 2013); and
- Water Note 23: *Determining foreshore reserves* (WRC 2001).

2.3.4 Environmental Guidance for Planning and Development

The purpose of Environmental Protection Authority (EPA) Guidance Statement No. 33 *Environmental Guidance for Planning and Development* (EPA, 2008) is to outline the significance of environmental factors and to provide the key definitions associated with the environmental factors. Ensuring that environmental factors are considered in line with the EPA's principals and objectives and within the planning framework is what this EAR is primarily targeted at. In particular, EPA Guidance Statement No. 33 aims to:

- Provide an overview to environmental protection processes and information;
- Describe the referral and environmental impact assessment process under Part IV of the EP Act; and
- Provide the EPA's position and advice on a range of environmental factors, outlining how to protect, conserve and enhance the environmental values.

2.4 City of Kalamunda

The City of Kalamunda has a number of Local Planning Policies (LPPs) that detail the Shire's expectations with regard to managing the environment during planning and development as well as the factors that need to be considered throughout the planning process. Key LPPs and other guidelines that are applicable to the site and the environmental values within the site are outlined below:

- City of Kalamunda *Local Planning Scheme No.3* (WAPC, 2007) which requires Structure planning for the precinct to include:

    1. *A structure plan is to be prepared and approved for the land pursuant to Part 4 of the deemed provisions and is to specifically address:*

(a) *Traffic management including:*
   - *Provision of future vehicular access to be primarily via Adelaide Street;*
   - *Ensuring any vehicular access to Kalamunda Road does not reduce existing levels of access for adjacent properties; and*
   - *Access for lots with frontage to Stirling Crescent being provided via an internal road only.*

(b) *Appropriate interface with existing residential development along Stirling Crescent including setbacks, landscaping, fencing and façade treatment provisions;*

(c) *The identification and protection of environmentally significant areas within the land through the provision of appropriate buffers; and*

(d) *The identified bushfire risk in accordance with State Planning Policy 3.7 and Guidelines for Planning in Bushfire Prone Areas.*

2. *Subdivision and / or development is to generally be in accordance with the approved structure plan.*

- City of Kalamunda *Local Biodiversity Strategy 2023-2030* (City of Kalamunda, 2023) which outlines the overarching management of Local Natural Areas and environmental assets in the City;
- City of Kalamunda Draft Local Planning Policy (LPP) 34 *Wetlands and Waterways* (City of Kalamunda, 2021) which outlines the planning considerations for wetlands and waterways. Relevant to the site the LPP requires the following;

3. *Waterway foreshore areas are determined by several biophysical characteristics that contribute to the health and function of the waterway ecosystem. The width of a waterway foreshore should therefore reflect the biophysical characteristics of the waterway.*

4. *Planning applications for proposals adjacent to waterways shall be accompanied by a biophysical assessment to determine an appropriate foreshore width, undertaken in accordance with the Department of Water's (now Department of Water and Environment Regulation) Operational Policy: Identifying and Establishing Waterway Foreshore Areas and the Water and Rivers Commission's (now Department of Water and Environment Regulation) Determining Foreshore Reserves.*

5. *The biophysical assessment shall be undertaken by a suitably qualified professional and shall include:*
   a) *The extent, type and condition of the riparian and terrestrial native vegetation associated with or influencing the waterway.*
   b) *Flood prone land and areas subject to waterway channel changes, including the floodway and flood fringe.*
   c) *Riverine landform (topography and geomorphology).*
   d) *Landforms, soil types and soil characteristics that influence the extent of foreshore vegetation, erosion and the movement of nutrients and contaminants (including acid sulfate soils).*
   e) *Aquatic and riparian flora and fauna and their habitat.*
   f) *Land use compatibility.*
   g) *Heritage - archaeological and ethnographic sites.*

h) *Mapping of biophysical features and proposed foreshore boundary over recent aerial imagery.*

i) *Justification as to the location and extent of the proposed foreshore boundary.*

6. *In the absence of a biophysical assessment, the City may agree to a conservative foreshore width that adequately protects and enhances the hydrological, ecological, and social values of the waterway. In determining a conservative foreshore width, the City may rely on recent, high-quality aerial imagery, as well as a site visit to ensure waterway values will be adequately protected and enhanced.*
7. *The foreshore width to a waterway shall not be less than 15 m in width, measured each side of the waterway, extending outwards from the high water line.*
8. *Permissible activities or actions as part of, or as a result of, development proposals within the waterway foreshore include:*
   a) *Rehabilitation of disturbed areas, including vegetation restoration, weed control and erosion control measures*
   b) *Retention of all native vegetation*
   c) *Passive recreation such as footpaths, where native vegetation is not adversely impacted*
   d) *Conservation fencing and gates to controlled undesired access.*

Local Planning Policy 34 also provides a guideline for buffer distance to wetlands as outlined in Table 1.

Table 1: Buffer Distances as per Draft LPP 34

Category	Wetland Management Category Objective (Hill *et al* 1996)	Buffer Distance (unless varied in accordance with Clause 6)
Geomorphic Wetland-Conservation Category Wetland	To preserve wetland (natural) attributes and functions.	50 m
Geomorphic Wetland-Resource Enhancement Wetland	To restore wetlands through maintenance and enhancement of wetland functions and attributes.	30 m
Geomorphic Wetland-Multiple Use Wetland	To use, develop and manage wetlands in the context of water, town, and environmental planning.	No buffer requirement.

Source: Draft LPP 34 City of Kalamunda, 2021

- City of Kalamunda Draft Local Planning Policy (LPP) 35 *Hatch Court Light Industrial Precinct* (City of Kalamunda, 2022) which provides guidance for progressing the development potential of the site.

3 EXISTING ENVIRONMENT

3.1 Land Use

3.1.1 Historic Land Use

A review of historical aerial photography shows a mixture of dry and wet areas. The earliest aerial photography available is from 1953 (Landgate, 2025a) and shows the site has heavily cleared and disturbed probably for grazing at this early date (Plate 1). Some native vegetation remains.

Plate 1: Aerial Photograph from 1953 (Landgate, 2025a)

In aerial photography from 1985 a creekline is apparent, running from east to west through the middle of the site. A drainage channel has been constructed through the creekline (Plate 2). The 1985 photograph also show that development of the Stirling Precinct is underway as well as construction on Lot 200 Kalamunda Road.

The photograph from 1995 shows further development on the site (Plate 3). Lot 200 Kalamunda Road was fully developed for hardstand in 2023 to 2024 (Plate 4).

Plate 2: Aerial Photograph from 1985 (Landgate, 2025a)

Plate 3: Aerial Photograph from 1995 (Landgate, 2025a)

Plate 4: Aerial Photograph from 2000 (Landgate, 2025a)

The site is not a known or suspected contaminated site as listed under the *Contaminated Sites Act 2003* (DWER, 2025a). There may be small areas of contamination that may require investigation and possibly remediation prior to development.

3.1.2 Surrounding Land Use

To the north and west of the site is developed industrial land and to the south and east are residential areas and a retirement village. Ollie Worrel Reserve is approximately 300m to the south and contains breeding habitat for birds.

3.2 Heritage

3.2.1 European Heritage

Heritage sites can be listed under the following lists/registers:

- World Heritage Sites;
- National Heritage Sites;
- Commonwealth Heritage Sites;
- Sites on the register of the National Estate;
- Sites on the Western Australian Heritage Council Register; and
- Sites listed in the City of Kalamunda Municipal Heritage Inventory List.

There are no listed Heritage Sites or Interim Heritage Sites on the site (National Map, 2025; Heritage Council of Western Australia, 2025; DCCEEW, 2025).

3.2.2 Aboriginal Cultural Heritage

There is part of a listed Aboriginal Cultural Heritage Site mapped on the site, Site ID 3719 Munday Swamp (Appendix 2). There is also a lodged Aboriginal Cultural Heritage Site ID 30039, Stirling Crescent Swamp. Lodged Aboriginal Cultural Heritage Sites are mapped from information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972.*

3.3 Topography

The site is predominantly low lying and flat ranging from 21.15m Australian Height Datum (AHD) in the south-east, 24m AHD in the north and 22m AHD in the north-east corner (Figure 2). The site rises gently from the south-east to the north-west (Figure 2).

3.4 Geomorphology and Soils

3.4.1 Geology

The site is located on the eastern side of the Swan Coastal Plain. The Swan Coastal Plain is generally flat and is approximately 20 to 30 kilometres wide, consisting of a series of geomorphic entities running parallel to the coastline. The site is mapped as being part of the Pinjarra Plain System (DPIRD, 2025). The Pinjarra Plain has successive layering of soils formed from erosion of material from the scarp and east of the scarp (van Gool, 1999).

The Pinjarra Plain System consists of broad low relief plain west of the foothills, comprising predominantly Pleistocene fluvial sediments and some Holocene alluvium associated with major current drainage systems (Bolland, 1998). The major soils are naturally poorly drained and many swamps occur (DPIRD, 2025).

3.4.2 Soils

The soil phases mapped on the site are:

- Pinjarra, Ya2 Phase (213Pj_Ya2) is located on plain and swamp margins with deep, poorly drained, grey siliceous sand overlying clay.
- Pinjarra, Phase Gf7 (213Pj_Gf7) is located on minor rises with deep, rapidly drained brownish, siliceous or bleached sands underlain by mottled yellow clay (DPIRD, 2025).

3.4.3 Land Degradation Risks

The Land Degradation Risk Categories of the soil phases mapped on the site are outlined in Table 2.

Table 2: Land Degradation Risk Categories

Soil Type	Water Erosion	Wind Erosion	Waterlogging	Flooding	Salinity risk
Pinjarra, Ya2 Phase	<3% of map unit has a high to extreme water erosion risk	50-70% of map unit has a high to extreme wind erosion risk	>70% of map unit has a moderate to very high risk	<3% of the map unit has a moderate to high hazard	3-10% of the map unit has a moderate to high hazard

Soil Type	Water Erosion	Wind Erosion	Waterlogging	Flooding	Salinity risk
Pinjarra, Phase Gf7	<3% of map unit has a high to extreme water erosion risk	>70% of map unit has a high to extreme wind erosion risk	10-30% of map unit has a moderate to very high risk	<3% of the map unit has a moderate to high hazard	<3% of the map unit has a moderate to high hazard

In summary, all of the soils on the site have a risk of wind erosion. There is a low risk associated with the soils of water erosion or flooding and only the Pinjarra phase has a risk of waterlogging and salinity.

3.4.4 Acid Sulphate Soils

Acid sulphate soils (ASS) are wetland soils and unconsolidated sediments that contain iron sulphides which, when exposed to atmospheric oxygen in the presence of water, form sulphuric acid. ASS form in protected low energy environments such as barrier estuaries and coastal lakes and commonly occurs in low-lying coastal lands such as Holocene marine muds and sands. When disturbed, these soils are prone to produce sulphuric acid and mobilise iron, aluminium, manganese and other heavy metals. The release of these reaction products can be detrimental to biota, human health and built infrastructure.

The ASS Risk on the site has been mapped by the Department of Water and Environmental Regulation (DWER) (Landgate, 2025b) as being Moderate to Low (<3m from the surface) over most of the site (areas in orange on Plate 5). The areas associated with the wetter areas of the site are mapped as having a High to Moderate risk (<3m from the surface) (areas in red on Plate 5).

Plate 5: Acid Sulphate Soils Risk Mapping

3.5 Flora and Vegetation

3.5.1 Previous Studies

Previous studies undertaken on the site include:

- A flora and vegetation survey of Lot 200 Kalamunda Road was undertaken by ENV Australia (2009).
- A review of the flora, vegetation and wetland values of Lot 200 by Mattiske Consulting Pty Ltd (2010).
- Wetland assessment of the eastern part of the creekline (PGV Environmental, 2012);
- A vegetation appraisal for the northern section of the site in 2014 (PGV Environmental, 2014).

3.5.2 Desktop Searches

Searches of the following databases were undertaken prior to the site survey:

- DBCA Threatened and Priority Flora Databases including the WA Herbarium database (WAHerb) and Threatened (Declared Rare) and Priority Flora Species List (TFPL) (Appendix 3) (DBCA, 2025) for a radius of 10 km (Search Reference: 10-0925FL) that provides a list of Threatened and Priority species recorded in the area;
- Atlas of Living Australia (ALA, 2025) (Appendix 4) which shows all species that have been recorded within a 10km radius of the site.
- The EPBC Act Protected Matters Search Tool (DCCEEW, 2024) (Appendix 5) which identifies species that are listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) that could potentially have habitat within a 5km radius of the site.
- DBCA Threatened and Priority Ecological Community Database (Appendix 6) for a radius of 10km that provides a list of Threatened and Priority ecological communities recorded in the area (DBCA, 2025b) (Search Reference: 65-0825EC).

3.5.3 Survey Methodology

A Reconnaissance Flora and Vegetation Survey of the site was undertaken by PGV on 7 July 2025 in accordance with the Environmental Protection Authority Technical Guidance: *Flora and Vegetation Surveys for Environmental Impact Assessment* (2016). The survey included a review of previous studies and a thorough site walkover.

3.5.4 Flora Database Search Results

The results of the database searches and their likelihood to occur on the site is outlined in Table 3. Many of the species identified are from the Perth Hills or claypan habitats and do not have habitat on the site.

None of the species identified have been previously recorded on the site and there are no species expected to occur on the site as there is no suitable habitat due to previous clearing of the site.

Conservation codes are in Appendix 7.

Table 5: Identified Significant Flora Species and Likelihood of Occurring on the Site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Caladenia huegelii	King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid	Critically Endangered	Endangered	The Grand Spider-orchid prefers deep grey-white sand usually associated with the Bassendean sand-dune system, however, rare plants have been known to extend into the Spearwood system (in which calcareous yellow sands dominate) in some areas (DEC, 2009a). This species generally does not survive in disturbed areas.	Highly Unlikely – the site is on the Pinjarra Plain
Calectasia cyanea	Blue Tinsel Lily	Critically Endangered	Critically Endangered	The Blue Tinsel Lily prefers white, grey or yellow sand or gravel. This species is restricted to Torndirrup National Park and Albany region of the South West Botanical Province (Barrett and Dixon, 2001).	No – species record in error – outside of species range
Calytrix breviseta subsp. *breviseta*	Swamp Starflower	Critically Endangered	Endangered	The Swamp Starflower occurs in sandy clay in swampy flats.	Highly Unlikely – not suitable habitat
Drakaea elastica	Glossy-leafed Hammer Orchid	Critically Endangered	Endangered	The Glossy-leafed Hammer Orchid prefers low-lying situations adjoining winter-wet swamps and grows on bare patches of sand within otherwise dense vegetation in low-lying areas alongside winter-wet swamps, typically in banksia (*Banksia menziesii*, *B. attenuata* and *B. ilicifolia*) woodland or spearwood (*Kunzea glabrescens*) thicket vegetation (DEC, 2009b).	Highly Unlikely – not suitable habitat
Eremophila nivea	Silky Eremophila	Critically Endangered	Endangered	Silky Eremophila occurs on sandy clay, clay loam on undulating plains, road verges.	No – species record in error – outside of species range
Eucalyptus x balanites	Cadda Road Mallee	Critically Endangered	Endangered	The Cadda Road Mallee prefers sandy soils with lateritic gravel.	Highly Unlikely – not lateritic habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Gastrolobium hamulosum	Hook-point Poison	Critically Endangered	Endangered	Hook-point Poison prefers sandy, often gravelly soils or clay and flats, slopes, ridges.	No – species record in error from 1844 – outside of species range
Grevillea maccutcheonii	McCutcheon's Grevillea	Critically Endangered	Endangered	McCutcheon's Grevillea prefers shallow soils over laterite, clay on seasonally inundated sites near Busselton.	No – species record in error – outside of species range
Grevillea thelemanniana	Spider Net Grevillea	Critically Endangered	Critically Endangered	Spider Net Grevillea occurs on sandy clay soil in flat seasonally wet damplands and limestone soils are associated with some of the sites (TSSC, 2018).	Highly Unlikely – not suitable habitat
Hemiandra rutilans	Sargents Snakebush, Colourful Snakebush	Critically Endangered	Endangered	Sargents Snakebush grows in yellow/grey sand and was originally collected at Sand Springs, south-west of York, which is now extinct. The most recent confirmed location was south of Dowerin where it grew in low Banksia prionotes woodland with *Eremaea pauciflora*, *Nuytsia floribunda* and *Verticordia densiflora* (DEC, 2008a).	No – species record in error from 1877 – outside of species range
Ptilotus pyramidatus	Pyramid Mulla-mulla	Critically Endangered	Critically Endangered	The Pyramid Mulla-mulla in known from one location and occurs on seasonally inundated flat (floodplain) with *Melaleuca acutifolia*, *Verticordia plumosa* var. *brachyphylla*, *Hypocalymma angustifolium*, *Meeboldii cana*, *Chorizandra enodis*, rushes, sedges and species-rich native annual herbs and geophytes (DPaW, 2016).	Highly Unlikely – not suitable habitat
Thelymitra dedmaniarum	Cinnamon Sun-orchid	Critically Endangered	Endangered	Cinnamon Sun-orchid is known from only two locations in the Gidgegannup area. It is confined to open wandoo woodland on red-brown sandy loam associated with dolerite and granite outcropping (DEC, 2012).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Thelymitra magnifica	Crystal Brook Star-orchid	Critically Endangered		The Crystal Brook Star-orchid occurs on stony ridges with granite outcrops (Brown et al., 2013)	Highly Unlikely – not suitable habitat
Thelymitra variegata	Queen of Sheba	Critically Endangered		The Queen of Sheba orchid grows on sandy clay, sand and laterite. The orchid is found in banksia and Jarrah woodland (Brown *et al*., 2013)	Highly Unlikely – not suitable habitat
Acacia denticulosa	Sandpaper Wattle	Endangered	Vulnerable	Sandpaper Wattle occurs in sand, loam, clay on granite outcrops, rarely on sandplains.	Highly Unlikely – not suitable habitat
Austrostipa bronweniae		Endangered	Endangered	*Austrostipa bronweniae* is recorded from wetlands seasonally waterlogged muddy sand with *Gahnia trifida*, *Actinostrobus pyramidalis*, *Grevillea thelemanniana*, *Melaleuca viminea* subsp. *viminea* (Australian National Herbarium, 2009).	Unlikely – not typical habitat
Byblis gigantea	Rainbow Plant	Endangered		The Rainbow Plant occurs in sandy-peat swamps in seasonally wet areas.	Highly Unlikely – not suitable habitat
Darwinia apiculata	Scarp Darwinia	Endangered	Endangered	The Scarp Darwinia grows in lateritic soils.	Highly Unlikely – not suitable habitat
Diplolaena andrewsii	Native Wild Rose	Endangered	Endangered	The Native Wild Rose occurs on loam, clay in association with granite outcrops and hillsides.	No – species record in error – outside of species range
Diuris drummondii	Tall Donkey Orchid	Endangered	Vulnerable	The Tall Donkey Orchid grows in low-lying depressions in peaty and sandy clay swamps (DEC, 2008), in areas that contain surface water well into summer (Brown *et al*., 2013).	Highly Unlikely – not suitable habitat
Diuris purdiei	Purdie's Donkey-orchid	Endangered	Endangered	Purdie's Donkey Orchid occurs in grey-black sand in moist winter-wet swamps with winter inundation in dense heath with scattered trees and amongst native sedges and dense heath with scattered emergent *Melaleuca preissiana*, *Corymbia calophylla*, *E. marginata* and *Nuytsia floribunda*.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Drakaea micrantha	Dwarf Hammer-orchid	Endangered	Vulnerable	Dwarf Hammer-orchid usually occurs on cleared fire breaks or open sandy patches in Banksia, Jarrah and Sheoak woodlands or forest and often found under Spearwood thickets.	Unlikely – not typical habitat
Eremophila glabra subsp. *chlorella*		Endangered	Endangered	*Eremophila glabra* subsp. *chlorella* occurs in sandy clay in winter-wet depressions associated with *Casuarina obesa*, *Viminaria juncea, Melaleuca lateritia, M. acutifolia, M. rhaphiophylla, M. viminea, M. teretifolia, M. brevifolia, Chorizandra enodis, Eucalyptus wandoo, E. loxophleba*, *Acacia saligna, A. microbotrya, Banksia telmatiaea, B. nivea* subsp. *nivea*, *Regelia ciliata, Petrophile seminuda, Verticordia densiflora* var. *densiflora* and *Calothamnus hirsutus* (DPaW, 2016).	Highly Unlikely – not suitable habitat
Grevillea curviloba	Narrow curved-leaf Grevillea	Endangered	Endangered	Narrow curved-leaf Grevillea prefers sand, sandy loam in winter-wet heath.	Highly Unlikely – not suitable habitat
Lepidosperma rostratum	Beaked Lepidosperma	Endangered	Endangered	Beaked Lepidosperma is found in peaty sand, clay associated with *Banksia telmatiaea* and *Calothamnus hirsutus*.	Highly Unlikely – not suitable habitat
Macarthuria keigheryi	Keighery's Macarthuria	Endangered	Endangered	Keighery's Macarthuria prefers white or grey sand on low-lying winter-wet damp sands growing among heathland, Jarrah and Sheoak/Banksia woodland and Banksia/Eucalypt Woodland (DEC, 2008b).	Highly Unlikely – not suitable habitat
Thelymitra stellata	Star Sun-orchid	Endangered	Endangered	The Star Sun-orchid grows in gravelly loam among low heath and scrub in *Eucalyptus marginata* (Jarrah) and *E. wandoo* (Wandoo) woodland, and in low heath on lateritic hill tops.	Highly Unlikely – not suitable habitat
Trithuria occidentalis	Swan Hydatella	Endangered	Endangered	Swan Hydatella grows partly submerged on the edge of shallow, winter-wet claypans in very open shrubland of Robin Redbreast Bush (*Melaleuca lateritica*) and numerous annual herbs.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Acacia anomala	Grass Wattle, Chittering Grass Wattle	Vulnerable	Vulnerable	The Grass Wattle prefers lateritic soils and slopes.	Highly Unlikely – not suitable habitat
Acacia aphylla	Leafless Rock Wattle	Vulnerable	Vulnerable	Leafless Rock Wattle occurs in sand, loam, clay loam on granite outcrops, hills.	Highly Unlikely – not suitable habitat
Andersonia gracilis	Slender Andersonia	Vulnerable	Endangered	Slender Andersonia occurs in white/grey sand, sandy clay, gravelly loam in winter-wet areas, near swamps. Vegetation type is low open heath with shrubs over sedges (DEC, 2006).	Highly Unlikely – not suitable habitat
Anigozanthos viridis subsp. *terraspectans*	Dwarf Green Kangaroo Paw	Vulnerable	Vulnerable	The Dwarf Green Kangaroo Paw occurs on grey sand, clay loam in winter-wet depressions.	No – outside of species range
Anthocercis gracilis	Slender Tailflower	Vulnerable	Vulnerable	Slender Tailflower occurs in sandy or loamy soils near granite outcrops.	Highly Unlikely – not suitable habitat
Banksia mimica	Summer Honeypot	Vulnerable	Endangered	Summer Honeypot prefers white or grey sand over laterite, sandy loam.	Highly Unlikely – not suitable habitat
Boronia adamsiana	Barbalin Boronia	Vulnerable	Vulnerable	Barbalin Boronia occurs in yellow sand/loam over laterite on flats, road verges.	No – species record in error from 1889 – outside of species range
Chamelaucium lullfitzii	Gingin Wax	Vulnerable	Endangered	Gingin wax is restricted to a very small area associated with the Gingin scarp, south of Gingin where plants grow on white, grey, or yellow sands in low open banksia woodland (Marchant, 2019).	Highly Unlikely – not suitable habitat
Conospermum undulatum	Wavy-leaved Smokebush	Vulnerable	Vulnerable	Wavy-leaved Smokebush occurs on sand and sandy clay soils, often over laterite, on flat or gently sloping sites between the Swan and Canning Rivers with a few records from slightly swampy habitat (DEC, 2009c).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Diuris micrantha	Dwarf Bee-orchid	Vulnerable	Vulnerable	The Dwarf Bee-orchid is usually found on brown loamy clay in winter-wet swamps, in shallow water.	Highly Unlikely – not suitable habitat
Eleocharis keigheryi	Keighery's Eleocharis	Vulnerable	Vulnerable	Keighery's Eleocharis occurs in clay, sandy loam and is emergent in freshwater: creeks, claypans.	Highly Unlikely – not suitable habitat
Gastrolobium lehmannii	Cranbrook Pea	Vulnerable	Vulnerable	The Cranbrook Pea occurs in red clay, laterite on low hilltop of breakaway.	No – record in error – outside of species range
Grevillea flexuosa	Zig Zag Grevillea	Vulnerable	Vulnerable	Zig Zag Grevillea occurs in red-brown sand with laterite and gravel, sand over granite on ridgetop plateaus and associated breakaways.	Highly Unlikely – not suitable habitat
Morelotia australiensis (Listed as *Tetraria australiensis*)	Southern Tetraria	Vulnerable	Vulnerable	Southern Tetraria occurs in grey sand over clay; also described as yellow and sandy or clayey lateritic soils favouring winter-wet swampy depressions, drainage lines or rises surrounding swamps.	Unlikely – not typical habitat
Ptychosema pusillum	Dwarf Pea	Vulnerable	Vulnerable	Dwarf Pea occurs in sand on rises.	No – record in error – outside of species range
Ricinocarpos trichophorus	Barrens Wedding Bush	Vulnerable	Endangered	Barrens Wedding Bush grows in sandy clay, loam on breakaways, among sandstone rocks.	No – record in error – outside of species range
Amanita quenda	Quenda lepidella	Priority 1		Quenda lepidella are solitary or scattered, in moist sandy soil in wetland vegetation (Davidson *et al*., 2015).	Unlikely – not typical habitat
Bolboschoenus fluviatilis	River Bulrush	Priority 1		River Bulrush occurs on the margins of wetlands and rivers.	Unlikely – not typical habitat
Boronia humifusa		Priority 1		*Boronia humifusa* grows in gravelly clay loam over laterite in Jarrah-marri open forest.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Calandrinia sp. Bayswater (C. Andrews s.n. 11/1902)		Priority 1		*Calandrinia* sp. Bayswater is known from Bayswater growing in grey sand over sand.	Highly Unlikely – not suitable habitat
Drosera paleacea	Dwarf Sundew	Priority 1		Dwarf Sundew occurs in white sand, sandy clay.	No – record in error – occurs near Albany
Drosera patens		Priority 1		*Drosera patens* occurs in sandy soils on the margins of winter-wet depressions, swamps and lakes.	Unlikely – not typical habitat
Drosera x sidjamesii		Priority 1		*Drosera x sidjamesii* grows in peaty sand along lake margins, close to winter high-water line.	Highly Unlikely – not suitable habitat
Hydrocotyle striata		Priority 1		*Hydrocotyle striata* occurs in clay near springs.	Highly Unlikely – not suitable habitat
Korthalsella leucothrix	Jointed Mistletoe	Priority 1		Jointed Mistletoe occurs on *Acacia acuminata* and *A. craspedocarpa*.	No – record in error – outside of species range
Levenhookia preissii	Preiss's Stylewort	Priority 1		Preiss's Stylewort occurs in grey or black peaty sands in swamps.	Highly Unlikely – not suitable habitat
Senecio gilbertii		Priority 1		Senecio gilbertii grows in peaty sand near swamps on slopes.	Highly Unlikely – not suitable habitat
Acacia benthamii		Priority 2		*Acacia benthamii* grows on sand, typically on limestone breakaways	Highly Unlikely – not limestone habitat
Calectasia grandiflora	Blue Tinsel Lily	Priority 2		Blue Tinsel Lily occurs in white, grey or yellow sand, sandy clay, gravel, laterite and granite in swampy areas, rock outcrops, flats, slopes and ridges.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Calymperastrum latifolium		Priority 2		*Calymperastrum latifolium* is recorded from a shaded *Macrozamia* stem on a large rocky outcrop (Western Australian Herbarium, 1994).	No – no host plants on the site
Commersonia sp. Lesmurdie (A.A. Mitchell 11429)		Priority 2		*Commersonia* sp. Lesmurdie is recorded from sloping seepage with brown cracking clay soil on basalt sill (Western Australian Herbarium, 2022).	Highly Unlikely – not suitable habitat
Johnsonia pubescens subsp. *cygnorum*		Priority 2		Johnsonia pubescens subsp. cygnorum occurs on grey-white-yellow sand often overlying clays in Jarrah/Banksia woodland (Keighery, 2001) on flats on seasonally-wet sites	Highly Unlikely – not suitable habitat
Lepyrodia curvescens		Priority 2		*Lepyrodia curvescens* occurs in sand, laterite in seasonally inundated swampland.	Highly Unlikely – not suitable habitat
Leucopogon sp. Busselton (D. Cooper 243)		Priority 2		*Leucopogon* sp. Busselton is recorded from a seasonal dampland in seasonally wet, white sand (Western Australian Herbarium, 2011).	Highly Unlikely – not suitable habitat
Petrophile carduacea		Priority 2		Petrophile carduacea occurs in gravelly soils.	No – record in error – occurs in the Stirling Range
Poranthera moorokatta		Priority 2		*Poranthera moorokatta* grows in white silica sand and has been recorded in Banksia woodland and in a shallow dampland (Barrett, 2012).	Highly Unlikely – not suitable habitat
Scaevola paludosa		Priority 2		Scaevola paludosa prefers sandy soils.	No – record in error – occurs near Esperance
Stylidium falcatum	Slender Beaked Triggerplant	Priority 2		Slender Beaked Triggerplant occurs in sand, gravelly clay loam on plains, lateritic ridges.	No – record in error – occurs near Albany

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Thomasia brachystachys		Priority 2		*Thomasia brachystachys* occurs in littered, organic brown soil in high, open or dense forests.	No – record in error – occurs in the Stirling Range
Acacia drummondii subsp. *affinis*		Priority 3		*Acacia drummondii* subsp. *affinis* grows in lateritic gravelly soils.	Highly Unlikely – not suitable habitat
Acacia horridula		Priority 3		*Acacia horridula* grows in gravelly soils over granite, sand on rocky hillsides.	Highly Unlikely – not suitable habitat
Acacia oncinophylla subsp. *oncinophylla*		Priority 3		*Acacia oncinophylla* subsp. *oncinophylla* occurs in granitic soils	Highly Unlikely – not suitable habitat
Allocasuarina grevilleoides		Priority 3		*Allocasuarina grevilleoides* grows in sand over laterite, gravel.	Highly Unlikely – not suitable habitat
Amanita carneiphylla	Miller's Pink-Gilled Lepidella	Priority 3		Miller's Pink-Gilled Lepidella is a deeply rooting species and grows in sandy soil with *Eucalyptus*, *Banksia*, and *Allocasuarina* and at one site, Mediterranean *pine* (Pinus) was also found (Tulloss, 2022).	Highly Unlikely – not suitable habitat
Amanita drummondii	Drummond's Grisette	Priority 3		Drummond's Grisette is solitary to gregarious in leaf litter in association with *Agonis flexuosa, A. theiformis, Allocasuarina fraseriana, Corymbia calophylla, Eucalyptus marginata, E. patens, E. staeri, Jacksonia furcellata, Kunzea glabrescens, Melaleuca sp., Podocarpus drouynianus, Taxandria parviceps*. (Davidson *et al*., 2015) growing in sandy soil (Amanitaceae Org, 2015).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Amanita fibrillopes	Peach Amanita	Priority 3		Peach Amanita is recorded from sandy or gravelly soil in dry sclerophyll forest and Banksia woodland, or in humus rich soil in seasonally wet eucalypt and paperbark woodland, often associated with *Eucalyptus marginata, E. jacksonii, Allocasuarina fraseriana, Corymbia calophylla, Melaleuca preissiana* and *Agonis* sp. (Davison *et al*., 2013).	Highly Unlikely – not suitable habitat
Amanita kalamundae	Kalamunda Lepidella	Priority 3		Kalamunda Lepidella is found In deep litter under *Eucalyptus patens* and *Agonis eriofolia* (Amanitaceae Org, 2018).	Highly Unlikely – not suitable habitat
Amanita preissii	Cinnamon-ring Lepidella	Priority 3		Cinnamon-ring Lepidella is found under shrubs and Eucalyptus in West Australia (Amanitaceae Org, 2015) in sandy soil and lateritic gravel, associated with *Allocasuarina fraseriana, Acacia pulchella, Corymbia calophylla, Callitris sp., Eucalyptus gomphocephala, E. marginata, Macrozamia fraseri* and *Pinus pinaster* (Davidson *et al.,* 2017).	Highly Unlikely – not suitable habitat
Angianthus drummondii		Priority 3		*Angianthus drummondii* grows in grey or brown clay soils, ironstone on seasonally wet flats.	Highly Unlikely – not suitable habitat
Angianthus micropodioides		Priority 3		*Angianthus micropodioides* occurs in saline sandy soils on river edges, saline depressions, claypans.	Highly Unlikely – not suitable habitat
Asteridea gracilis		Priority 3		Asteridea gracilis prefers sand, clay, gravelly soils.	Highly Unlikely – not suitable habitat
Babingtonia urbana	Coastal Plain Babingtonia	Priority 3		Coastal Plain Babingtonia occurs in orange sand, brown loam, white sandy clay on low flats, winter-wet swamps.	Highly Unlikely – not suitable habitat
Banksia pteridifolia subsp. *vernalis*		Priority 3		*Banksia pteridifolia* subsp. *vernalis* occurs in white/grey sand over laterite.	Unlikely – not typical habitat
Beaufortia purpurea	Purple Beaufortia	Priority 3		Purple Beaufortia occurs in lateritic or granitic soils on rocky slopes.	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Carex tereticaulis		Priority 3		Carex tereticaulis prefers black peaty sand.	Highly Unlikely – not peaty habitat
Chamaescilla gibsonii		Priority 3		*Chamaescilla gibsonii* grows in clay to sandy clay on winter-wet flats, shallow water-filled claypans.	Highly Unlikely – not claypan habitat
Comesperma rhadinocarpum	Slender-fruited Comesperma	Priority 3		Slender-fruited Comesperma occurs in sandy soils	Unlikely – not typical habitat
Conostylis bracteata		Priority 3		Conostylis bracteata occurs in sand, limestone on consolidated sand dunes.	Highly Unlikely – not dune habitat
Cupaniopsis anacardioides	Tuckeroo	Priority 3		Tuckeroo occurs in vine thickets.	No – record in error – occurs in the Kimberley
Cyathochaeta teretifolia		Priority 3		*Cyathochaeta teretifolia* occurs in grey sand, sandy clay on swamps, creek edges.	Unlikely – not typical habitat
Dampiera sericantha		Priority 3		*Dampiera sericantha* occurs in sand, sometimes with gravel on plains.	No – record in error – occurs in on the south coast
Dampiera triloba		Priority 3		*Dampiera triloba* grows in loamy sand (Australian National Herbarium, 2009) in lower lying areas.	Unlikely – not typical habitat
Dillwynia dillwynioides		Priority 3		*Dillwynia dillwynioides* occurs in sandy soils in winter-wet depressions.	Highly Unlikely – not suitable habitat
Eryngium subdecumbens		Priority 3		*Eryngium subdecumbens* grows in clay, grey sand on seasonally wet flats, claypans, swamps.	Highly Unlikely – not claypan habitat
Grevillea dissectifolia		Priority 3		*Grevillea dissectifolia* occurs in gravelly loam in moist areas and on roadsides.	Highly Unlikely – not suitable habitat
Haemodorum loratum		Priority 3		*Haemodorum loratum* prefers grey or yellow sand, gravel.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Halgania corymbosa		Priority 3		*Halgania corymbosa* prefers gravelly soils, soils over granite.	Highly Unlikely – not suitable habitat
Isopogon autumnalis	Autumn Isopogon	Priority 3		Autumn Isopogon occurs in white, grey or yellow sand, often over laterite.	Unlikely – not typical habitat
Jacksonia gracillima		Priority 3		*Jacksonia gracillima* occurs in grey and brown well-drained sand.	Highly Unlikely – not suitable habitat
Lasiopetalum glutinosum subsp. *glutinosum*		Priority 3		*Lasiopetalum glutinosum* subsp. *glutinosum* occurs in lateritic and granitic soils.	Highly Unlikely – not suitable habitat
Lasiopetalum membranaceum		Priority 3		*Lasiopetalum membranaceum* grows in sand over limestone.	Highly Unlikely – not limestone habitat
Meionectes tenuifolia		Priority 3		*Meionectes tenuifolia* occurs on swamp margins on seasonally wet poorly drained flats or granite flats in shallow soils.	Highly Unlikely – not suitable habitat
Myriophyllum echinatum		Priority 3		*Myriophyllum echinatum* grows in clay on winter-wet flats.	Highly Unlikely – not clay habitat
Pimelea calcicola		Priority 3		Pimelea calcicola occurs in sand on coastal limestone ridges.	Highly Unlikely – not limestone habitat
Pithocarpa corymbulosa	Corymbose Pithocarpa	Priority 3		Corymbose Pithocarpa occurs in gravelly or sandy loam amongst granite outcrops.	Highly Unlikely – not clay habitat
Platysace ramosissima		Priority 3		*Platysace ramosissima* prefers sandy soils over limestone.	Highly Unlikely – not limestone habitat
Schoenus benthamii		Priority 3		*Schoenus benthamii* prefers white, grey sand, sandy clay in winter-wet flats, swamps.	Unlikely – not typical habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Schoenus capillifolius		Priority 3		*Schoenus capillifolius* grows in brown mud on claypans.	Highly Unlikely – not claypan habitat
Sporobolus blakei		Priority 3		*Sporobolus blakei* grows in red sandy clay, loam associated with creeks.	Unlikely – not typical habitat
Stackhousia sp. Red-blotched corolla (A. Markey 911)		Priority 3		*Stackhousia* sp. Red-blotched corolla is recorded from light brown yellow silty-gravel, with surface granite and lateritic gravel and cobbels, on a very steep slope (Western Australian Herbarium, 1996)	Highly Unlikely – not suitable habitat
Stylidium aceratum		Priority 3		*Stylidium aceratum* occurs in sandy soils in swamp heathland.	Highly Unlikely – not suitable habitat
Stylidium paludicola		Priority 3		*Stylidium paludicola* prefers peaty sand over clay in winter wet habitats in Marri and Melaleuca woodland, Melaleuca shrubland.	Highly Unlikely – not peaty habitat
Styphelia filifolia		Priority 3		*Styphelia filifolia* occurs in sandy soils of the coastal plain (with one known occurrence from the northern Darling Scarp), usually in Banksia or Jarrah woodland and in low-lying situations (Hislop and Lelièvre, 2017).	Unlikely – not typical habitat
Thysanotus anceps		Priority 3		*Thysanotus anceps* grows on white or grey sand, lateritic gravel, laterite.	Highly Unlikely – not lateritic habitat
Tricostularia drummondii	Drummond's Tricostularia	Priority 3		Drummond's Tricostularia grows in low woodland or mallee over sand or laterite, on flats, rises or sometimes in swampy areas (Barrett *et al*., 2021).	Unlikely – not typical habitat
Acacia oncinophylla subsp. *patulifolia*		Priority 4		*Acacia oncinophylla* subsp. *patulifolia* occurs on granitic soils, occasionally on laterite.	Highly Unlikely – not suitable habitat
Aponogeton hexatepalus	Stalked Water Ribbons	Priority 4		Stalked Water Ribbons grow in freshwater: ponds, rivers, claypans	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Calothamnus accedens		Priority 4		*Calothamnus accedens* occurs in sandy soils over laterite on road verges.	Highly Unlikely – not suitable habitat
Cyanothamnus tenuis	Blue Boronia	Priority 4		Blue Boronia prefers laterite, stony soils, granite.	Highly Unlikely – not suitable habitat
Darwinia pimelioides		Priority 4		*Darwinia pimelioides* prefers loam, sandy loam on granite outcrops.	Highly Unlikely – not suitable habitat
Dodonaea hackettiana	Hackett's Hopbush	Priority 4		Hackett's Hopbush occurs in sand with outcropping limestone.	Highly Unlikely – not limestone habitat
Drosera occidentalis	Western Sundew	Priority 4		The Western Sundew occurs in sandy and clayey soils in swamps and wet depressions.	Highly Unlikely – not suitable habitat
Grevillea pimeleoides		Priority 4		*Grevillea pimeleoides* grows in gravelly soils over granite on rocky hillsides.	Highly Unlikely – not suitable habitat
Hydrocotyle lemnoides	Aquatic Pennywort	Priority 4		Aquatic Pennywort occurs in swamps	Highly Unlikely – not suitable habitat
Jacksonia sericea	Waldjumi	Priority 4		Waldjumi grows in calcareous and sandy soils.	Highly Unlikely – not calcareous habitat
Lasiopetalum bracteatum	Helena Velvet Bush	Priority 4		Helena Velvet Bush occurs in sandy clay, clay, lateritic gravel along drainage lines, creeks, gullies, granite outcrops.	Highly Unlikely – not suitable habitat
Microtis quadrata	South Coast Mignonette Orchid	Priority 4		South Coast Mignonette Orchid occurs on clay based coastal flats (Brown *et al*., 2013).	Highly Unlikely – not suitable habitat
Ornduffia submersa		Priority 4		Ornduffia submersa grows in freshwater 0.05-0.6 m deep in pools, lakes, swamps, winter-wet depressions, claypans.	Highly Unlikely – not suitable habitat
Pimelea rara	Summer Pimelea	Priority 4		Summer Pimelea occurs in lateritic soils.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Schoenus griffinianus		Priority 4		*Schoenus griffinianus* grows in white sand in low heath (Wilson, 1997).	Highly Unlikely – not suitable habitat
Senecio leucoglossus		Priority 4		*Senecio leucoglossus* prefers gravelly lateritic or granitic soils with granite outcrops on slopes.	Highly Unlikely – not suitable habitat
Stylidium longitubum	Jumping Jacks	Priority 4		Jumping Jacks prefer sandy clay, clay in seasonal wetlands.	Highly Unlikely – not clay habitat
Thysanotus glaucus		Priority 4		*Thysanotus glaucus* occurs in white, grey or yellow sand, sandy gravel.	Unlikely – not typical habitat
Verticordia lindleyi subsp. *lindleyi*		Priority 4		*Verticordia lindleyi* subsp. *lindleyi* prefers sand, sandy clay in winter-wet depressions.	Highly Unlikely – not suitable habitat

* sourced from Florabase as well as the DBCA database searches unless otherwise denoted

3.5.5 TEC/PEC Database Search

A search of DBCA's Threatened (TEC) and Priority Ecological Communities (PEC) database identified six TECs and seven PECs (Appendix 5) as having been recorded within 10km of the site. Two of the PECs are part of a Federally listed TEC. The communities identified in the database searches are outlined in Table 4.

Table 4: TEC and PECs Identified in Database Search

Number	Description	Conservation Status in Western Australia	Status under the EPBC Act
SCP02	Southern wet shrublands, Swan Coastal Plain (floristic community type 2 as originally described in Gibson et al. 1994)	Critically Endangered	
SCP3a	*Corymbia calophylla - Kingia australis* woodlands on heavy soils (floristic community type 3a as originally described in Gibson et al. 1994)	Critically Endangered	Endangered
SCP3b	*Corymbia calophylla - Eucalyptus marginata* woodlands on sandy clay soils of the southern Swan Coastal Plain (floristic community type 3b as originally described in Gibson et al. 1994)	Endangered	
SCP3c	*Corymbia calophylla - Xanthorrhoea preissii* woodlands and shrublands, Swan Coastal Plain (floristic community type 3c as originally described in Gibson et al. 1994)	Endangered	Endangered
SCP20a	*Banksia attenuata* woodlands over species rich dense shrublands (floristic community type 20a as originally described in Gibson et al. 1994)	Critically Endangered	Endangered as part of the Banksia WL SCP
SCP20c	Shrublands and woodlands of the eastern side of the Swan Coastal Plain (floristic community type 20c as originally described in in Gibson et al. 1994)	Critically Endangered	Endangered
SCP07	Herb rich saline shrublands in clay pans (floristic community type 7 as originally described in Gibson et al. 1994)	Endangered	Critically Endangered as part of the Herb Rich Saline Shrublands in Clay Pans
SCP08	Herb rich shrublands in clay pans (floristic community type 8 as originally described in Gibson et al. 1994)	Endangered	Critically Endangered as part of the Herb Rich Saline Shrublands in Clay Pans
SCP10a	Shrublands on dry clay flats (floristic community type 10a as originally described in Gibson et al. 1994)	Endangered	Critically Endangered

Number	Description	Conservation Status in Western Australia	Status under the EPBC Act
Muchea Limestone	Shrublands and woodlands on Muchea Limestone of the Swan Coastal Plain	Endangered	Endangered
SCP21c	Low lying *Banksia attenuata* woodlands or shrublands	Priority 3	Endangered as part of the Banksia WL SCP
Banksia WL SCP	Banksia Woodlands of the Swan Coastal Plain ecological community	Priority 3	Endangered
Coastal Saltmarsh	Subtropical and Temperate Coastal Saltmarsh	Priority 3	Vulnerable
Central Granite Shrublands (Com 5, Markey)	Central Northern Darling Scarp Granite Shrubland Community	Priority 4	

The Banksia Woodland TEC is mapped on the site over an area that is mapped as *Eucalyptus rudis* Woodland to Low Forest over *Melaleuca rhaphiophylla* Low Forest over Arum Lily which is not representative of the TEC and therefore the mapping is in error.

3.5.6 Flora

No Threatened or Priority flora species have been recorded on the site and none were recorded during the Reconnaissance survey. A low number of native species were recorded on the site including:

- *Eucalyptus rudis* (Flooded Gum);
- *Melaleuca rhaphiophylla* (Paperbark);
- *Astartea fascicularis*;
- *Typha orientalis* (Bulrush);
- *Juncus pallidus* (Pale Rush);
- *Hypocalymma angustifolium* (Pink-flowered Myrtle);
- *Lepidosperma longitudinale* and
- *Dielsia stenostachya.*

Most of the trees on the site are planted exotic species.

Weed species recorded on the site included:

- *Arctotheca calendula* (Cape Weed);
- *Cenchrus clandestinus* (Kikuyu);
- *Conyza bonariensis* (Fleabane);
- *Cynodon dactylon* (Couch);
- *Eragrostis curvula* (African Lovegrass);
- *Holcus lanatus* (Yorkshire Fog grass);
- *Leptospermum laevigatum* (Victorian Teatree);

- *Moraea flaccida* (Cape Tulip);
- *Oxalis pes-caprae* (Soursob);
- *Paspalum dilatatum* (Paspalum);
- *Pelargonium capitatum* (Rose Pelargonium);
- *Rumex acetosella* (Sorrel);
- *Schinus terebinthifolia* (Brazilian Pepper trees);
- *Taraxacum officinale* (Dandelion);
- *Taraxacum officinale* (Dandelion);
- *Trifolium* sp. (Clover); and
- *Vicia sativa* (Common Vetch).

The creekline has a weedy understorey of:

- *Cenchrus clandestinus* (Kikuyu);
- *Zantedeschia aethiopica* (Arum Lily) – a Declared Pest and Weed of National Significance (WoNS);
- *Washingtonia filifera* (Cotton Palm);
- *Gomphocarpus fruticosus* (Cotton Bush), a Declared Pest; and
- *Arundo donax* (False Bamboo).

3.5.7 Vegetation Complex

Vegetation Complexes are a broad level of vegetation description which is based on the underlying geomorphology and rainfall (Heddle *et al*., 1980). The vegetation on the site is part of the Southern River Vegetation Complex (Heddle *et al.,* 1980). The Southern River Vegetation Complex is described as "open woodland of *Corymbia calophylla-Eucalyptus marginata-Banksia* species with fringing woodland of *Eucalyptus rudis-Melaleuca rhaphiophylla* along creek beds". This vegetation is too degraded to be a good example of this vegetation complex.

3.5.8 Vegetation Types

Five vegetation types have been described on the site in 2014 and the 2025. The vegetation previously recorded on Lot 200 Kalamunda Road, Lot 100 and Lot 9000 Adelaide Street has since been cleared from earlier observations. The remaining vegetation types are:

Cleared Areas that contain no, or very few, native plants and are vegetated by exotic species.

ErMr *Eucalyptus rudis* Woodland to Low Forest over *Melaleuca rhaphiophylla* Low Forest over Arum Lily.

Er *Eucalyptus rudis* Woodland to Low Forest over Pasture.

Mr *Melaleuca rhaphiophylla* Low Woodland over Typha and Arum Lily.

MrAf *Melaleuca rhaphiophylla/Astartea fascicularis* Thicket to Low Woodland (Figure 3).

3.5.9 Vegetation Condition

The condition of the vegetation was assessed according to the system devised by Keighery and described in Bush Forever (Government of Western Australia, 2000) (Table 5).

Table 5: Vegetation Condition Rating Scale

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Source: Government of Western Australia, 2000.

A large area of the site has been cleared for rural purposes or contains only introduced species and is Completely Degraded. The northern area is considered to be Degraded to Completely Degraded and consists of native trees over bare sand and weeds. The small eastern area of remnant vegetation associated with the RE wetland is considered to be in Degraded to Good Condition and consists of a native tree and sedge species with a number of weed species present. The western area of wetland vegetation is considered to be in Degraded Condition with native trees over weeds.

There is an abundance of the Declared Weed *Zantedeschia aethiopica* (Arum Lily) in the western area. In addition, the aggressive wetland species *Typha orientalis* (Bulrush) is abundant in the drainage line.

Vegetation condition is shown in Figure 4.

3.5.10 Conservation Significance of Flora and Vegetation

3.5.10.1 Flora

The were no conservation significant species that were deemed likely to be on the site. The overall poor condition of the vegetation suggests the potential for any of these species to occur is extremely low. All species identified are perennial species so would have been present during the reconnaissance survey.

3.5.10.2 Vegetation Association

The Southern River complex has 18.43% of its pre-European extent remaining, of which 1.37% is protected for conservation purposes (DBCA, 2018). The EPA considers that vegetation complexes with less than 10% remaining in constrained areas such as the Perth Metropolitan Region are regionally significant and that for these complexes there is a presumption that all areas of remnant native

vegetation where less than 10% remains will be retained and conserved. The 18.43% retention amount for the Southern River Complex is above the 10% target.

The vegetation on the site is too degraded to be a good representation of this vegetation complex.

3.5.10.3 Threatened and Priority Ecological Communities

There is no intact vegetation on the site and therefore no vegetation that is representative of a Threatened or Priority Ecological Community.

3.6 Fauna

3.6.1 Methodology

A Basic Fauna Survey was undertaken in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2020). Desktop studies were undertaken to identify habitats and potential threatened species that may occur on the site.

Searches of the following databases were undertaken prior to the site survey:

- Atlas of Living Australia (ALA, 2025) which shows all species that have been recorded within a 10km radius of the site (Appendix 2).
- The EPBC Act Protected Matters Search Tool (DCCEEW, 2025) (Appendix 3) which identifies species that are listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) that could potentially have habitat within a 5km radius of the site.

A site reconnaissance was conducted by PGV Environmental on 7 July 2025 to describe the fauna habitats on the site. Desktop studies were undertaken to identify habitats and potential threatened species that may occur on the site. The likelihood of the site providing habitat to identified conservation significant fauna species was determined.

3.6.2 Fauna Habitats

There are four fauna habitats on the site as follows:

- Upland Banksia sp. and Eucalyptus todtiana scattered over cleared understorey;
- Wetland with Melaleuca rhaphiophylla and Eucalyptus rudis over weedy understorey;
- Wetland with weeds; and
- Cleared paddocks with scattered exotic trees.

The cleared hardstand area is not considered to have any fauna habitat value.

Fauna habitat can be assessed using a number of factors including, the size of the habitat, the level of habitat connectivity, availability of specific resources (e.g., tree hollows) and overall vegetation quality. The habitat was assessed according to the categories in Table 6.

Table 6: Fauna Habitat Value

Habitat Value	Description
High Quality Fauna Habitat	These areas closely approximate the vegetation mix and quality that would have been in the area prior to any disturbance. The habitat has connectivity with other habitats and is likely to contain the most natural vertebrate fauna assemblage.

Habitat Value	Description
Very Good Fauna Habitat	These areas show minimal signs of disturbance (e.g., grazing, clearing, fragmentation, weeds) and generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be minimally affected by disturbance.
Good Fauna Habitat	These areas showed signs of disturbance (e.g., grazing, clearing, fragmentation, weeds) but generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be affected by disturbance.
Disturbed Fauna Habitat	These areas showed signs of significant disturbance. Many of the trees, shrubs and undergrowth are cleared. These areas may be in the early succession and regeneration stages. Areas may show signs of significant grazing, contain weeds or have been damaged by vehicle or machinery. Habitats are fragmented or have limited connectivity with other fauna habitats. Fauna assemblages in these areas are likely to differ significantly from what might be expected in the area had the disturbance not occurred.
Highly Degraded Fauna Habitat	These areas often have a significant loss of vegetation, an abundance of weeds, and a large number of vehicle tracks or are completely cleared. Limited or no fauna habitat connectivity. Faunal assemblages in these areas are likely to be significantly different to what might have been in the area pre-disturbance.

From: Coffey Environments, 2009

The quality of the fauna habitat on the site is also limited due to it being fragmented from other areas of native vegetation, the closest being Munday Swamp approximately 1km to the south-west. The scattered parkland trees are considered to be Highly Degraded Fauna Habitat due to the cleared understorey.

The wetland areas on the site containing native trees are considered to be Disturbed Fauna Habitat. The understorey consists completely of weeds apart from a small section in the eastern area containing *Lepidosperma longitudinale*. The eastern section has been invaded by Japanese Pepper trees and the western section contains an abundance of Arum Lily. The drainage line with weeds such as False Bamboo and Bulrushes is considered to be Highly Degraded Fauna Habitat due to the absence of any native flora species.

The cleared paddocks with scattered exotic trees on the site consist of Highly Degraded Fauna Habitat due to the significant loss of vegetation. The increased amounts of grass and weed species are likely to result in a high abundance of introduced fauna species such as House Mice and Black Rats. The drainage line is disturbed fauna habitat but provides habitat for some frog and waterbird species and there is anecdotal evidence that it supports a population of Oblong Turtles (*Chelodina oblonga*).

3.6.3 Conservation Significant Species

Outlined in Table 7 is a short description of the preferred habitat for each of the species that were identified in the database searches and their preferred habitats. The preferred habitat has been compared to the habitats on the site described above and the likelihood of each species to be present was determined. Species recorded in the database search results that live in the ocean or birds that are marine and pelagic have not been included in the assessment. No records are located on the site.

Table 7: Identified Significant Fauna Species and Likelihood of Occurring on the Site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Bettongia penicillata ogilbyi	Woylie, Brush-tailed Bettong	Critically Endangered	Endangered	The Woylie habitat types ranged from forest to grassland, coastal and inland. During the day the Woylie shelters under patches of dense undergrowth, logs and rock-cavities and occasionally in burrows.	Highly Unlikely – not suitable habitat and the site is too disturbed
Calidris ferruginea	Curlew Sandpiper	Critically Endangered	Critically Endangered	Curlew Sandpipers mainly occur on intertidal mudflats in sheltered coastal areas, such as estuaries, bays, inlets and lagoons, and also around non-tidal swamps, lakes and lagoons near the coast, and ponds in saltworks and sewage farms.	Highly Unlikely – not suitable habitat and the site is too disturbed
Cherax tenuimanus	Margaret River Hairy Marron	Critically Endangered	Critically Endangered	The Margaret River Hairy Marron occurs in fresh water in the Margaret River Area.	No – no suitable habitat
Numenius madagascariensis	Eastern Curlew	Critically Endangered	Critically Endangered	The Eastern Curlew is most commonly associated with sheltered coasts, especially estuaries, bays, harbours, inlets and coastal lagoons, with large intertidal mudflats or sandflats, often with beds of seagrass. Occasionally, the species occurs on ocean beaches (often near estuaries), and coral reefs, rock platforms, or rocky islets.	Highly Unlikely – not suitable habitat and the site is too disturbed
Pseudemydura umbrina	Western Swamp Tortoise	Critically Endangered	Critically Endangered	The Western Swamp Tortoise is restricted to very few wild populations. During winter and spring, the tortoises live in the water. This species is carnivorous feeding on insects, larvae and tadpoles (Burbidge and Kuchling, 1994). In the drier, hotter months they shelter under leaf litter and in holes and aestivate (sleep).	No – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Pseudocheirus occidentalis	Western Ringtail Possum, Ngwayir	Critically Endangered	Critically Endangered	The Western Ringtail Possum is a medium sized nocturnal marsupial. This species occurs in and near coastal Peppermint Tree (*Agonis flexuosa*) forest and Tuart (*Eucalyptus gomphocephala*) dominated forest with a Peppermint Tree understorey.	No – not suitable habitat
Botaurus poiciloptilus	Australasian bittern	Endangered	Endangered	The Australasian Bittern occurs mainly in densely vegetated freshwater wetlands and, rarely, in estuaries or tidal wetlands.	Highly Unlikely – not suitable habitat and the site is too disturbed
Leioproctus douglasiellus	A Short-tongued Bee	Endangered	Critically Endangered	The short-tongued bee species is only known from three locations within the Perth metropolitan area ranging from Cannington to Forrestdale. Specimens have been collected on two plant species, Goodenia filiformis and Anthotium junciforme (TSSC, 2013).	Highly Unlikely – no suitable host plants
Myrmecobius fasciatus	Numbat, Walpurti	Endangered	Endangered	Numbats occur in eucalypt forests and woodlands dominated by *Eucalyptus marginata*, *Corymbia calophylla* and *Eucalyptus wandoo*.	Highly Unlikely – not suitable habitat and the site is too disturbed
Rostratula australis	Australian Painted Snipe	Endangered	Endangered Marine/ Migratory	The Australian Painted Snipe has been recorded at wetlands in all states of Australia but is most common in eastern Australia. It generally inhabits shallow terrestrial freshwater (occasionally brackish) wetlands, including temporary and permanent lakes, swamps and claypans. It also uses inundated or waterlogged grassland or saltmarsh, dams, rice crops, sewage farms and bore drains. Typical sites include a cover of vegetation, including grasses.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Zanda baudinii	Baudin's Black Cockatoo	Endangered	Endangered	Baudin's Black-Cockatoo mainly occurs in eucalypt forests, especially Jarrah (Eucalyptus marginata), Marri (Corymbia calophylla), also Karri (Eucalyptus diversicolor) forest, often feeding in the understorey on proteaceous trees and shrubs, especially banksias (DAWE, 2022).	Possible intermittent visitor– limited habitat occurs on the site
Zanda latirostris	Carnaby's Black Cockatoo	Endangered	Endangered	Carnaby's Cockatoo is found in the south-west of Australia from Kalbarri through to Ravensthorpe. It has a preference for feeding on the seeds of Banksia, Hakea, Eucalyptus, Grevillea, Pinus and Allocasuarina spp. It is nomadic often moving toward the coast after breeding. It breeds in tree hollows that are 2.5 - 12m above the ground and have an entrance 23-30cm with a depth of 1-2.5m. Nesting mostly occurs in smooth-barked trees (e.g. Salmon Gum, Wandoo, Red Morrell) (DAWE, 2022).	Possible intermittent visitor– limited habitat occurs on the site
Calyptorhynchus banksii naso	Forest Red-tailed Black-Cockatoo	Vulnerable	Vulnerable	Forest Red-tailed Black Cockatoos frequent the humid to sub-humid south-west of Western Australia from Gingin in the north, to Albany in the south and west to Cape Leeuwin and Bunbury (DAWE, 2022). It nests in tree hollows with a depth of 1-5m, that are predominately Marri (Corymbia calophylla), Jarrah (Eucalyptus marginata) and Karri (Eucalyptus diversicolor) and it feeds primarily on the seeds of Marri (DAWE, 2022).	Possible intermittent visitor– limited habitat occurs on the site
Charadrius leschenaultii	Greater Sand Plover	Vulnerable	Vulnerable/ Marine/ Migratory	In Australasia, the Greater Sand Plover is almost entirely coastal, inhabiting littoral and estuarine habitats. They mainly occur on sheltered sandy, shelly or muddy beaches with large intertidal mudflats or sandbanks, as well as sandy estuarine lagoons.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Dasyurus geoffroii	Chuditch, Western Quoll	Vulnerable	Vulnerable	The Chuditch have been known to occupy a wide range of habitats including woodlands, dry sclerophyll forests, riparian vegetation, beaches and deserts. They are opportunistic feeders, and forage on the ground at night, feeding on invertebrates, small mammals, birds and reptiles.	Highly Unlikely –the site is too disturbed and surrounded by development
Leipoa ocellata	Mallee Fowl	Vulnerable	Vulnerable	Mallee fowl have been found in mallee regions of southern Australia from approximately the 26th parallel of latitude southwards in mallee bushland.	No – not mallee habitat
Macrotis lagotis	Bilby, Dalgyte, Ninu	Vulnerable	Vulnerable	The greater Bilby is a nocturnal omnivorous marsupial that shrub species, such as *Acacia kempeana* and *A. hilliana*, which have root-dwelling larvae that provide a constant food source for the Greater Bilby. They also utilise Spinifex hummocks which are quite uniform and discrete, providing runways between hummocks, enabling easier movement and foraging.	Highly Unlikely – species occurs in northern Australia
Setonix brachyurus	Quokka	Vulnerable	Vulnerable	Quokkas were originally very common on the Swan Coastal Plain, however, their distribution is now limited to Rottnest Island and a few isolated areas in the south-west of WA. On the mainland, they prefer densely vegetated areas around wetlands and streams, whereas on Rottnest Island they inhabit low scrubby coastal vegetation where water is not readily available year-round.	Highly Unlikely – not suitable habitat and the species is thought to be locally extinct
Sternula nereis nereis	Australian Fairy Tern	Vulnerable	Vulnerable	The Fairy Tern (Australian) nests on sheltered sandy beaches, spits and banks above the high tide line and below vegetation.	Highly Unlikely – not suitable
Westralunio carteri	Carter's Freshwater Mussel	Vulnerable	Vulnerable	Carter's Feshwater Mussel is South-West Western Australia's only freshwater mussel (Murdoch University & SERCUL, 2012). Carter's Freshwater Mussel occurs in freshwater streams, rivers, reservoirs and lakes (ICUN, 2015b) and is intolerant to dehydration for more than three days and salinity (Murdoch University & SERCUL, 2012).	No - not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Actitis hypoleucos	Common Sandpiper	Migratory	Marine/ Migratory	The Common Sandpiper is mostly found around muddy margins or rocky shores. Generally the species forages in shallow water and on bare soft mud at the edges of wetlands.	Highly Unlikely – not suitable habitat and the site is too disturbed
Apus pacificus	Fork-tailed Swift	Migratory	Marine/Migratory	The Fork-tailed Swift is almost exclusively aerial and is not known to breed in Australia. They are seen in inland plains but sometimes above foothills or in coastal areas. They often occur over cliffs and beaches and also over islands and sometimes well out to sea. They also occur over settled areas, including towns, urban areas and cities. Apus pacificus subsp. pacificus is the only subspecies to migrate to Australia.	Highly Unlikely – may fly overhead but unlikely to land
Arenaria interpres	Ruddy Turnstone	Migratory	Vulnerable/ Marine/ Migratory	The Ruddy Turnstone is mainly found on coastal regions with exposed rock coast lines or coral reefs. It also lives near platforms and shelves, often with shallow tidal pools and rocky, shingle or gravel beaches.	Highly Unlikely – not suitable habitat
Calidris acuminata	Sharp-tailed Sandpiper	Migratory	Vulnerable/ Marine/ Migratory	The Sharp-tailed Sandpiper prefers muddy edges of shallow fresh or brackish wetlands, with inundated or emergent sedges, grass, saltmarsh or other low vegetation.	Highly Unlikely – not suitable habitat and the site is too disturbed
Calidris melanotos	Pectoral Sandpiper	Migratory	Marine/ Migratory	The Pectoral Sandpiper prefers shallow fresh to saline wetlands and is found at coastal lagoons, estuaries, bays, swamps, lakes, inundated grasslands, saltmarshes, river pools, creeks, floodplains and artificial wetlands.	Highly Unlikely – not suitable habitat and the site is too disturbed

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Limosa lapponica	Bar-tailed Godwit	Migratory	Marine/ Migratory	The Bar-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays.	Highly Unlikely – not suitable habitat and the site is too disturbed
Limosa limosa	Black-tailed Godwit	Migratory	Endangered /Migratory/ Marine	The Black-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays. It is found often around beds of seagrass and, sometimes, in nearby saltmarsh.	Highly Unlikely – not suitable habitat and the site is too disturbed
Motacilla cinerea	Grey Wagtail	Migratory	Migratory/ Marine	The Grey Wagtail is mostly recorded in coastal areas in Western Australia (ALA, 2015) however is widespread. There is non-breeding habitat only in Australia and the species has a strong association with water, particularly rocky substrates along water courses but also lakes and marshes.	Highly Unlikely – the site is too disturbed
Pandion haliaetus	Osprey	Migratory	Marine/ Migratory	Ospreys occur in littoral and coastal habitats and terrestrial wetlands of tropical and temperate Australia and offshore islands. They feed on fish, especially mullet where available, and rarely take molluscs, crustaceans, insects, reptiles, birds and mammals.	Highly Unlikely – not suitable habitat
Plegadis falcinellus	Glossy Ibis	Migratory	Marine/Mig ratory	The Glossy Ibis is the smallest ibis known in Australia. This species preferred habitat for foraging and breeding are fresh water marshes at the edges of lakes and rivers, lagoons, flood-plains, wet meadows, swamps, reservoirs, sewage ponds, rice-fields and cultivated areas under irrigation but do not breed in South-west Western Australia.	Highly Unlikely – not suitable habitat and the site is too disturbed

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Pluvialis fulva	Pacific Golden Plover	Migratory	Marine/ Migratory	Pacific Golden Plovers usually occur on beaches, mudflats and sandflats (sometimes in vegetation such as mangroves, low saltmarsh such as *Sarcocornia*, or beds of seagrass) in sheltered areas including harbours, estuaries and lagoons, and also in evaporation ponds in salt works.	Highly Unlikely – not suitable habitat and the site is too disturbed
Pluvialis squatarola	Grey Plover	Migratory	Vulnerable/ Marine/ Migratory	Grey Plovers occur almost entirely in coastal areas, where they usually inhabit sheltered embayments, estuaries and lagoons with mudflats and sandflats, and occasionally on rocky coasts with wave-cut platforms or reef-flats, or on reefs within muddy lagoons.	Highly Unlikely – not suitable habitat
Tringa nebularia	Common Greenshank	Migratory	Endangered /Marine/ Migratory	The Common Greenshank is a wader and does not breed in Australia. This species can be found in many types of wetlands and has the widest distribution of any shorebird in Australia. This species typically feeds on molluscs, crustaceans, insects, and occasionally fish and frogs.	Highly Unlikely –the site is too disturbed
Xenus cinereus	Terek Sandpiper	Migratory	Vulnerable/ Marine/ Migratory	The Terek Sandpiper mostly forages in the open, on soft wet intertidal mudflats or in sheltered estuaries, embayments, harbours or lagoons. The species has also been recorded on islets, mudbanks, sandbanks and spits, and near mangroves and occasionally in samphire (Halosarcia spp.).	Highly Unlikely – not suitable habitat and the site is too disturbed
Ardea alba	Great Egret, White Egret		Marine	The Eastern Great Egret has been reported in a wide range of wetland habitats and usually frequents shallow waters. This species feeds on fish, insects, crustaceans, molluscs, frogs, lizards, snakes and small birds and mammals.	Highly Unlikely –the site is too disturbed

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Bubulcus ibis	Cattle Egret		Marine	The Cattle Egret occurs in tropical and temperate grasslands, wooded lands and terrestrial wetlands with breeding in Western Australia recorded in the far north in Wyndham in colonies in wooded swamps such as mangrove forest. This species forages away from water on low lying grasslands, improved pastures and croplands generally in areas that have livestock eating insects, frog, lizards and small mammals.	Highly Unlikely – the site is too disturbed
Egretta sacra	Eastern Reef Egret, Eastern Reef Heron		Marine	The Eastern Reef Egret nests in trees in island woodlands, or on the ground under shrubs or rock ledges and feeds on small fish, crustaceans and insects (Birdlife Australia, 2014).	Highly Unlikely – not suitable habitat and the site is too disturbed
Haliaeetus leucogaster	White-bellied Sea-eagle		Marine	The White-bellied Sea-Eagle is found in coastal habitats with large areas of open water, especially those close to the sea-shore. This species feeds opportunistically on a variety of fish, birds, reptiles, mammals and crustaceans, and on carrion and offal.	Highly Unlikely – not suitable habitat
Himantopus himantopus	Black-winged Stilt		Marine	The Black-winged Stilt is found near coastal lagoons and shallow freshwater or brackish pools with extensive areas of mudflats, salt meadows, saltpans, coastal marshes and swamps (Birdlife International, 2014a).	Highly Unlikely – not suitable habitat
Merops ornatus	Rainbow Bee-eater		Marine	Populations of the Rainbow Bee-eater that breed in northern Australia are considered to be resident, and in many northern localities the Rainbow Bee-eater is present throughout the year. The Rainbow Bee-eater nests in a burrow dug in the ground. It is found across the better-watered parts of WA including islands preferring lightly wooded, sandy country near water.	Possible intermittent visitor to the site but unlikely to rely on the site for survival

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Recurvirostra novaehollandiae	Red-necked Avocet		Marine/ Migratory	The Red-necked Avocet occurs in wetland areas including bogs, marshes, swamps and permanent saline, brackish or alkaline lakes generally preferring saline habitats (BirdsSA, 2025).	Highly Unlikely – not suitable habitat
Glossurocolletes bilobatus	A Short-tongued Bee (southwest)	Priority 2		The *Glossurocolletes bilobatus* bee species is known to utilise the yellow flowering pea, *Gompholobium aristatum* (Phoenix, 2010).	Highly Unlikely – no host plants occur on the site
Acanthophis antarcticus	Southern Death Adder	Priority 3		Southern Death Adders inhabit a range of habitats, including rainforest, scrubland, semi arid zones and rocky outcrops. Typically during the day they remain mostly buried beneath sand, soil or debris, with just the tail and top of the head exposed. They do not actively hunt their prey but are cryptic snakes which sit motionlessly, sometimes for months on end, constantly watching for any animal which unwittingly comes within striking distance (Pilbara Pythons, 2014).	Highly Unlikely – not suitable habitat and the site is too disturbed
Ctenotus ora	Coastal Plains Skink	Priority 3		The Coastal Plains Skink has been identified on coastal plains in dune habitats (AROD, 2012).	Possible – may occur in sandier areas of the site
Euoplos inornatus	Inornate Trapdoor Spider (northern Jarrah Forest)	Priority 3		The Inornate Trapdoor Spider is recorded from clay creek banks (ALA, 2019).	Highly Unlikely – not suitable habitat
Geotria australis	Pouched Lamprey	Priority 3		The Pouched Lamprey is spawned in freshwater systems and then migrate to sea before returning to freshwater to spawn and die (OzFishNet, 2014).	No – no suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Idiosoma sigillatum	Swan Coastal Plain shield-backed trapdoor spider	Priority 3		The Swan Coastal Plain Shield-backed Trapdoor Spider arranges fallen twigs from the sheoak tree around the rim of its burrow entrance, enabling it to feel the vibrations of unsuspecting prey that wander by (Curtin, 2018).	Highly Unlikely – not suitable habitat
Lerista lineata	Perth Slider, Lined Skink	Priority 3		The Lined Skink is a burrowing species that occurs in pale sandy soils with coastal heath and shrubland areas in isolated populations in the south-west and mid-west coast of Western Australia. It feeds on termites and other small insects (AROD, 2014).	Unlikely – the site is too disturbed
Botaurus dubius	Australian Little Bittern	Priority 4		The Australian Little Bittern is mainly found in freshwater wetlands, where they inhabit dense emergent vegetation of reeds and sedges, and inundated shrub thickets. They are also occasionally found in brackish and saline wetlands such as mangrove swamps, Juncus-dominated salt marsh and the wooded margins of coastal lagoons (Naturewatch NZ, 2014).	Highly Unlikely – not suitable habitat and the site is too disturbed
Ctenotus delli	Dell's Ctenotus, Darling Range Heath Ctenotus	Priority 4		Dell's Ctenotus is found in the north Darling Range of south-western WA in dry sclerophyll forests on stony hills and ranges (Cogger, 2014).	Highly Unlikely – not suitable habitat
Elanus scriptus	Letter-winged Kite	Priority 4		The Letter-winged Kite is found in open or sparsely wooded country (Johnstone and Storr, 1998).	Highly Unlikely – not suitable habitat and the site is too disturbed
Falsistrellus mackenziei	Western False Pipistrelle	Priority 4		The Western False Pipistrelle occurs in high rainfall Jarrah, Karri and Tuart forests and coastal woodlands. They roost in hollows of trees, branches and stumps, and are insectivorous, feeding at night between the canopy and understorey of tall forest trees (Environment Australia, 1999).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Hydromys chrysogaster	Water-rat, Rakali	Priority 4		The Water Rat generally prefers wetland habitats characterised by dense, low-lying vegetation (0–30 cm from ground), low-density canopy cover and shallow, narrow water bodies (Speldewinde *et al*., 2013).	Possible – habitat may occur on the site
Isoodon fusciventer	Southern Brown Bandicoot, Quenda	Priority 4		Southern Brown Bandicoots are small grey marsupials that prefer dense scrub (up to one metre high). Their diet includes invertebrates (including earthworms, adult beetles and their larvae), underground fungi, subterranean plant material, and very occasionally, small vertebrates (DEC, 2012).	Unlikely – not suitable habitat and the site is too disturbed
Notamacropus irma	Western Brush Wallaby	Priority 4		The Western Brush Wallaby is a medium sized marsupial and its optimum habitat is open forest or woodland, particularly favouring open, seasonally wet flats with low grasses and open scrubby thickets (DEC, 2012).	Highly Unlikely –the site is too disturbed
Oxyura australis	Blue-billed Duck	Priority 4		The Blue-billed Duck is found on terrestrial wetlands in temperate regions, that are freshwater to saline, and may be natural or artificial. It nests in rushes, sedges, Lignum Muehlenbeckia cunninghamii and paperbark Melaleuca (Birdlife International, 2015). The species is almost completely aquatic, and is seldom seen on land. Non-breeding flocks, often with several hundred individuals, congregate on large, deep open freshwater dams and lakes in autumn. The daylight hours are spent alone in small concealed bays within vegetation or communally in large exposed rafts far from the shore (Birds in Backyards, 2015).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Synemon gratiosa	Graceful Sun-moth	Priority 4		The Graceful Sun-moth is a diurnal moth with dull coloured brown to black forewings and brightly coloured orange hind wings. The larvae burrow into the rhizomes of Lomandra maritima and Lomandra hermaphrodita exclusively and therefore require the presence of one or both of these species to be present in an area (Bishop et al., 2011).	No - no host plant species occur on the site
Charadrius cucullatus (Listed under the EPBC Act as *Thinornis rubricollis*)	Hooded Plover	Priority 4	Marine	The Hooded Plover primarily inhabits sandy, ocean beaches, with the highest densities on beaches with large amounts of beach-washed seaweed that are backed by extensive open dunes. In Western Australia the species also inhabits inland and coastal salt lakes (Birdlife International, 2014b).	Highly Unlikely – not suitable habitat

* Sourced from the SPRAT Database (DoEE, 2018) unless otherwise indicated

In summary, there was habitat on for the following species:

- Baudin's Black Cockatoo (*Zanda baudinii*), Endangered;
- Carnaby's Black Cockatoo (*Zanda latirostris*), Endangered;
- Forest Red-tailed Black-Cockatoo (*Calyptorhynchus banksii naso*), Vulnerable;
- Coastal Plains Skink (*Ctenotus ora*), Priority 3; and
- Rakal or Water Rati (*Hydromys chrysogaster*), Priority 4

The Rainbow Bee-eater (*Merops ornatus*), listed as Marine, may also be an intermittent visitor to the site but is unlikely to rely on the vegetation for survival.

3.6.4 Impact on Conservation Significant Species

The site has very limited habitat for Baudin's Black Cockatoo, Carnaby's Black Cockatoo and Forest Red-tailed Black-Cockatoo. There is 0.6ha of foraging habitat and limited roosting or potential breeding habitat on the site.

The Referral guideline for 3 WA threatened black cockatoo species indicate that the clearing of 1ha of foraging habitat or one potential breeding habitat tree is to be cleared then the clearing may have a significant impact. If there is to be a significant impact, then referral is required. To determine if there is a significant impact the Department of Climate Change, Energy, the Environment and Water (DCCEEW) require proponents to utilise the *Significant Impact Guidelines 1.1 - Matters of National Environmental Significance* (Significant Impact Guidelines) to undertake a self-assessment of the impact.

The criteria for a significant impact on Critically Endangered and Endangered species are if there is a real chance or possibility that it will:

- Lead to a long-term decrease in the size of a population
- Reduce the area of occupancy of the species
- Fragment an existing population into two or more populations
- Adversely affect habitat critical to the survival of a species
- Disrupt the breeding cycle of a population
- Modify, destroy, remove, isolate or decrease the availability or quality of habitat to the extent that the species is likely to decline
- Result in invasive species that are harmful to a critically endangered or endangered species becoming established in the endangered or critically endangered species' habitat
- Introduce disease that may cause the species to decline, or
- Interfere with the recovery of the species.

The criteria for Vulnerable species are slightly different and are if there is a real chance or possibility that it will:

- Lead to a long-term decrease in the size of an important population of a species
- Reduce the area of occupancy of an important population
- Fragment an existing important population into two or more populations
- Adversely affect habitat critical to the survival of a species
- Disrupt the breeding cycle of an important population

- Modify, destroy, remove or isolate or decrease the availability or quality of habitat to the extent that the species is likely to decline
- Result in invasive species that are harmful to a vulnerable species becoming established in the vulnerable species' habitat
- Introduce disease that may cause the species to decline, or
- Interfere substantially with the recovery of the species.

Avoidance and mitigation measures decrease the impact on these species.

Due to the very small area of foraging habitat available to support breeding and low number of potential breeding trees on the site if the entire site was to be cleared it is likely that the self-assessment would conclude that a referral under the EPBC Act is not likely to be required.

The Marine species Rainbow Bee-eater may also be an intermittent visitor to the site but is unlikely to rely on the site for survival and would not be impacted by development.

3.6.5 Pest Fauna

There are several pest species that are likely to be present on the site outlined in Table 8.

Table 8: Pest Species Likely to Occur on the Site

Taxa	Family	Species Name	Common Name
Mammalia	Canidae	Vulpes vulpes	Red fox
	Felidae	Felis catus	Feral cat
	Leporidae	Oryctolagus cuniculus	European Rabbit
	Muridae	Mus musculus	House Mouse
		Rattus rattus	Black Rat

3.6.6 Biodiversity Value

The EPA's (2002) *Terrestrial Biological Surveys as an Element of Biodiversity Protection Position Statement No. 3* indicated an ecological assessment of a site must consider its biodiversity value at the genetic, species and ecosystem levels; and its ecological functional value at the ecosystem level. The vegetation on the site is fragmented with little to no ecological linkage and is disturbed, with the likely presence of feral species such as foxes, cats and rabbits which would have highly modified the fauna assemblage from pre-European settlement.

3.7 Hydrology

3.7.1 Groundwater

The hydrogeology of the area is mapped as fractured rock which comprises a large variety of metamorphic and igneous rocks ranging from the sedimentary rocks to granite-greenstone terrain. At this stage no major aquifers are defined in the fractured rocks (DoW, 2009).

A 12 month groundwater monitoring program was completed for the site as part of the District Water Management Strategy investigations (ENV, 2009). Based on the 12 months monitoring of bores MW4, MW5, MW6 and DoW Bore 4849 to the east of site the average annual maximum groundwater level (AAMGL) was calculated across the site as shown in Table 9.

Table 9: Maximum Groundwater Levels at Site Bores and DoW Bore 4849 (ENV, 2009)

Bore	Maximum Recorded Groundwater Level (mAHD)	Depth to maximum Recorded Groundwater Level (m)	AAMGL (mAHD)	Depth to AAMGL (m)
MW1				
MW2				
MW3				
MW4	21.173	0.695	21.016	0.852
DoW 4849	14.937	-	14.720	-

Groundwater flow is in a northerly direction towards Adelaide Street.

Groundwater quality sampling was undertaken for bores MW1 to 4 and DoW 4849 on the site and analysed for physical parameters in the field by ENV staff (Table 2) and analysed by a NATA approved laboratory for nutrients. In summary:

- Groundwater within the site is generally fresh;
- Groundwater is slightly acidic with typical pH values less than 6.25;
- Total Nitrogen (TN) exceeds the ANZECC (2000) guideline of 1.2 mg/L and the Swan Canning Cleanup Program Long Term Target of 1 mg/L ranging from 1.5 mg/L to 3.2 mg/L; and
- Total Phosphorus (TP) is above and below the ANZECC (2000) guideline of 0.065 mg/L and the Swan Canning Cleanup Program Long Term Target of 0.1 mg/L ranging from 0.05 mg/L to 2.75 mg/L (ENV, 2009; Hyd2o, 2012).

The site is not within a Public Drinking Water Source Area (PDWSA) (DWER, 2026).

3.7.2 Surface Water

The site is generally flat to gently sloping. The majority of surface water flows locally towards the creekline that runs through the centre of the site and the lower lying areas on Lot 200. Water flow in the creekline is in a north-westerly direction and feeds into the Perth Airport Northern Drain Catchment. The surface water from the southern corner of the site flows locally towards a lower lying area to the south-west off-site as diffuse overland flow. The surface water flow from the site drains away from Munday Swamp, located to the south-west, and therefore does not impact on the water levels within the swamp

ENV (2009) undertook surface water monitoring through the central drain bi-monthly for a period of 12 months from July 2008 to May 2009. The maximum recorded level was 21.385m AHD.

3.8 Wetlands

The site contains eight wetlands (two Resource Enhancement and six Multiple Use) and is adjacent to one wetland as shown in the *Geomorphic Wetlands of the Swan Coastal Plain* Database (Figure 5) (Landgate, 2024b). There is also a creekline through the central part of the site that ultimately flows into Helena River that is also part of the two Resource Enhancement wetlands and one of the Multiple

Use wetlands. The wetlands are described in Table 10 and definitions of the management categories are in Table 11.

Table 10: Wetlands Located on the Site

Wetland Classification	Wetland Type	UFI Number	Location
Resource Enhancement	Sumpland	16226	Western part of the creekline drainage line.
Resource Enhancement	Sumpland	15940	Eastern part of the creekline drainage line.
Multiple Use	Sumpland	16225	To the north of the western REW
Multiple Use	Sumpland	15898	Traverses the centre of the northern part site from east to west along the creekline.
Multiple Use	Dampland	15267	South of the creekline.
Multiple Use	Sumpland	15777	Northern part of Lot 200
Multiple Use	Dampland	15779	Central part of Lot 200
Multiple Use	Sumpland	15780	The southern part of Lot 200.

Table 11: Management Categories and Objective for Wetlands

Management Category	General Description	Management Objectives	EPA Management Objectives (EPA, 2008)
Conservation Category Wetland (CCW)	Wetlands which support high levels of attributes and functions.	To preserve wetland attributes and functions through reservation in national parks, crown reserves, state owned land and protection under environmental protection policies.	Highest priority wetlands. Objective is to preserve and protect the existing conservation values of the wetlands through various mechanisms including: • reservation in national parks, • crown reserves and State-owned land, • protection under Environmental Protection Policies, and • wetland covenanting by landowners. No development or clearing is considered appropriate. These are the most valuable wetlands and any activity that may lead to further loss or degradation is inappropriate.

Management Category	General Description	Management Objectives	EPA Management Objectives (EPA, 2008)
Resource Enhancement Wetland (REW)	Wetlands which may have been partially modified but still support substantial ecological attributes and functions.	Priority wetlands. Ultimate objective is for management, restoration and protection towards improving their conservation value. These wetlands have the potential to be restored to conservation category. This can be achieved by restoring wetland structure, function and biodiversity. Protection is recommended through a number of mechanisms.	Priority wetlands. Ultimate objective is to manage, restore and protect towards improving their conservation value. These wetlands have the potential to be restored to Conservation category. This can be achieved by restoring wetland function, structure and biodiversity. Protection is recommended through a number of mechanisms.
Multiple Use Wetland (MUW)	Wetlands with few attributes which still provide important wetland functions	Use development and management should be considered in the context of water (catchment/strategic drainage planning), town (land use) and environmental planning through landcare.	Use, development and management should be considered in the context of ecologically sustainable development and best management practice catchment planning through landcare.

Source: Wetlands of the Swan Coastal Plan Volume 2b (Hill *et al*., 1996) unless otherwise referenced

The two Resource Enhancement wetlands currently mapped on the site were previously identified as a single wetland, Resource Enhancement Wetland (UFI 15898). This earlier mapping extended from the western to the eastern boundary of the site and included the central creekline as well as the wetland areas at either end.

A wetland assessment undertaken by PGV Environmental in 2014 found that the central portion of the previously mapped wetland, associated with the creekline, had significantly reduced ecological values and attributes due to altered geomorphology, historical land use, and the dominance of introduced flora species. Vegetation within this central area was assessed as being in Completely Degraded condition, with no native flora species present and a high abundance of weed species.

The eastern and western sections of the former Resource Enhancement Wetland (UFI 15898) supported vegetation in slightly better condition, with some native species present. However, the understorey in both areas was also assessed as Completely Degraded, with no native vegetation recorded apart from a single sedge species, and a high abundance of weeds. Notably, the Declared Weed *Zantedeschia aethiopica* (Arum Lily) was widespread, and Brazilian Pepper (*Schinus terebinthifolia*) was abundant within the eastern vegetated section.

DBCA reviewed the findings of the assessment and subsequently updated the wetland mapping. This resulted in the delineation of two smaller Resource Enhancement Sumplands—UFI 16226 and UFI 15940—as shown in the current mapping (Figure 5).

Under the *A Methodology for the Evaluation of Wetlands on the Swan Coastal Plain, Western Australia* (Department of Biodiversity, Conservation and Attractions, 2017), the wetlands are unlikely to be reclassified either upward to Conservation or downward to Multiple Use for the following reasons.

For the wetlands to be ungraded to Conservation Category the methodology requires a high degree of naturalness, ecological integrity, and minimal disturbance. In this case:

- Vegetation condition has been impacted by weed invasion.
- The western vegetated portion, while retaining mature *Eucalyptus rudis* and *Melaleuca rhaphiophylla*, shows clear disturbance.
- The eastern vegetated portion supports a dense canopy of *Melaleuca rhaphiophylla* over *Astartea fascicularis* and *Lepidosperma longitudinale*, but overall condition was assessed as Good at best.
- There has been modification to hydrology through excavation works and alteration of the creekline connecting the two wetlands.
- The degree of naturalness, as defined in the methodology, is considered Low.

Given these factors, the wetlands do not meet the higher ecological integrity thresholds typically required for Conservation status.

Conversely, a downgrade to Multiple Use is also unlikely as:

- Wetlands within the Mungala suite and the Southern River complex have been significantly impacted and reduced due to historic and ongoing land use pressures.
- As a result, the subject wetlands score highly for representativeness of geomorphology and vegetation complexes within the regional context.
- The vegetation, while impacted does retain a natural overstorey and therefore has Moderate values as defined under the methodology (DBCA, 2017).
- The wetlands provide habitat supporting fauna during vulnerable life stages (e.g., turtle nesting, tadpole development), indicating functional ecological value.

Given these factors, the wetlands meet higher ecological integrity thresholds than those required for Multiple Use status.

Based on the criteria set out by the 2017 DBCA methodology, the wetlands are appropriately classified as Resource Enhancement Wetlands. Their ecological values, while modified, remain significant within the broader landscape context. It is therefore unlikely that a reassessment under current site conditions would support a change in classification.

The two resource Enhancement wetlands are proposed to be retained with a buffer. Proposed buffer widths are examined and assessed in Section 3.9.

The part of the Creekline that is now mapped as UFI 15898 is categorised as Multiple Use. The functions of this wetland are best described in the context of a watercourse. The management of a watercourse is centred around ensuring water quality and quantity are managed as well as determining an appropriate foreshore. The determination of the foreshore is outlined in Section 3.10.

3.9 Wetland Buffers

3.9.1 Buffer Definitions

3.9.1.1 Separation Distance

EPA Guidance Statement 33 (EPA, 2008) states that wetlands that are to be protected require a minimum 50m buffer distance. This advice applies to Conservation Category wetlands as well as Resource Enhancement wetlands if they are to be retained in a development. There is no scientific rationale to justify why 50m is the minimum setback distance.

The Guidance Statement also says that an alternative to applying the minimum 50m setback is to undertake a site-specific buffer assessment. In determining a setback using site-specific studies the overall setback should be determined by:

- The wetland's values;
- The activities, land uses or development near the wetland, existing and proposed; and
- The threats posed by the adjacent activities, land uses or development.

The WAPC (2005) developed guidelines state that site-specific buffer requirements may be determined and notes that buffering may involve a combination of a setback distance and a physical barrier.

3.9.1.2 Wetland Function Area

The Wetland Function Area is defined in the *Guideline for Development of Wetland Buffer Requirements* (WAPC, 2005) as "*the spatial boundary of the wetland. It normally would include the wetland itself and the wetland vegetation*".

The wetland function area is defined by the wetland values (obligate wetland vegetation, surface saturation or inundation and/or hydric soils). The wetland function area for both wetlands has been delineated in wetland assessments (PGV Environmental, 2012) and is the area as mapped in the Geomorphic Wetlands of the Swan Coastal Plain Dataset (Figure 5).

3.9.1.3 Role of the Buffer

Wetland buffers are defined as the transition zone between the wetland and the surrounding land use. Buffers are measured from the wetland boundary as mapped in the Geomorphic dataset, confirmed by DBCA.

The role of the wetland buffer is to maintain the ecological processes, values and functions of the wetland and to protect the wetland from potential adverse impacts (EPA, 2008).

Fringing vegetation in buffers may fulfil the following habitat functions:

- Breeding and roosting habitat for birds inhabiting the wetland;
- Dryland habitat during inundation periods for terrestrial species; and
- Cover, feeding and breeding habitat for native fauna.

Because of the completely cleared nature of the buffer, and the existence of fill material the buffer does not currently fulfill any of these functions.

3.9.2 Potential Threats to the Wetland

3.9.2.1 Impact of Clearing on Groundwater Levels

Clearing for development typically gives rise to an increase in groundwater recharge and a decrease in evapotranspiration, leading to a rise in groundwater levels. The magnitude of this rise depends on local factors including the area and type of vegetation cleared. In new residential areas the rise is normally temporary, as progressive establishment of domestic and municipal bores increases groundwater abstraction.

The groundwater catchment for the wetlands has been cleared for many decades, and any groundwater rise attributable to that clearing is likely to have already occurred.

3.9.2.2 Direct Impacts on Vegetation

Potential direct impacts on the REW vegetation include people walking through the wetland vegetation from the Light Industrial development. This is considered highly unlikely as the Paperbark and Bulrush vegetation in the eastern wetland (UFI 15940) wetland is very thick, likely to contain Tiger Snakes as a deterrent to access, and people would need to cross the drain which is inundated for many months of the year. The western wetland (UFI 16226) has a more cleared understorey and therefore could have a higher level of access.

Wetland vegetation in both wetlands can also be inadvertently impacted during construction works resulting in damage to the existing vegetation.

3.9.2.3 Hydrology

Drainage of stormwater can pose a hazard to wetland values by changing the hydrological regime of a wetland, impacting on vegetation and wetland function.

Light Industrial development has the potential to add nutrients and contaminants to surface water in the wetland and groundwater due to activities on the Light Industrial sites and off roads.

3.9.2.4 Weeds

The REWs and associated buffers are currently infested with a number of invasive weeds. Weeds can be spread by wind, animals, humans (on footwear etc.), vehicles and by vegetative growth. Light industrial development is highly unlikely to increase the potential for weeds to spread further in the REW.

3.9.2.5 Fire

Fire can increase with additional human access, however the part of the wetland is already in an exposed site and fire does not appear to have been an issue previously. It is unlikely that the proposed development would increase the fire risk to the wetland vegetation.

3.9.2.6 Rubbish

Edge effects from Light Industrial development on adjacent bushland may include litter (windblown, casual littering and illegal dumping) impacting on wetland vegetation. With the installation of appropriate fencing and the implementation of waste management plans rubbish impacts can be mitigated.

3.9.2.7 Feral Animals

The wetland vegetation is highly likely to already be home to rabbits, mice, rats, feral cats and foxes.

Light Industrial development is unlikely to increase the number of mice, rats, cats and foxes as formal fencing will be provided to the development and each development will have controlled waste management in place.

3.9.2.8 Domestic Pets

Domestic pets are not likely to increase as a result of the light industrial development and therefore will not likely pose an increase threat to the wetland's fauna.

3.9.2.9 Edge Effects

Edge effects on wetlands and other bushland areas in the Perth region have traditionally been managed primarily by separation through the provision of buffers. However, protection against many edge effects can also be provided by other means such as hard edges such as roads, barriers (fences, swales etc.) and surveillance. The most effective protection from edge effects is considered to be a combination of separation and barrier.

3.9.3 Mitigation of Threats to Wetlands

Given that both Resource Enhancement Wetlands have the same threatening processes, similar environmental values, similar Completely Degraded buffers and are linked by the creekline it is considered to be appropriate to apply the same mitigation measures to protect the wetland values to each wetland.

3.9.3.1 Direct Impacts on Vegetation

To prevent people walking through the wetland, a fence should be installed between the development and the wetland buffer.

During construction and removal of fill from the wetland buffer all plans should show the extent of the wetland vegetation as being retained and not to be cleared. The wetland vegetation should be fenced temporarily during construction works to avoid inadvertent damage to the vegetation. Appropriate inductions and plans will ensure that the threat of inadvertent damage to the existing wetland vegetation will be mitigated.

The implementation of a reduced buffer does not increase the impacts of these threats to the wetlands and therefore a 15m buffer is considered appropriate to protect the existing wetland vegetation from direct impacts.

3.9.3.2 Hydrology

The hydrology of the wetland will be maintained using the drainage design system contained in the Local Water Management Strategy. The design will require stormwater is managed to maintain groundwater quality and quantity as well as managing overland flows to ensure that pollutants, both chemical and gross pollutants, are trapped and appropriately managed within the development area.

Drainage design for the development will be undertaken in in accordance with *Better Urban Water Management* (WAPC, 2008). Industrial lots are to use biogardens or similar vegetated treatment systems (according to the City) for their stormwater runoff. The industrial roads will also utilise bioretention gardens and be required to incorporate best practice strategies within their lot boundary

to treat stormwater including sediment forebays, oil separators, Gross Pollutant Traps and separated washdown facilities.

Runoff from storms up to 1% Annual Exceedance Probability Event (100 year) attenuated back to allowable discharge rates specified by Perth Airport based on downstream system capacity (Oversby Consulting, 2026).

All drainage from the development will be managed under the Stormwater Management Plan (Oversby Consulting, 2026) with appropriate controls to manage stormwater and ensure there is no adverse impact on the surface water and groundwater quality.

The stormwater controls will be in accordance with:

- Perth Airport systems requirements;
- City of Kalamunda *Stormwater Design Guidelines* (2022);
- *Better Urban Water Management* (WAPC, 2008); and
- Principles of Water Sensitive Urban Design (DWER, 2011) (Oversby Consulting, 2026).

Groundwater will be managed to similar levels, so that there is a similar groundwater level within the wetlands, as well as existing inverts of control structures within the wetlands remaining essentially the same, effectively controlling groundwater levels through the wetland and waterway system.

The stormwater controls can be adequately managed within a 15m buffer with stormwater controls outside of the buffer.

3.9.3.3 Weeds

The proposed separation of the wetlands to the development using a hard barrier such as a road or limestone firebreak and 15m of native planting in the buffer will remove the threat of future weed vectors entering the REWs from the current site conditions.

3.9.3.4 Fire

The proposed treatment of the wetland buffer with native sedges will be undertaken in accordance with the Bushfire Management Plan to ensure that risks to wetland vegetation are appropriately mitigated. In addition, the use of planting in conjunction with the installation of a road or fire track along the perimeter of the wetland will provide supplementary fire control infrastructure. No additional buffers are required for the management of fire risks to the wetlands.

3.9.3.5 Rubbish

As part of Development Applications (DA) it is expected that a waste management plan will be required to ensure rubbish from the development is secured and fencing prevents any windblown rubbish from being blown into the wetland areas. The proposed wetland buffer and fence provide more protection from windblown rubbish than is the current situation.

Waste management measures and the fence will provide adequate protection to the wetland with no additional buffer required to mitigate the risk of impacts to the wetland function area from rubbish.

3.9.3.6 Feral Animals

The setback distance would not have any impact on cats, foxes or rabbits impacting on the wetland as these animals can roam over large distances. Appropriate waste disposal will need to be part of the

design of the Light Industrial development to ensure there is not a proliferation of rats and mice. This can be managed by the use of self-closing bins and ensuring that any food waste is managed appropriately. The proposed buffers to the wetland do not require additional distance to mitigate potential impacts from feral animals.

3.9.3.7 Edge Effects

Currently the wetland is not protected by any buffer and is impacted by a number of invasive weeds. The proposed Light Industrial development will include a buffer of 15m of planted vegetation, appropriate fencing to prevent access and a hard edge to reduce weed vectors. The Light Industrial development will also provide a higher level of public surveillance, which will minimise the opportunities for illegal dumping, vehicular access and arson.

It is expected that a 15m buffer and these additional protections to the wetland will effectively protect the wetland from edge effects.

3.9.4 Proposed Wetland Buffer

DBCA typically recommends a default 50 m buffer to wetlands in the absence of site-specific studies. However, where site conditions have been appropriately assessed, buffer requirements may be determined based on environmental values, and buffering may comprise a combination of setback distance and physical barriers.

Analysis of both of the Resource Enhancement wetlands' environmental values and the integrity of the wetlands' core, despite limited existing buffering in the surrounding landscape, indicates that a reduced buffer of 15 m would provide adequate protection of wetland values (Figure 6). The reduced wetland buffer will result in the following outcomes:

- Reinstatement of natural soils by the removal of fill in the wetland buffers;
- Protection from pollutants to the wetland by retaining the 15mm rainfall event in biogardens and sediment forebays, oil separators, Gross Pollutant Traps and separated washdown facilities;
- Provision of controlled surface water flows to the wetland to maintain the hydrological regime;
- Reinstatement of native vegetation within the wetland buffer, improving the condition of the wetland;
- Improved fauna habitat values providing a sedgeland for birds, reptiles and amphibians;
- Management of deleterious impacts such as uncontrolled access, rubbish and feral animals; and
- Reduced weed vectors to the wetland.

The proposed main road through the centre of the Structure Plan Area (Appendix 1) incurs slightly into the 15m buffer in Wetland UFI 16226. The road has been aligned to be consistent with an existing driveway and crossover of the creekline and therefore minimises further disturbance to the waterway. The small decrease in buffer is unlikely to impact on the outcomes for the wetland.

3.10 Creekline Foreshore Assessment

3.10.1 Methodology

The section of the creekline located within Multiple Use Wetland UFI 15898 (Figure 5) exhibits functionality that is more accurately characterised as a watercourse. To determine appropriate setbacks that maintain the values of the watercourse and enhance its environmental attributes, a foreshore assessment was undertaken for this feature within the Structure Plan area.

The foreshore assessment includes database searches to obtain information about the creekline. The following were investigated:

- Review of flora and vegetation studies previously undertaken;
- Site specific field assessment of the creekline and foreshore;
- Historical aerial photographs were examined for evidence of any modifications to the banks or floodway for the creekline (Landgate, 2025a);
- Cultural heritage values from the Department of Planning Lands and Heritage (DPLH) Aboriginal Cultural Heritage Inquiry System specific to the creehline (DPLH, 2025);
- Soil mapping by the Department of Primary Industries and Resource Development (DPIRD) NRMInfo (DPIRD, 2025); and
- Groundwater attributes as undertaken for the LWMR (Oversby Consulting, 2024).

The field assessment was undertaken by PGV Environmental on 7 July 2025. The site survey included a thorough examination of the site.

3.10.2 Historic Creekline Condition

The Creekline on the site originates from drainage on the eastern boundary and flows from east to west at 22mAHD, flowing to the west to an elevation of 20mAHD (Figure 2). The Creekline has been highly modified for more than 60 years. In the aerial photograph from 1965 most of the creekline has been cleared (Plate 5).

A review of historical photography and anthropogenic remains on the site show the wetland areas have been highly disturbed. The flatter wetland areas have been used for grazing. The drainage line of the mapped wetland has been modified extensively.

The earliest aerial photography available is from 1953 (Landgate, 2014a) and shows the wetland has been partially cleared at this early date (Plate 6).

Plate 6: Aerial Photograph of Creekline from 1953 (Landgate, 2025a)

In aerial photography from 1985 the creekline appears to be modified further with the drainage line being deepened through excavation (Plate 7).

Plate 7: Aerial Photograph of Creekline from 1985 (Landgate, 2025a)

The drainage line has been significantly modified by excavation and fill has been added to the site over areas of the wetland (Plate 8). There are areas of fill along the creekline (Plate 9).

Plate 8: Excavated Area

Plate 9: Anthropogenic Fill

The incorporation of fill over much of the wetland area has altered the topography and drainage over the mapped wetland area.

3.10.3 Vegetation

The vegetation in the creekline is in mostly Degraded to Completely Degraded condition with a small area at the eastern end rated as Degraded to Good and the fringing areas are generally Completely Degraded and Degraded (Figure 4).

3.10.4 Watercourse Hierarchy

The creekline flows westward to the boundary of the Structure Plan area and water is then piped underground. The creekline is rated as a first order tributary as there are no other smaller tributaries flowing into the creekline downstream from the site (DPE, 2022).

3.10.5 Cross Sections

The bed and banks of the creekline have been highly modified and as such the grade of the banks, distance between the top of banks and width of the creekline is variable. The cross sections of the creekline are described in Table 12. The locations are shown on Plate 10.

Plate 10: Locations for Foreshore Assessment

Table 12: Creekline and Foreshore Assessment

Location	Bed	Banks	Landform Condition	Vegetation	Photographs
1	Shallow bed approximately 5-10m wide	Banks are modified due to excavation	Sandy soil and impacted by grazing. No slumping evident	MrAf - *Melaleuca rhaphiophylla/Astartea fascicularis* Thicket to Low Woodland. Area of foreshore cleared with some native sedges	

Location	Bed	Banks	Landform Condition	Vegetation	Photographs
2	Narrow bed approximately 5m wide	Banks narrowly incised due to excavation	Banks impacted by grazing but no obvious slumping or erosion	Creekbed contains some *Melaleuca rhaphiophylla* with weeds and is Degraded. Foreshore cleared and Completely Degraded	
3	The channel in this area has a bed approximately 10m wide	This area is more shallowly incised.	Banks impacted by grazing but no obvious slumping or erosion	ErMr *Eucalyptus rudis* Woodland to Low Forest over *Melaleuca rhaphiophylla* Low Forest over Arum Lily and is Degraded. Foreshore cleared and Completely Degraded	

The creekline is highly modified by excavation, clearing and fill and shows the impact of grazing. The vegetation in the creekline is Degraded to Completely Degraded (Figure 4). The fringing vegetation is mostly Completely Degraded with areas of fill and very little vegetation.

The stability of the banks of the creekline is assessed as being Moderate:

> *Some localised erosion, slumping and sediment deposits; native vegetation cover on verges may be patchy and interspersed with patches of exposed soil* (WRC, 1999).

The rating is mainly due to the presence of fringing vegetation along most of the banks with only a few occurrences of erosion impacting on the vegetation. The vegetation in the creekline and foreshore is considered to be Poor, defined as:

> *Modified vegetation structure with native plants comprising only (2 points) 20 - 50% of the total species composition. Trees remain with only scattered shrubs and an understorey dominated by weeds; prevalent disturbance* (WRC, 1999).

3.10.6 Living Stream

The degraded condition of the existing creekline provides an opportunity to modify sections of the watercourse and realign flows into a proposed living stream. The design builds on the current hydrological function of the site, where both the wetland areas and the open drain convey flows, while also providing storage and water treatment.

The degraded open drain will be partially rerouted to improve the overall site layout and to facilitate the establishment of a more naturalised drainage corridor that supports both stormwater management and ecological enhancement. Earthworks associated with the proposed living stream will create a relatively weed-free channel that can be revegetated with appropriate riparian species, while maintaining hydraulic capacity.

3.10.7 Floodplain Mapping

Floodplain mapping undertaken for the LWMR shows the 10% AEP is 11m wide for the length of the creekline (Oversby Consulting, 2026). The 1% AEP is 13m wide, due to the flattening of the banks (Oversby Consulting, 2026) (Appendix 8).

3.10.8 Foreshore Setback

The creekline is considered to be a waterway, rather than a basin type of wetland and, as such, management of the waterway is administered by DWER rather than DBCA. Waterways do not have a minimum setback such as the 50m setback that exists with basin type wetlands. Waterways require a foreshore area between a proposed development and the waterway primarily to protect the creekline ecology but also to protect any fringing vegetation and habitat that is important to the waterway and to prevent flooding of adjoining areas. A foreshore area can also provide public recreational amenity and potentially have a stormwater drainage function. The foreshore to the creekline is largely devoid of any vegetation, planted or native past the immediate area to the creekline.

There are several guidance documents to assist with determining an appropriate setback as follows:

- *Planning and Management Foreshore condition assessment in urban and semi-rural areas of south-west Western Australia* (WRC, 1999);
- Operation Policy 4.3: *Identifying and establishing waterways foreshore areas* (DoW 2012);
- Guidance Note 6: *Identifying and establishing waterways foreshore areas* (DoW 2013); and
- Water Note 23: *Determining foreshore reserves* (WRC 2001).

First order streams are generally recommended to have a total width of 20m plus the channel. The channel width is approximately 1.4m at the base of the channel and then has a main with of 11m. This would result in a total foreshore width of 41m (Figure 6). This generic width can then be considered in the context of multiple factors such as the biophysical conditions of the streamline, and the nature of the management requirements.

The biophysical criteria used to determine an appropriate setback are assessed in Table 13 for consideration when identifying a foreshore area (WRC 2001).

Table 13: Biophysical Criteria and Assessment

Biophysical Factor	Assessment of Factor	Spatial Implications for Setback
Vegetation	The wetland vegetation is mainly along the creekline made up of planted and native species that is all Degraded to Completely Degraded. There is no native vegetation on the remainder of the site away from the creek.	All wetland vegetation to be retained. No dryland vegetation needs to be retained due to its absence on the site. Therefore, setback not determined by site vegetation characteristics.
Hydrology	The creekline is mainly a narrow, shallowly incised central creek and a flat, broad floodplain that is partially waterlogged and inundated in winter/spring.	The setback width to the waterway will not affect the hydrological function of the creekline and floodplain.
Topography	The land adjoining the creekline is flat to moderately sloping and impacts on the foreshore area.	The foreshore setback should maintain the current topography. It is recommended that a reserve containing the 1%AEP would be adequate.
Soil Type	The soils are Pinjarra, Ya2 Phase (213Pj_Ya2) is located on plain and swamp margins with deep, poorly drained, grey siliceous sand overlying clay.	No spatial implications
Erosion	The narrow, shallowly incised central creekline have potential for erosion to occur so all existing vegetation should be retained	No spatial implications
Function	Function is flood conveyance to the Perth Airport Northern Drain Catchment	Water conveyance function not impacted by foreshore setback width
Habitat	Habitat is highly impacted and the current foreshore does not provide significant habitat values	No fringing dryland vegetation present that needs to be retained in a foreshore reserve. Therefore setback width not impacted.

Biophysical Factor	Assessment of Factor	Spatial Implications for Setback
Land Use	The creekline and foreshore previously used for agriculture but this will be ceased when the surrounding land use is changed is not used and dryland area not used	The future function of the foreshore area will likely include some passive recreational value such as a pathway parallel with the creekline.

The primary factor in determining a suitable setback from the creekline/stream is the generally Completely Degraded condition of the foreshore and lack of native vegetation. Management of stormwater in accordance with *Better Urban Water Management* (WAPC, 2008) will maintain water quality by retaining and treating first flush events while ensuring that the hydrological regime and overland flows to replenish the creekline are maintained. There are no factors identified that would warrant increasing the proposed foreshore so the total stream and foreshore width of 41m is considered to be adequate to protect and enhance the creekline environmental values.

4 ENVIRONMENTAL ASSESSMENT

4.1 Proposed Development

The proposal is to develop the site for Light Industrial purposes. The site is likely to be largely cleared with the exception of the vegetation associated with the creekline. The creekline may be rehabilitated to improve the ecological linkage it provides. Additionally formalising stormwater controls to manage runoff into the creekline will occur with the implementation of the Local Water Management Strategy in accordance with Better Urban Water Management. Mature trees should be retained where possible.

4.2 Land Use

The site has historically been mostly cleared and is not listed as a Contaminated Site. The past and present land use on the site is not considered a constraint to development.

4.3 Geology and Soils

The Pinjarra Plain System soils are not a constraint for development. There are similar developments on these land units in the surrounding area.

The soils mapped on the site have a high risk of being susceptible to wind erosion and therefore dust controls will be required during construction. Wind erosion risk will be minimised once the site is fully developed as the ground disturbing activities have been completed.

There is an acid sulphate soil risk as mapped over the site. WAPC *Acid Sulphate Soils Planning Guidelines* (WAPC, 2009) indicate that "*acid sulphate soils are technically manageable in the majority of cases*" which would be applicable to the site. ASS Investigation and, if required, Management Plans should be prepared once the detailed design of soil disturbance on the site is finalised. This should be undertaken in accordance with the *Acid Sulphate Soils Guideline Series: Identification and Investigation of Acid Sulphate Soils and Acidic Landscapes* (DER, 2015a) and *Treatment and Management of Soils and Water in Acid Sulphate Soil Landscapes* (DER, 2015b).

The soils on the site do not provide an environmental impediment to the development of the site.

4.4 Hydrology

Groundwater will be managed to similar levels, so that there is a similar groundwater level within the wetlands, as well as existing inverts of control structures within the wetlands remaining essentially the same, effectively controlling groundwater levels through the wetland and waterway system.

Stormwater management will be required to be addressed in accordance with *Better Urban Water Management* (WAPC, 2008). An Urban Water Management Plan will be required at the subdivision stage. All lots will be required to use biogardens or similar vegetated treatment systems (according to the City) for their stormwater runoff as well as best practice strategies within their lot boundary to treat stormwater including sediment forebays, oil separators, Gross Pollutant Traps and separated washdown facilities.

Water management will be guided by the Local Water Management Report (Oversby Consulting, 2026). Management measures as per the LWMR are outlined below:

Water Conservation and Servicing

- *All lots are to be connected to a potable reticulated water main to provide security of supply.*
- *All residential lots are to be connect to mains sewerage.*
- *All residential lots are to utilise suitable on site effluent management.*
- *The Living Stream landscaping is to be primarily irrigated via stormwater and the shallow natural groundwater.*
- *The residential POS areas may receive irrigation*

Stormwater management

- *All new residential lots will detain and infiltrate the 5% AEP on site, as per the City of Kalamunda's guidelines.*
- *All new industrial lots will detain and infiltrate stormwater so that there 1% AEP runoff is in keeping with the requirements of the downstream Perth Airport drainage network.*
- *Bioretention systems and/or soakwells assist with treatment of stormwater with the new road networks.*
- *The Living Stream and retained Wetlands assist with treatment and detention of stormwater from the subject land and upstream catchments.*
- *The Southern POS basin will retain and infiltrate stormwater discharged into it.*
- *The lot detention, POS basins and Living Stream/ Wetland network detain all peak flows to at/below pre development rates as well as meeting the Perth Airport discharge rate.*

Flood management

- *All lot levels will be designed to maintain a minimum separation clearance of 300mm between the habitable floor levels and the 1% Annual Exceedance Probability (AEP) flood levels generated on site.*
- *All lot levels will be designed to maintain a minimum separation clearance of 500mm between the habitable floor levels and the 1% Annual Exceedance Probability (AEP) flood levels of the Living Stream and main POS detention basin.*
- *The Living Stream and wetland network allows for 1% AEP flood flows to traverse the subject land site as well as providing safe storage.*

Groundwater Management

- *Inflow to the groundwater is to be treated in bioretention gardens and Living Stream/wetland network.*
- *Where necessary the subject land is to be lifted using clean fill to maintain necessary separation to the groundwater.*
- *Subsoil systems are to be installed to control groundwater rise in areas with groundwater less than 1.5m from the surface.*
- *Mains sewerage will remove potential pollutants from the residential lots for treatment off site.*

- *Removal of stock and large gardens is likely to reduce nutrient loads to the groundwater.*

Ecosystem Protection and Enhancement

- *The stormwater system will assist with capturing sediments, large debris, nutrients and other pollutants from all stormwater runoff, protecting the subject land wetlands.*
- *New riparian ecosystems creation will be undertaken through converting the current degraded drainage line into a Living Stream.*
- *Bioretention systems will provide some limited habitat to fauna throughout the subject land.*
- *The wetlands are to be enhanced through weed control and revegetation as well as being protected in reserves with appropriate buffers* (Oversby Consulting, 2026).

The management of stormwater is not considered a constraint to development.

4.5 Flora and Vegetation

The flora and vegetation on the site has been significantly impacted by historical clearing. The proposed development would not result in conservation significant flora and vegetation being impacted. The vegetation on the site is mostly Degraded and therefore the proposed development will not impact on locally or regionally significant vegetation and there is no impact on any Threatened or Priority Ecological Community.

4.6 Fauna

The fauna habitat values have been impacted by the extensive historical clearing on the site and as such the proposed development would have very little impact on native fauna habitat. Impacts to Black Cockatoos are likely to not be significant however the retention of trees within the proposed development would mitigate some of the habitat loss.

A Fauna Management Plan should be prepared prior to clearing, including the trapping and relocation of both common and potential conservation significant species present on the site.

4.7 Heritage

There is an Aboriginal Cultural Heritage Site mapped on the site. Advice should be sought to determine obligations under the *Aboriginal Heritage Act 1972.* The sites are mapped over a large area and there are numerous developments, recent and ongoing in the area so the heritage site is not likely to be a constraint to development.

The identification of materials that may constitute an archaeological site, if identified during earthworks, would be required to comply with the *Aboriginal Heritage Act, 1972* regarding such sites.

4.8 Wetlands

4.8.1 Wetland Development/Retention

The management of wetlands within the Structure Plan area will be undertaken in accordance with the Local Water Management Report (LWMR), as outlined in Section 4.4. Several scenarios were explored during the Structure Plan design process.

A review was undertaken to determine whether the wetland values and attributes were commensurate with the existing mapping and classification on the site, or whether the wetlands were so degraded that they were no longer viable and could be included within the developable envelope.

Five of the Multiple Use Wetlands on the site were classified as being commensurate with Multiple Use values and were considered to have development capabilities. These wetlands are:

- Multiple Use Sumpland (UFI 16225);
- Multiple Use Dampland (UFI 15267);
- Multiple Use Sumpland (UFI 15777);
- Multiple Use Dampland (UFI 15779); and
- Multiple Use Sumpland (UFI 15780).

Multiple Use Sumpland (UFI 15898) is classified as Completely Degraded and was considered to be appropriately classified, except where the wetland forms part of the creekline that traverses the property and ultimately drains to the Helena River (ENV Australia, 2009). The creekline retains hydrological value and ecological function; however, this does not warrant an upgrade to the wetland management category.

The two Resource Enhancement wetlands have recently been assessed by the Department of Biodiversity, Conservation and Attractions (DBCA) and are considered to be accurately mapped and categorised. Accordingly, it is unlikely that the management category of these wetlands would be downgraded, and development within these wetlands is not considered appropriate.

As the classification of all wetlands on the site is considered accurate, it is not expected that any wetland management category would be upgraded in their current condition. The buffers and foreshore setbacks to the wetlands and creekline are classified as Completely Degraded and are characterised by anthropogenic fill, invasive weeds, and cleared paddock areas.

Management of the wetlands, creekline, buffers, and foreshore areas will include the removal of Declared Pests, management of invasive weeds, rehabilitation of disturbed areas, and improvements to water quality through the management of first-flush stormwater events. Over time, these measures may result in the wetland values becoming more commensurate with Conservation Category Wetlands.

The improvement in wetland values is considered to mitigate the impact of development within the Multiple Use wetlands elsewhere on the site. As the preservation and management of the wetlands provides mitigation for the onsite impacts it would not be considered an appropriate offset for projects undertaken in surrounding areas.

4.8.2 Wetland Buffers

The wetland buffers are Completely Degraded and have been significantly altered. Management of the threats to the wetland should be undertaken using a number of measures including:

- Management during civil works such as erosion control, soil stockpile management, protection of the creekline to prevent erosion, slumping and sedimentation;
- Access control using fencing and paths;
- Reinstation natural landform in areas that have fill.

- Management of the hydrology of the wetlands using the drainage design system contained in an approved Urban Water Management Plan including:
    - Hardstand runoff from the first 15mm of rainfall will be managed via biofiltration systems to provide water quality treatment of small events prior to off-site discharge.
    - Runoff from storms up to 1% Annual Exceedance Probability Event (100 year) will be detained within lots;
    - Maintenance of the predevelopment catchments and discharge locations to maintain the existing hydrological interface with the adjacent REW.
    - The stormwater controls should be in accordance with, but not limited to:
        - Perth Airport systems requirements;
        - City of Kalamunda *Stormwater Design Guidelines* (2022);
        - *Better Urban Water Management* (WAPC, 2008); and
        - Principles of Water Sensitive Urban Design (DWER, 2011).
- Weed control programs in the wetlands to management invasive weeds and Declared pests
- Provide adequate fire breaks to development; and
- Appropriate waste disposal/waste management plans as part of the design of the Light Industrial development to ensure there is not a proliferation of rats and mice, including self-closing bins and ensuring that any food waste is managed appropriately.

The proposed Structure Plan provides for 15m buffers surrounded by defined hard edges to protect the wetlands. There is a small area in which the buffer is proposed to be lightly reduced to utilise an existing road and crossover of the creekline for a main road through the Structure Plan area (Appendix 1).

The assessment demonstrates that the proposed removal of fill and revegetation within the proposed buffer as shown on Figure 6 will not only suitably protect the wetland's ecological functions but will also result in improved protection and enhanced ecological values. This outcome will be further supported by appropriate stormwater management measures designed to improve water quality, the installation of fencing to restrict access and function as a gross pollutant trap, and the provision of a defined hard edge to the wetland (such as a road or limestone fire track). Collectively, these measures provide an integrated approach to wetland protection.

Overall, the assessment concludes that the proposed 15 m buffer, together with the management measures incorporated into the Structure Plan, will suitably protect the wetland's ecological functions.

4.8.3 Wetland Treatment

In summary the wetlands as mapped on the site have the following recommendations as outlined in Table 14.

Table 14: Proposed Treatment of Wetlands in Structure Plan

Wetland Classification	Wetland Type	UFI Number	Location	Relevant Values	Retain (Yes/No)	Buffer/ Foreshore and Management Recommendation
Resource Enhancement	Sumpland	16226	Western side of the site.	Vegetation in Good condition and is also part of the creekline	Yes	15m buffer and then fencing and a hard edge to provide integrated management measures with weed management, rehabilitation and stormwater management
Resource Enhancement	Sumpland	15940	Eastern part of the creekline drainage line.	Vegetation in Good condition and is also part of the creekline	Yes	
Multiple Use	Sumpland	16225	To the north of the western REW	Vegetation is Completely Degraded	Yes – in buffer	Forms part of the 15m buffer to REW 16226
Multiple Use	Sumpland	15898	Traverses the centre of the northern part site from east to west along the creekline.	Vegetation is completely Degraded but is part of the creekline that ultimately flow to Helena River so needs to be managed to ensure there are no downstream impacts	Yes – in part along the creekline	To be treated as a watercourse with a 15m buffer to the 11m main channel for a total width of 41m that contains the 10% AEP with integrated management measures of fencing, a hard edge, rehabilitation and stormwater management consistent with the Resource Enhancement wetlands
Multiple Use	Dampland	15267	South of the creekline.	Cleared and filled in parts. Completely Degraded	No	NA
Multiple Use	Sumpland	15777	Northern part of Lot 200	Already cleared and filled	No	NA
Multiple Use	Dampland	15779	Central part of Lot 200	Already cleared and filled	No	NA
Multiple Use	Sumpland	15780	The southern part of Lot 200.	Already cleared and filled	No	NA

4.8.4 Living Stream

The creekline through the site has been degraded over many years, with sections of the channel highly modified and only limited riparian vegetation remaining. The proposed living stream has been designed to maintain hydraulic connectivity between the wetlands and ultimately convey flows to the Perth Airport Northern Drain catchment, while consolidating the existing drainage function and ensuring sufficient capacity to accommodate stormwater flows.

The design also incorporates measures to enhance both hydraulic performance and ecological value, including the establishment of riparian vegetation and the introduction of features such as minor meanders, rock boulders, pools and riffles.

4.8.5 Foreshore Reserve

The combined width of the channel of the living stream and proposed foreshore, totalling 41m of POS as shown on Figure 6, aligns with the proposed 15m wetland buffer widths, thereby providing continuity of environmental setbacks across the proposed development. The 41m corridor incorporates the 1% Annual Exceedance Probability (AEP) flood extent, together with an additional 9m on either side of the 1% AEP level.

The foreshore will be enhanced through native planting on the banks of the channel to improve bank stabilisation and provide additional protection to the waterway. Consistent with the wetland treatment, the creekline is expected to be fenced and bounded by a defined hard edge, such as a road or fire track. These measures will mitigate potential impacts associated with uncontrolled access, rubbish dumping, weed spread and edge effects.

In addition, the measures previously outlined and incorporated into the LWMR will ensure that both water quality and water quantity are appropriately managed, resulting in a positive downstream outcome.

5 SUMMARY AND CONCLUSIONS

5.1 Summary

The Environmental Assessment of the proposed Light Industrial Development of the Hatch Court Precinct has found the following:

- The historic and current land-uses on the site are not a constraint to develop the site in accordance with the Structure Plan;
- There are no Aboriginal Heritage sites or sites of other heritage values on the site;
- The soils mapped on the site are not a constraint to development. Soil types with a high to extreme wind erosion risk can be managed for dust control during construction through the preparation and implementation of a Dust Management Plan;
- Acid Sulphate Soil investigation and Management may be required;
- There are no Threatened or Priority flora species occurring on the site and therefore flora is not a constraint to development;
- The vegetation on the site is mostly Degraded and is not representative of a Threatened or Priority Ecological Community and the vegetation is not considered to be a constraint to the proposed development;
- The site contains some trees which provide foraging habitat and potential breeding habitat for Baudin's, Carnaby's and Forest Red-tailed Black Cockatoos. Clearing is unlikely to have a significant impact and a referral under the EPBC is not likely to be required;
- The development will maintain ecological linkage through the east-west creekline;
- Development will provide additional protection from potential contaminants from first flush event by installing appropriate stormwater controls in accordance with the LWMS while maintaining the hydrological regime of overland flow to the creekline in higher rainfall events;
- The Resource Enhancement wetlands and creekline have been individually assessed to determine appropriate buffers and foreshore setbacks;
- A 15m buffer to the wetlands combined with fencing around the buffers and a hard edge such as a road or fire track, supported by appropriate stormwater management measures designed to improve water quality, collectively provide an integrated approach to wetland protection which will result in the enhancement of the wetland values;
- Rehabilitation and ongoing weed control may result in improvements to wetland condition such that the wetlands develop attributes more representative of Conservation Category Wetlands.;
- The foreshore reserve width of 20m and 11m channel width as determined by the 10% AEP tot total 30m provide adequate protection to the creekline and maintains the continuity of management of wetlands and the waterway across the development;
- The creekline and foreshore are in Degraded to Completely Degraded condition, so the degraded creekline will be partially reconfigured to a living stream to ensure the creekline has enhanced water capacity for stormwater and improved environmental values and ecological function; and
- Implementation of foreshore management and rehabilitation measures within the foreshore to the creekline/living stream will improve the environmental function of the watercourse.

The considerations for the design of the development include rehabilitation of the Resource Enhancement Wetlands, living stream and associated buffers and foreshore to improve the ecological linkage it provides. Additionally formalising stormwater controls to manage runoff into the creekline in accordance with Better Urban Water Management. Mature trees should be retained where possible.

5.2 Conclusion

The Environmental Assessment of the Hatch Court Light Industrial Precinct concludes that development of the site is not constrained by any environmental factor.

Additional management of the following factors will be required in future stages:

- Rehabilitation and management of the creekline and wetlands;
- Tree retention strategy;
- Urban Water Management Plans in accordance with *Better Urban Water Management*;
- If required further investigation and possibly management for Acid Sulphate Soils;
- Fauna management and relocation plans; and
- Dust Management Plans.

1 Aboriginal Cultural Heritage (ACH) Register in Custom search area - Polygon - 115.998059711699°E, 31.9305438329691°S (GDA94) : 116.000205478911°E, 31.928813780358°S (GDA94) : 115.999025306945°E, 31.9278303675207°S (GDA94) : 116.001771888976°E, 31.9254810609465°S (GDA94) : 116.005290947204°E, 31.9284131319531°S (GDA94) : 116.000355682616°E, 31.9325652216221°S (GDA94) : 116.000377140288°E, 31.9325470111118°S (GDA94) : 115.998059711699°E, 31.9305438329691°S (GDA94)

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the *Aboriginal Heritage Act 1972*.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

South West Settlement ILUA Disclaimer

Your heritage enquiry is on land within or adjacent to the following Indigenous Land Use Agreement(s): Whadjuk People Indigenous Land Use Agreement.

On 8 June 2015, six identical Indigenous Land Use Agreements (ILUAs) were executed across the South West by the Western Australian Government and, respectively, the Yued, Whadjuk People, Gnaala Karla Booja, Ballardong People, South West Boojarah #2 and Wagyl Kaip & Southern Noongar groups, and the South West Aboriginal Land and Sea Council (SWALSC).

The ILUAs bind the parties (including 'the State', which encompasses all State Government Departments and certain State Government agencies) to enter into a Noongar Standard Heritage Agreement (NSHA) when conducting Aboriginal Heritage Surveys in the ILUA areas, unless they have an existing heritage agreement. It is also intended that other State agencies and instrumentalities enter into the NSHA when conducting Aboriginal Heritage Surveys in the ILUA areas. It is recommended a NSHA is entered into, and an 'Activity Notice' issued under the NSHA, if there is a risk that an activity will ‘impact’ (i.e. by excavating, damaging, destroying or altering in any way) an Aboriginal heritage site. The Aboriginal Heritage Due Diligence Guidelines, which are referenced by the NSHA, provide guidance on how to assess the potential risk to Aboriginal heritage.

Likewise, from 8 June 2015 the Department of Energy, Mines, Industry Regulation and Safety (DEMIRS) in granting Mineral, Petroleum and related Access Authority tenures within the South West Settlement ILUA areas, will place a condition on these tenures requiring a heritage agreement or a NSHA before any rights can be exercised.

If you are a State Government Department, Agency or Instrumentality, or have a heritage condition placed on your mineral or petroleum title by DEMIRS, you should seek advice as to the requirement to use the NSHA for your proposed activity. The full ILUA documents, maps of the ILUA areas and the NSHA template can be found at https://www.wa.gov.au/organisation/department-of-the-premier-and-cabinet/south-west-native-title-settlement.

Further advice can also be sought from the Department of Planning, Lands and Heritage via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- Boundary Reliable (Yes/No): Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- Boundary Restricted = No: Represents the actual location of the ACH as understood by the Department..
- Boundary Restricted = Yes: To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- Culturally Sensitive = No: Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- Culturally Sensitive = Yes: Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- Culturally Sensitive Nature:
  - No Gender / Initiation Restrictions: *Anyone* can view the information.
  - Men only: Only *males* can view restricted information.
  - Women only: Only *females* can view restricted information.

Status:

- Register: Aboriginal cultural heritage places that are assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- Lodged: Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972.*
- Historic: Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the *Aboriginal Heritage Act 1972*. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

Coordinates

Map coordinates are based on the GDA 2020 Datum.

The ILUAs bind the parties (including 'the State', which encompasses all State Government Departments and certain State Government agencies) to enter into a Noongar Standard Heritage Agreement (NSHA) when conducting Aboriginal Heritage Surveys in the ILUA areas, unless they have an existing heritage agreement. It is also intended that other State agencies and instrumentalities enter into the NSHA when conducting Aboriginal Heritage Surveys in the ILUA areas. It is recommended a NSHA is entered into, and an 'Activity Notice' issued under the NSHA, if there is a risk that an activity will ‘impact’ (i.e. by excavating, damaging, destroying or altering in any way) an Aboriginal heritage site. The Aboriginal Heritage Due Diligence Guidelines, which are referenced by the NSHA, provide guidance on how to assess the potential risk to Aboriginal heritage.

Likewise, from 8 June 2015 the Department of Energy, Mines, Industry Regulation and Safety (DEMIRS) in granting Mineral, Petroleum and related Access Authority tenures within the South West Settlement ILUA areas, will place a condition on these tenures requiring a heritage agreement or a NSHA before any rights can be exercised.

If you are a State Government Department, Agency or Instrumentality, or have a heritage condition placed on your mineral or petroleum title by DEMIRS, you should seek advice as to the requirement to use the NSHA for your proposed activity. The full ILUA documents, maps of the ILUA areas and the NSHA template can be found at https://www.wa.gov.au/organisation/department-of-the-premier-and-cabinet/south-west-native-title-settlement.

Further advice can also be sought from the Department of Planning, Lands and Heritage via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- Boundary Reliable (Yes/No): Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- Boundary Restricted = No: Represents the actual location of the ACH as understood by the Department..
- Boundary Restricted = Yes: To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- Culturally Sensitive = No: Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- Culturally Sensitive = Yes: Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- Culturally Sensitive Nature:
  - No Gender / Initiation Restrictions: Anyone can view the information.
  - Men only: Only males can view restricted information.
  - Women only: Only females can view restricted information.

Status:

- Register: Aboriginal cultural heritage places that are assessed as meeting Section 5 of the Aboriginal Heritage Act 1972.
- Lodged: Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the Aboriginal Heritage Act 1972.
- Historic: Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the Aboriginal Heritage Act 1972. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the Aboriginal Heritage Act 1972.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

South West Settlement ILUA Disclaimer

Your heritage enquiry is on land within or adjacent to the following Indigenous Land Use Agreement(s): Whadjuk People Indigenous Land Use Agreement.

On 8 June 2015, six identical Indigenous Land Use Agreements (ILUAs) were executed across the South West by the Western Australian Government and, respectively, the Yued, Whadjuk People, Gnaala Karla Booja, Ballardong People, South West Boojarah #2 and Wagyl Kaip & Southern Noongar groups, and the South West Aboriginal Land and Sea Council (SWALSC).

The ILUAs bind the parties (including 'the State', which encompasses all State Government Departments and certain State Government agencies) to enter into a Noongar Standard Heritage Agreement (NSHA) when conducting Aboriginal Heritage Surveys in the ILUA areas, unless they have an existing heritage agreement. It is also intended that other State agencies and instrumentalities enter into the NSHA when conducting Aboriginal Heritage Surveys in the ILUA areas. It is recommended a NSHA is entered into, and an 'Activity Notice' issued under the NSHA, if there is a risk that an activity will ‘impact’ (i.e. by excavating, damaging, destroying or altering in any way) an Aboriginal heritage site. The Aboriginal Heritage Due Diligence Guidelines, which are referenced by the NSHA, provide guidance on how to assess the potential risk to Aboriginal heritage.

Likewise, from 8 June 2015 the Department of Energy, Mines, Industry Regulation and Safety (DEMIRS) in granting Mineral, Petroleum and related Access Authority tenures within the South West Settlement ILUA areas, will place a condition on these tenures requiring a heritage agreement or a NSHA before any rights can be exercised.

If you are a State Government Department, Agency or Instrumentality, or have a heritage condition placed on your mineral or petroleum title by DEMIRS, you should seek advice as to the requirement to use the NSHA for your proposed activity. The full ILUA documents, maps of the ILUA areas and the NSHA template can be found at https://www.wa.gov.au/organisation/department-of-the-premier-and-cabinet/south-west-native-title-settlement.

Further advice can also be sought from the Department of Planning, Lands and Heritage via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.

DBCA Flora Database Searches

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
514217	3219	Acacia anomala	T	Flowers yellow.	In laterite.			Common name `Chittering Grass Wattle'.	10/09/1985
2239671	3219	Acacia anomala	T	Rhizomatous shrub to 0.5 m.	Gravelly loam, steep slope.	Eucalyptus marginata - E. calophylla woodland.			11/09/1991
804967	3219	Acacia anomala	T	Slender form full flower and a grasslike shrub to 40 cms.	Steep slope SSE aspect near crest. Loam over gravel.	In Eucalyptus marginata 10 m, Euc. calophylla -12 m woodland with scattered Casuarina fraserana to 50 m, Xanthorrhea preissii -3 m, over Low Scrub of Hakea undulata, Hakes amplexicaulis and Dense Low Heath.			2/09/1982
737089	3219	Acacia anomala	T	Slender form, full flower, grasslike shrub to 40 cm.	Steep slope, SSE aspect, crest of N side of gully. Brown sandy loam.	Growing in E. marginata, E. calophylla, Casuarina fraserana over low shrub over dense low heath.			2/09/1982
9669183	3220	Acacia aphylla	T	Shrub to 2 m.	S facing slope. Soil: brown sandy loam with gravel.	Jarrah/marri forest with shrub understorey.	2 plants.		17/11/2023
920894	3220	Acacia aphylla	T						/06/1974
116351	3220	Acacia aphylla	T	Sturdy shrub to 1.5 m, flowers yellow, single, globular leafless, dichotomously branched.	Granite.				5/08/1970
5880491	3220	Acacia aphylla	T		Slope. Moist - dry, brown clay loam. Granite - boulder.	Muir's: scattered marri on road verge. Hakea incrassata, H. erinacea, H. petiolaris, Dryandra armata, D. lindleyana, Nemcia sp., Xanthorrhoea preissii.	6 mature plants, 8 seedlings.		11/07/2001
1189018	3220	Acacia aphylla	T		Growing on road verge.				30/12/1987
9784055	3220	Acacia aphylla	T	Erect shrub 1.7 m high with yellow flowers. Flower in bud and early flowering stage.	On north and south verges.	Eucalyptus marginata and Corymbia calophylla open woodland 10-30 m, 0.25-20% on south side, grading to granite heathland to the north.	4 plants.		7/07/2020
9784233	3220	Acacia aphylla	T	Erect shrub 1.7 m high with yellow flowers. Flower in bud and early flowering stage.	On north and south verges.	Eucalyptus marginata and Corymbia calophylla open woodland 10-30 m, 0.25-20% on south side, grading to granite heathland to the north.	4 plants.		7/07/2020
8273553	3237	Acacia benthamii	2	Slender erect open shrub 70 cm high x 50 cm wide. In bud.	Slope above creek. Grey sand.	Degraded Tuart open woodland over Banksia low woodland.	scattered shrubs.		8/07/2007

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
7485263	11229	Acacia drummondii subsp. affinis	3	Erect, perennial shrub up to 1 m high. Flowers yellow.	Hillside. Clay, rocky. In disturbed soil on road verge.	Medium trees, Marri.	21-50 plants.	Adult population. Percentage of plants flowering 90%.	25/06/2006
126209	3373	Acacia horridula	3	Flowers pale lemon. Height 1 - 2 ft.	Gravel.				5/06/1977
607509	14129	Acacia oncinophylla subsp. oncinophylla	3	Flowers yellow.					/09/1919
607592	14129	Acacia oncinophylla subsp. oncinophylla	3						30/09/1901
607614	14129	Acacia oncinophylla subsp. oncinophylla	3						/09/1916
607495	14129	Acacia oncinophylla subsp. oncinophylla	3	Shrub 4 - 6 ft.					/10/1939
607576	14129	Acacia oncinophylla subsp. oncinophylla	3						/01/1979
607541	14129	Acacia oncinophylla subsp. oncinophylla	3	Shrub to 1 m with many more or less erect branches; flowers yellow.	Near granite.				8/09/1961
5082846	14129	Acacia oncinophylla subsp. oncinophylla	3		Grey-brown gritty loam, with lateritic gravel and cobbels on surface, on a gentle-steep midslope.	Grevillea endilcheriana Low Scrub, over Trymalium lidifolium, Baeckea camphorosmae Dwarf Scrub, over Borya sphaerocephala Dense Herbs.			18/09/1996
7373856	14129	Acacia oncinophylla subsp. oncinophylla	3	Prostrate.	Numerous outcrops. Lower slope. Granite. Sandy loam with quartz.	Open heath.	2 plants.	Healthy population low disturbance.	4/10/2005
6921965	14129	Acacia oncinophylla subsp. oncinophylla	3	Shrub.	S facing slope. Brown loam and granite. Burnt 1989.	Open woodland of Marri and Wandoo over heath to 1 m. Darwinia pimelioides, Daviesia horrida, Trymalium ledifolium, Hakea cristata, Diplolaena sp., Phyllantus calycinus. Area weedy.			17/08/1992
607584	14129	Acacia oncinophylla subsp. oncinophylla	3	3 ft high. Flowers yellow.	Granite.	Heath.	scarce.		26/09/1977
607649	14131	Acacia oncinophylla subsp. patulifolia	4						/08/1971
4570502	14131	Acacia oncinophylla subsp. patulifolia	4	Shrub 2-3 ft (0.6-0.9 m).	Open position, heavy soil, base of Darling Scarp.				21/09/1946

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
5097444	14131	Acacia oncinophylla subsp. patulifolia	4		Dark brown gritty loam, with surface gravel and cobbels on a very steep southern upper slope.	Grevillea endlicheriana, Hakea undulata Open Low Scrub, over Trymalium ledifolium, Hakea undulata mixed Dense Low Heath, over Amphipogon turbinata Low Grass, over Gonocarpus cordiger Very Open Herbs.			24/09/1996
8256136	18195	Amanita carneiphylla	3	Pileus up to 165 mm diameter, white, hemispheric when young applanate when mature, non-strate appendiculate margin, slightly viscid, no odour, context white, unchanging. Universal veil on the pileus: white, adnate, initially covering the whole pileus the	On Karrakatta sand. Emerging from deep sand.	Degraded Banksias woodland. Species of plants nearby: Jacksonia furcellata.	3 collected.	Microscopic character details housed with specimen. Gill piece taken for sequencing 27.1.13. - E. Davison.	15/06/2002
2224283	46334	Amanita kalamundae	3		In deep litter.	Under Eucalyptus patens and Agonis eriafolia.		MU89/110. Sporeprint.	18/06/1989
8774773	48332	Amanita preissii	3	Pileus to 48, 60 mm diameter, 4, 5 mm thick, white, plane with slightly depressed centre, margin appendiculate, context white, yellowing beneath pellis. Universal veil on pileus of thin layer over whole disc, breaking into small warts in centre of disc,		Garden of WA plants. Nearby woody plants: Eucalyptus spp., Calitris sp., Actinostrobus sp, Hemiandra sp.	single specimen.	Sequences for GenBank: ITS, nuLSU, BTUB, EF, RPB2.	22/05/2005
9327231	6309	Andersonia gracilis	T	Scraggly shrub with blue-green leaves and pink flowers.	Plain, brown sandy clay loam.	Tall open shrubland of Callitris pyramidalis over mid sparse shrubland of Beaufortia squarrosa and Petrophile seminuda over low sparse shrubland of Hypocalymma angustifolium subsp. Swan Coastal Plain (G.J. Keighery 16777). Some minor weeds present.	c. 15 plants seen at this location.		22/10/2019

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
7129238	6946	Anthocercis gracilis	T		Slope - outcrop. Moist brown loam-clay, granite boulder. Burnt by wildfire in Summer 1996/97 and Summer 2003/04.	Marri and Wandoo open woodland. Macrozamia riedlii, Xanthorrhoea preissii, Hakea cristata, Acacia pulchella, Pimelea ciliata, Trymalium ledifolium, Rulingia cygnorum, Hibbertia hypericoides, Dryandra lindleyana, Darwinia citriodora, Caladenia sp., Diuris	1500+ mature plants.	Substantial weed invasion following a wildfire in the summer of 2003.	21/07/2005
9590692	6946	Anthocercis gracilis	T	Slender, sprawling shrub to 1.5 m tall. When flowering, petals pale yellow with a purple stripe down middle, purple at base.	SE facing slope. Uphill from creekline. Soil: Dark brown sandy loam.	Eucalyptus woodland with mid-dense shrubs to 1.5 m, with Banksia (Dryandra) sp., Macrozamia sp., Pimelea sp., Acacia sp., Xanthorrhoea preissii, Orthrosanthus laxus, Hakea lissocarpha, Eucalyptus wandoo, Corymbia calophylla, Trymalium [odoratissimum].	>100 plants.		16/12/2022
1059238	6946	Anthocercis gracilis	T			Growing in understorey.			15/08/1984
1059211	6946	Anthocercis gracilis	T	Straggling herb to 60 cm tall.					19/05/1984
5208963	6946	Anthocercis gracilis	T		Red-brown clayey loam, with dolerite cobbels and boulders, on a very steep south-eastern lower slope.	Eucalyptus laeliae, E. calophylla, E. wandoo Low Woodland, over Trymalium floribundum, Xanthorrhoea preissii Dense Heath, over Macrozamia reidlii, Phyllanthus calycinus Low Heath, over Loxocarya flexuosa Tall Sedges.			8/10/1996
5462096	6946	Anthocercis gracilis	T		Aspect S. Slope/outcrop/drainage line. Moist/dry red/brown/yellow loam/clay. Granite sheet/boulder. At times plants can be seen beside the walk trail W and growing to within 10 m of the water.	(Muir's) Regrowth marri and wandoo open woodland. Associated species: Acacia pulchella, Pimelea ciliata, Darwinia citriodora, Grevillea manglesii sp., G. bipinnatifida, Zamia, Hovea pungens, Daviesia horrida, Hakea cristata, Calothamnus sp.		Condition of population: healthy/moderate/ poor.	21/10/1999
7185308	6946	Anthocercis gracilis	T		Outcrop, slope, gully with granite sheet and boulders, granitic sand and dry brown loam. Burnt in summer of 2004/2005.	Scattered marri with Hakea crystata, Xanthorrhoea preissi, Acacia pulchella, Diplopeltis huegelii, Grevillea manglesii, Goodenia fasciculata and Hibbertia hypericoides. Massive infestation of Watsonia weeds.	30 mature plants over 10 m NS x 5 m EW.		29/08/2005

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
9689222	6946	Anthocercis gracilis	T	Slender, multi-branched, low spreading shrub to 45 cm high, 80 cm wide. Cream-green and purple, pendulous flowers.	South facing gentle slope leading to Jane Brook with small granite outcrops.	Open Eucalyptus wandoo and Eucalyptus marginata woodland over Trymalium odoratissimum, Xanthorrhoea preissii, Hibbertia hypericoides shrubland.		Last burnt in October 2018 prescribed burn (ca. 4.5 YSLF).	7/07/2023
8738378	6946	Anthocercis gracilis	T	Slender, inconspicuous, intricately branched shrub. Fairly short-lived, growing and flourishing after fire. Flowers delicate hanging yellow bells.	Granitic loam, among granite boulders.	Under Rock Sheoak, with Balga, Warrine, Zamia and Forest Rice-grass.		Flowers in spring. Fire response - seeder.	23/09/1995
493376	7849	Asteridea gracilis	3		Rocky.				26/09/1977
9487999	50979	Austrostipa bronweniae	T	Clumped perennial grass to 0.8 m.	Seasonally inundated dampland, flat with sandy clay soil.	Very Open to Closed Tall Heath of Viminaria juncea, Melaleuca acutifolia, M. osullivanii, M. viminea, Callitris pyramidalis, Banksia telmatiaea, Grevillea thelemanniana subsp. thelemanniana, Hypocalymma angustifolium, Acacia lasiocarpa over Very Open to	278 mature and 1 juvenile.	Some plants occur on a walk track. Plants were in poor to moderate condition, looking very brown and dry (natural over-summer senescence?). The population is within a known Muchea Limestone TEC.	9/01/2015

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
8133077	50979	Austrostipa bronweniae	T	Perennial grass, 0.6 m high x 0.3 m wide. Flowers green. Reproductive method: seeds, caespitose.	Wetland. Seasonally waterlogged muddy sand. Burnt ca 3 years ago.	Low trees. With Gahnia trifida, Actinostrobus pyramidalis, Grevillea thelemanniana, Melaleuca viminea subsp. viminea.		Aliens <5% cover. Other alien species: few (1-3). Population structure: immature seedlings and mature plants, 100% flowering. Two other small populations next door at Lot 28 Brook Road.	18/09/2009
8133069	50979	Austrostipa bronweniae	T	Perennial grass, 0.6 m high x 0.3 m wide. Flowers green. Reproductive method: seeds, caespitose.	Wetland. Seasonally waterlogged muddy sand. Burnt ca 3 years ago.	Low trees. With Gahnia trifida, Actinostrobus pyramidalis, Grevillea thelemanniana, Melaleuca viminea subsp. viminea.		Aliens <5% cover. Other alien species: few (1-3). Population structure: immature seedlings and mature plants, 100% flowering. Two other small populations next door at Lot 28 Brook Road.	18/09/2009
8816484	50979	Austrostipa bronweniae	T	Clumping, perennial grass. 0.6 m (in spike to 1.1.m) x to 0.5 m wide.	Dampland. Dry at time of collection. Seasonally wet. Brown to grey sandy clay.	Callitris pyramidalis and Viminaria juncea Tall Open Shrubland over Hypocalymma angustifolium, Grevillea thelemanniana var. thelemanniana, Acacia lasiocarpa, Boronia crenulata, Open Low Heath and Sedgeland/Herbland dominated by Chaetanthus aristatus, Cen	188 mature clumps and 45 juveniles.	Some clumps were in dense heath on the dampland and others were in relatively open sections.	29/10/2013
2474123	32211	Banksia mimica	T	Prostrate dwarf shrub to 15 cm.	In grey sand on slight rise next to flat.	Recently burnt. In heath with emergent Kingia australis, Nuytsia floribunda, Adenanthos cygnorum, Banksia menziesii, Dryandra nivea.		Abundance: occasional	21/03/1990
2474115	32211	Banksia mimica	T	Prostrate dwarf shrub to 25 cm high.	White sand on flat ground.	In very open woodland with heath understory. Banksia attenuata, B. menziesii, Adenanthos cygnorum, Nuytsia floribunda, Casuarina fraseriana, Xanthorrhoea.		Abundance: 20 plants.	4/04/1990

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
9327169	32211	Banksia mimica	T	Prostrate, spreading lignotuberous shrub to 25 cm with yellow flowers.	Flat, grey sand.	Mid sparse shrubland of Allocasuarina humilis and Lambertia multiflora var. darlingensis over low sparse shrubland of Eremaea pauciflora var. pauciflora over mid sparse sedgeland of Cyathochaeta equitans.	4 plants at this location.		18/12/2019
9704744	32211	Banksia mimica	T	Rhizomatous, clumping shrub to 0.40 m high. Upright entire, toothed leaves up to 8 mm wide and yellow/brown flowers at ground level.	Flat palusplain, grey sand.	Occasional Eucalyptus patens and Nuytsia floribunda over Tall Shrubland of Adenanthos cygnorum over Shrubland of Xanthorrhoea preissii, Kingia australis, Eremaea pauciflora, Jacksonia floribunda, Banksia nivea, Bossiaea eriocarpa, Stirlingia latifolia, P	5 plants.	Plant 1. Flower collection taken from Population 15A. Partial survey.	23/01/2024
9704736	32211	Banksia mimica	T	Rhizomatous, clumping shrub to 0.40 m high. Upright entire, toothed leaves up to 8 mm wide and yellow/brown flowers at ground level.	Flat palusplain, grey sand.	Occasional Eucalyptus patens and Nuytsia floribunda over Tall Shrubland of Adenanthos cygnorum over Shrubland of Xanthorrhoea preissii, Kingia australis, Eremaea pauciflora, Jacksonia floribunda, Banksia nivea, Bossiaea eriocarpa, Stirlingia latifolia, P	5 plants.	Plant 2. Flower collection taken from Population 15A. Partial survey.	23/01/2024
4634861	32138	Banksia pteridifolia subsp. vernalis	3						26/09/1989
3358666	32138	Banksia pteridifolia subsp. vernalis	3	Prostrate shrub 40 cm tall x 50 cm wide. New growth pink/brown. No buds, flowers or fruits.	Flat, sandy soils over loamy sands 0.4 m deep.		one group of 5 plants near Casuarina Road.		27/10/1992
3358674	32138	Banksia pteridifolia subsp. vernalis	3	Prostrate shrub to 0.4 m tall by 0.8 m wide.	Flat, grey sand.	Jarrah/Banksia over mixed heath natives.			14/01/1993
6166857	32138	Banksia pteridifolia subsp. vernalis	3		Flat. Dry grey sand. Previously a bridle trail.	Banksia attenuata - Eucalyptus marginata woodland. Lambertia multiflora subsp. darlingensis, Isopogon drummondii, Conospermum undulatum, Hakea ruscifolia, Hypolaena exsulca.	ca 10 plants.		8/08/1998
6038328	32138	Banksia pteridifolia subsp. vernalis	3	Stems underground, resprouting after fire; leaves somewhat glaucous when young; perianth and style pale gold.	On sandy flat.	With low shrubs and occasional Casuarina fraseriana and Eucalyptus marginata.			18/08/1998

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date

8436975	13653	Calytrix breviseta subsp. breviseta	T	Spreading low shrub 0.2-0.4 m high x 0.2-0.6 m wide. Purple-blue flowers. Small angular leaves to 6 mm. Twiggy shrubs.	Edge of seasonal clay base open depression. Moist, grey-brown sand to fine sandy loam over clay.	Tall Open shrubland of Callitris pyramidalus, Viminaria juncea and Melaleuca acutifolia over Open Heath of Hypocalymma angustifolia and Acacia lasiocarpa over Open Sedgeland of Schoenus rigens, Chaetanthus aristatus over Herbland of Centrolepis aristata,	4 plants.		13/09/2012
2074516	759	Carex tereticaulis	3						/10/1903
5392977	759	Carex tereticaulis	3	Grass like herb 1 m high x 0.1 m wide.	Watercourse, wet. Organic litter. Grey Bassendean Sand over sand.	Dense Forest. Eucalyptus rudis, Melaleuca rhaphiophylla.	occasional.		17/05/1999

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
9553371	51734	Commersonia sp. Lesmurdie (A.A. Mitchell 11429)	2	Semi scrambling shrub with white flowers growing up to 1.3 m tall.	Sloping seepage with brown cracking clay soil on basalt sill.	Melaleuca woodland with an understorey of 3 m tall tussocking sedges.	infrequent.		13/11/2022
9553339	51734	Commersonia sp. Lesmurdie (A.A. Mitchell 11429)	2	Erect shrub to 1.5 m tall. Flowers whitish/cream calyx and petals. Early fruiting.	On a hillside of brown cracking clay soil on a basalt sill/dyke.	Occurs in tall Melaleuca woodland with 3 m tall tussocking sedges and Lasiopetalum bracteatum.			/12/2023
2159597	13999	Conospermum undulatum	T	Shrub to 2 m. Leaf margins undulate. Inflorescences emergent above branches.	Low rise, grey sand.	In Banksia open low woodland A over Low scrub A and Low heath D.			24/10/1990
2159627	13999	Conospermum undulatum	T		Clayey sand over gravel.	Open woodland of Eucalyptus marginata, E. calophylla over open low scrub A of Hakea sp., over dense low heath c.		Abundance: 500 + plants.	/09/1990
2159570	13999	Conospermum undulatum	T	Erect shrub. Several plants with less undulate leaves intermixed with norma; undulate type.	Grey sand over yellow sand.	Dense low heat C of Pericalymma ellipticum.			12/11/1990
1409395	13999	Conospermum undulatum	T	Small compact shrub to 1.5 m.					20/10/1977
3136973	13999	Conospermum undulatum	T	1.00 m height.	Grey sandy soils, bottom of Darling Scarp.	0.5 -1.0 m open heathland not burnt. Banksia sp.		Abundance: frequent.	25/08/1993
1409379	13999	Conospermum undulatum	T						/06/1901
2159619	13999	Conospermum undulatum	T		Yellow-orange clayey sand over gravel.	With Banksia menziesii, B. attenuata, Eucalyptus marginata, Isopogon drummondii, Hakea conchifolia.		Abundance: 50 + plant in flower.	6/10/1990
2159783	13999	Conospermum undulatum	T		Yellow sand over laterite.	With Allocasuarina fraserina, A. humilis, Eucalyptus marginata, Banksia grandis, B. menziesii, Lambertia multiflora, Hakea conchifolia, Isopogon drummondii, B. incana.		Abundance: 50 plants	6/10/1990
1409387	13999	Conospermum undulatum	T	Multistemmed shrub, 4 ft tall.	On gravel at base of scarp.				/08/1971
2159732	13999	Conospermum undulatum	T		Yellow-grey sand, flat.	Banksia attenuata - B. menziesii Low Woodland A over open Low Scrub B.		Abundance: 400 + plants	14/10/1990
4612698	13999	Conospermum undulatum	T						20/10/1992

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
2160013	13999	Conospermum undulatum	T	Narrow, erect shrub. Leaves distinctly undulate. Inflorescences emergent above branches.	Grey-white sand over laterite. Flat to gradual slope.	Banksia attenuata, B. menziesii Low Woodland over dwarf scrub and low heath.		Abundance: c. 1000-1500 plants	19/10/1990
5314054	13999	Conospermum undulatum	T	Sprawling shrub 1 m tall.	Low plain/swamp. White-grey sand. Bassendean-Southern River complex. Seasonal dampland. Probably burnt within last 5 years.	Heath B/Open low sedges/Open herbs with Melaleuca preissiana, Stirlingia latifolia, Anigozanthos manglesii, A. viridis, Mesomelaena tetragona, Dasypogon bromeliifolius.	1 plant.		21/01/1999
2159589	13999	Conospermum undulatum	T		Yellow sand over laterite.	Open low woodland of Allocasuaring fraserina and Eucalyptus marginata over dense low heath C of Lambertia multiflora with some Banksia incana.		Abundance: 800 + plants	6/10/1990
2159643	13999	Conospermum undulatum	T		Grey sand over yellow sand.	Open low woodland of Allocasuarina fraseriana, Banksia attenuata over heath B over low heath C. Lambertia multiflora, Hakea conchifolia, Adenanthos cygnorum, Isopogon drummondii.		Abundance: 50 + flowering plants	14/10/1990
2159694	13999	Conospermum undulatum	T		White-grey sand over yellow sand.	Low woodland A over dense low heath C. With Banksia menziesii, B. attenuata, Eucalyptus todtiana, Lambertia multiflora, Isopogon drummondii, Eremaea paucilfora.		Abundance: 500 + plants in flower.	6/10/1990
2159651	13999	Conospermum undulatum	T		Yellow clayey sand over gravel.	Surrounded by dense low heath.		Abundance: 50 + plants	14/10/1990
2159724	13999	Conospermum undulatum	T		Sand and gravel, flat.	In Banksia - Eucalyptus low forest B over open low scrub A over dense low heath C. Lambertia multiflora and Isopogon drummondii.		Abundance: 100 + plants	7/10/1990
2159791	13999	Conospermum undulatum	T	Shrub to 0.75 m, leaves undulate. Inflorescences erect above braches. Full flower.	Grey sand, flat.	Regenerating Eucalyptus marginata, Banksia menziesii, B. attenuata woodland over heath B.		Abundance: 50-60 plants	7/11/1990
2159678	13999	Conospermum undulatum	T		Grey sand.	In low forest A over low heath C. Associated species, Banksia menziesiim Eucalyptus marginata, Allocasuarina fraseriana, Lambertia multiflora, Isopogon drummondii.		Abundance: 15 flowering plants.	7/10/1990
2159600	13999	Conospermum undulatum	T		Flat, sand with gravel.	Low forest A of Banksia attenuata, B. menziesii and Allocasuarina fraseriana. In association with Lambertia multiflora and Isopogon drummondii.			12/11/1990

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
2159635	13999	Conospermum undulatum	T		Flat land on orange-yellow clayey sand over laterite.	In open low woodland of Eucalyptus marginata, E. calophylla over dense low heath.		Abundance: 2000 + plants.	/09/1990
1814214	13999	Conospermum undulatum	T	Erect woody shrub, to 1.5 m. Flowers white-grey, in full flower.	Deep yellow sand.	Low open Banksia woodland.			15/09/1984
2160005	13999	Conospermum undulatum	T	Erect shrub, leaves with undulate margins. Inflorescences emergent above branches.	Brown-grey sand, flat to gentle slope.	Banksia attenauta, B. menziesii low forest over low heath.			12/11/1990
1409298	13999	Conospermum undulatum	T	"Smoke Bush".				"Smoke Bush".	11/10/1918
2161478	13999	Conospermum undulatum	T	Low shrub to 0.6 m. Leaves onl slightly undulate.	Low lying flat, brown sand.	Regenerating Pericalymma ellipticum Dense Heath A.		Abundance: 2 plants	7/11/1990
1409344	13999	Conospermum undulatum	T		On sand.	Jarrah-sheoak association.			22/08/1961
5057493	13999	Conospermum undulatum	T		Red gravelly clay, with lateritic gravel, on a gentle northern lower slope.	Eucalyptus marginata, E. calophylla Open Low Woodland, over Hakea lissocarpha, Acacia pulchella, Xanthorrhoea preissii Dense Low Heath, over Conostylis setigera, Mesomelaena tetragona Open Tall Sedges.			20/09/1996
5299535	13999	Conospermum undulatum	T		NNW aspect. Slope. Dry yellow/grey sand.	(Muir's) Jarrah, marri and Allocasuarina fraseriana woodland. Hakea trifurcata, H. conchifolia, H. ruscifolia, H. lissocarpha, H. stenocarpa, Isopogon dubius, I. drummondii, Xanthorrhoea preissii, X. gracilis, Lambertia multiflorus, Hibbertia hypericoide			23/09/1998
5299527	13999	Conospermum undulatum	T		N-W aspect. Slope. Dry brown/yellow/grey sand/loam/clay/gravel.	(Muir's) Jarrah, Marri open woodland. Xanthorrhoea preissii, X. gracilis, Acacia pulchella, Dryandra lindleyana, Hakea ruscifolia, H. undulata, H. lissocarpha, Zamia, Hibbertia hypericoides, Daviesia decurrens, Leschenaultia biloba, Sedge sp., Hypocalymm			23/09/1998

4072324	13999	Conospermum undulatum	T	Shrub to 1.5 m, seed.	Light grey sandy soil, slight rise.	Banksia woodland, closed understory, not burnt.		Locally common.	14/12/1994

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
6936768	13999	Conospermum undulatum	T	Perennial, spreading, open shrub, 1 m x 1 m, with white flowers.	Gentle slope at foot of Darling Scarp in reserve which was once a gravel pit, on lateritic gravel. Burnt March 2004.	Regrowth open Jarrah-Marri woodland with Hakea trifurcata, Xanthorrhoea preissii, Calothamnus sanguineus, Hibbertia hypericoides and fringing Dryandra sessilis thicket.	several plants in one area only.	Leaves only collected. Older plants are just beyond the limit of the fire but there seem to be regrowths in burnt area.	31/10/2004
2159759	13999	Conospermum undulatum	T		Grey sand over yellow sand.	Low woodland A of Eucalyptus marginata, Allocasuarina fraserina, Banksia menziesii, over open low scrub of Lambertia multiflora with Isopogon drummondii over dense low heath C		Abundance: 100 + plants in flower.	14/10/1990
2159686	13999	Conospermum undulatum	T		Grey sand over yellow sand.	Low woodland A (Banksia menziesii, Eucalyptus marginata, Allo- casuarina fraseriana over dense low heath.	300+ plants in flower.		14/10/1990
1409360	13999	Conospermum undulatum	T	Shrub 1 - 1.5 m high with grey flowers.	Sandy soil. Melaleauca flats often swampy.	Restionaceae, Cyperaceae, Acacia, Hakea, etc occurring.			6/09/1976
1409336	13999	Conospermum undulatum	T	Erect shrub 1 m. Flowers grey.					5/10/1978
1409328	13999	Conospermum undulatum	T	Shrub 1 - 1.5 m high with greyish flowers.	White sandy soils.	Among tall Banksias, with Gompholobium, Hibbertia, Acacia, etc.			6/09/1976
2159740	13999	Conospermum undulatum	T		Yellow clayey sand over gravel.	Low Woodland A of Eucalyptus marginata and E. calophylla over heath B of Lambertia multiflora over low heath C.		Abundance: Less than 10 flowering plants.	14/10/1990
2161451	13999	Conospermum undulatum	T		Grey sand over laterite, flat.	Open low woodland A of Eucalyptus marginata, E. calophylla, Banksia menziesii and B. attenuata over dense heath B.		Abundance: 100-150 plants.	23/04/1990
4219309	13999	Conospermum undulatum	T	Erect shrub to 1.5 m.	Grey sand.	Open woodland, Eucalyptus marginata, Banksia attenuata, Banksia menziesii, Stirlingia latifolia, Hibbertia hypericoides.		Abundance: c. 50 plants	8/11/1994
4221419	13999	Conospermum undulatum	T	Shrub to 1.5 m. Flowers smokey-white, in full flower.	Yellow sand, colluvial.	Banksia menziesii/attenuata low forest.	scattered in area.		20/08/1991
5132525	13999	Conospermum undulatum	T	Woody, open, few stemmed shrub to 1m high, perianth segments black, leaves basal.	On small unfenced suburban block. Grey sandy soil.	With Eucalyptus marginata and shrub understorey including Casuarina, Lambertia, Dasypogon, Hibbertia spp.			3/10/1996

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
6797083	13999	Conospermum undulatum	T		Small rise at base of Darling Scarp. Dry, yellow-grey sand.	Woodland over shrubland. Associated species: Alexgeorgea nitens, Daviesia nudiflora, Dryandra lindleyana, Pityrodia bartlingii, Hakea ruscifolia, Hibbertia hypericoides, Jarrah, Marri, Bossiaea eriocarpa.	177 mature plants in area 165 x 30 m.	Condition of population: healthy.	9/03/2005
7892853	13999	Conospermum undulatum	T	Straggling, multi-stemmed shrub to 1.4 m; leaves crowded at ends of bare branches. Inflorescences and flowers white-woolly, the perianth black inside.	Sandplain - Bassendean Sand.	Jarrah-Marri-Banksia attenuata-Adenanthos cygnorum heathy woodland.	frequent but localised.		11/08/2007
7274459	13999	Conospermum undulatum	T	Multi-stemmed erect shrub 1-1.5 m high. Flowers silvery-white; in flower.	Edges of and shallow sandy rises. Grey sand over clay.	Disturbed ? Banksia low woodland.	only 2-5 plants in area.		15/10/2005
6234747	13999	Conospermum undulatum	T	Erect shrub.	Plain. Grey sand.		scattered with a range of maturity. 37 plants including 4 very small ones.	Plants in very healthy habitat.	7/10/2003
6234755	13999	Conospermum undulatum	T	Erect shrub. Plants flowering but many have lost buds.	Watercourse. Grey sand.		locally common.		7/10/2003
6723624	13999	Conospermum undulatum	T		Sandy soil. Not burnt.	Banksia woodland.			//
6723632	13999	Conospermum undulatum	T			Burnt and regenerating.			//
6723705	13999	Conospermum undulatum	T			Regrowth.			//
6723713	13999	Conospermum undulatum	T						//
6112919	13999	Conospermum undulatum	T	Shrub to 1.5 m tall. Undulate leaves.	Flat. White sand.	Banksia woodland. Associated species: Allocasuarina huegeliana, A. fraseri, Banksia attenuata, Hibbertia sp., Daviesia sp., Adenanthos sp., Lambertia multiflora var. darlingensis.	100+.		1/11/2001

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
5586712	13999	Conospermum undulatum	T		Low lying plain, swamp-like in winter. Moist white-grey sand-clay over laterite. Plants begin ca 500 m N of Tonkin Highway intersection along road verge and into private property behind verge into bush.	Associated vegetation: Eucalyptus todtiana, Melaleuca, Allocasuarina, Banksia.		Condition of population: moderate.	14/01/1999
5815762	13999	Conospermum undulatum	T		Flat. Dry grey sand.	Associated species: Banksia sp., Allocasuarina humilis, sedges, Daviesia sp., Dryandra lindleyana, Xanthorrhoea preissii.		Condition of population: healthy.	9/04/2001
6511473	13999	Conospermum undulatum	T	Flowers white.	Dune Ridge; flat ground. Brown sand over yellow sand, well drained.	Associated species: Banksia menziesii.			10/11/1995
6950906	13999	Conospermum undulatum	T		Gently sloping dune with grey over yellow sand.	Woodland over shrubland with Allocasuarina fraseriana, Banksia attenuata, Banksia menziesii, Xanthorrhoea preissii, Dryandra lindleyana, Lambertia multiflora var. darlingensis, Isopogon drummondii, Caustis dioica, Hakea prostrata and Daviesia nudiflora.	39 mature plants over ca 300 m x 50 m in area.	Central population in very good condition, remainder in degraded condition with weeds.	27/01/2005
7193920	13999	Conospermum undulatum	T		Sand over laterite.	With Stirlingia latifolia, Allocasuarina fraseriana, Corymbia calophylla, Dryandra sessilis, Grevillea wilsonii, Hakea stenocarpa, Petrophile striata, Hibbertia hypericoides, Hypocalymma robustum, Philotheca spicata, Haemodorum paniculatum, Conostylis ca			9/09/2005
7373821	13999	Conospermum undulatum	T		Sand dune. Grey sand.	Open Banksia woodland with Eucalyptus marginata, Corymbia calophylla, Banksia attenuata, B. menziesii, B. grandis, Stirlingia latifolia.			26/11/2002
2159996	13999	Conospermum undulatum	T	Erect, narrow shrub 1.2 m high.	Grey sand over laterite on flat terrain.	Woodland and heath with Banksia attenuata, B. menziesii, Allo- casuarina fraseriana, Isopogon drummondii.	frequent-occasional.		23/04/1990

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
8134162	13999	Conospermum undulatum	T	Perennial shrub, 0.80 m high x 0.20 m wide. Flowers white.	Plain. Dry grey soil. Old soil disturbance.	Medium trees. With Banksia menziesii, Allocasuarina fraseriana, Xanthorrhoea preissii, Conostylis aculeata, Anigozanthos manglesii, Adenanthos cygnorum.	6-20 plants, 10 mature plants.	Population structure: adult, 100% in bud, 50% flowering. Other alien species: many (4 or more). Total weed cover: up to 25% of site.	24/07/2009
8863830	13999	Conospermum undulatum	T	Erect compact shrub, 0.8 m high with old flowering scapes, leaves narrowly linear to 10 mm wide, tapering to base, distinctly undulating leaf margins.	In grey sand on flat, well-drained site. Frequent slashing between bushland remnants.	Woodland of Eucalyptus marginata over Low Closed Forest of Banksia menziesii, Allocasuarina fraseriana, Agonis flexuosa (naturalised from planting) over Shrubland of Adenanthos cygnorum, Lambertia multiflora, Daviesia divaricata over Low Shrubland of All	2 plants only.		7/12/2016
7684088	13999	Conospermum undulatum	T		Slope. Brown sand.	Low Woodland of mixed species including Bossiaea eriocarpa, Banksia menziesii, Eucalyptus marginata over Open Low Heath of mixed species dominated by Eremaea pauciflora, Allocasuarina humilis, Xanthorrhoea preissii and Lambertia multiflora var. darlingen		Healthy population.	22/09/2004
7888198	13999	Conospermum undulatum	T	Shrub.	Flat. Grey sand.	Low woodland (Disturbed). Banksia attenuata, Banksia menziesii, Banksia ilicifolia, Hibbertia subvaginata, Dasypogon bromeliifolius, Melaleuca seriata, Lyginia barbata, Patersonia occidentalis.			21/08/2002
7888201	13999	Conospermum undulatum	T	Shrub.	Flat. Grey sand.	Woodland. Corymbia calophylla, Banksia attenuata, Banksia menziesii, Melaleuca preissiana, Xanthorrhoea preissii, Hypocalymma angustifolium, Adenanthos obovatus, Regelia ciliata, Jacksonia furcellata.			3/09/2002
7746903	13999	Conospermum undulatum	T	Erect shrub with grey-white flowers 120 cm high. Flowers grey/white.	Grey sand. + 3 years since fire. Disturbed.	Acacia pulchella var. pulchella, Stirlingia latifolia, Desmocladus flexuosus, Corymbia citriodora, Persoonia saccata, Synaphea gracillima, Banksia menziesii, B. attenuata, Chamaecytisus palmensis, Eucalyptus todtiana, Melaleuca sericata and Jacksonia flo	2-5 plants.		21/08/2002

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
8863849	13999	Conospermum undulatum	T	Low compact shrub, 0.5 m high, with old flowering scapes, leaves linear/narrowly elliptic to 20 mm wide tapering to base, undulating margins.	In grey sand on flat, well-drained site. Frequent slashing between bushland remnants.	Disturbed small remnants of Open Woodland of Eucalyptus marginata, Banksia menziesii, Allocasuarina fraseriana over Shrubland of Daviesia divaricata, Xanthorrhoea preissii, Eremaea pauciflora, Hibbertia hypericoides and Very Open Sedgeland of Mesomelaena	1 plant only.		7/12/2016
9006184	13999	Conospermum undulatum	T	Shrub, 1.5 m high x 0.7 m wide. Old flowers.	Flat, with dry grey/brown sandy loam.	Degraded site. Open Jarrah woodland with Banksia sessilis understorey. Associated species: Allocasuarina fraseriana and Grevillea wilsonii.	one plant only.	Not the usual habitat for this species.	15/05/2018
6714595	13999	Conospermum undulatum	T		Slope. Dry brown sand, laterite.	(Muir's) Jarrah and Marri open woodland. Isopogon sp., Grevillea trifurcata, Jacksonia sp., Anigozanthos manglesii, Conostylis sp., Leucopogon pulchellus.	3 plants over 15 m x 15 m.		2/10/2003
950548	50708	Cyanothamnus tenuis	4		Red stony soil.				22/08/1953
950025	50708	Cyanothamnus tenuis	4					Collected in August, no year given.	//
950521	50708	Cyanothamnus tenuis	4						21/08/1954
950513	50708	Cyanothamnus tenuis	4		Wooded hillside.				28/09/1955
1180460	50708	Cyanothamnus tenuis	4	Very spindly and open small shrub to 0.3 m. Flowers pink.	On edge of brook. Slope.	With Eucalyptus overstorey and many introduced weeds - Watsonia etc.		Abundance: occasional.	23/09/1990
5846080	16245	Cyathochaeta teretifolia	3	Clumped rhizomatous herb 1 m high, 10 cm wide.	Tumulus Spring, black peaty sand.	Closed sedgeland ((adjacent). With Melaleuca preissiana, Agonis linearifolia, Astartea aff. fascicularis.		Plants in cleared track, regrowth from rhizome unburnt plants to 1.8 m by 0.5 m; occasional plants flowering.	18/09/1999
4096711	16245	Cyathochaeta teretifolia	3						6/12/1902
1030507	16245	Cyathochaeta teretifolia	3		Swamp.	Habitat of Gahnia.			/12/1901

9517618	5505	Darwinia apiculata	T	Low spreading woody shrubs, c. 0.6 m x 2 m surface area from above. c. 25 cm tall. Leaves linear and apiculate. 3-6 fl. per infl., bracts orange-red-brown-green. Inflorescence sideways to pendulous.	Corymbia woodland, leaf litter over lateritic gravel. Flat undulating landscape.	Corymbia calophylla canopy, Xanthorrhoea procera, X. gracilis, Hibbertia, Banksia sessilis, Conostylis, Burchardia, Acacia, Drosera pallida.	20-40 plants.	Darwinia phylogenomics 2022 sample ID: Dapi_2.	8/09/2022
5962803	5505	Darwinia apiculata	T	Sprawling herb, 5 cm high by 50 cm wide. Flowering; immature fruit.	Gentle slope. Organic litter over brown/yellow clay. Underlying rock granite.	Forest over Open Low Woodland A with Dense Thicket. Characteristic species: Eucalyptus calophylla, E. marginata, Xanthorrhoea preissii and Darwinia citriodora.	common.		10/11/1999
5962811	5505	Darwinia apiculata	T	Sprawling herb, 5 cm high by 50 cm wide. Flowering; immature fruit.	Gentle slope. Organic litter over brown/yellow clay. Underlying rock granite.	Forest over Open Low Woodland A with Dense Thicket. Characteristic species: Eucalyptus calophylla, E. marginata, Xanthorrhoea preissii and Darwinia citriodora.	common.		10/11/1999
7439849	5505	Darwinia apiculata	T		Private land. Hilltop of moist concretionary gravel and laterite.	Open low woodland with associated vegetation: Marri - Jarrah, Dryandra sessilis, Dryandra sp., Conostylis sp, Hardenbergia comptoniana, numerous Orchiaceae spp.	160 mature plants 6 seedlings and 2 dead in area 0.28 acres.	Healthy population with a range of ages. General vegetation in excellent condition. Difficult in many areas to ascertain exactly how many plants are in the larger clumps.	25/07/2006
8439176	5505	Darwinia apiculata	T	Densely branched, low, spreading shrub. 20 cm high x 80 cm wide.	Flat with laterite and brown loam.	Open Eucalyptus woodland, Eucalyptus marginata and Corymbia calophylla over Allocasuarina fraseriana, Banksia sessilis, Xanthorrhoea preissii shrubland. Many weedy and introduced species including Briza maxima, Ursinia anthemoides, Chamaecytisus palmensi	2 plants in a small pocket of 425 sq m.	Isolated from more extensive bushland and a large population by gravel tracks.	10/11/2011

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
8397198	5505	Darwinia apiculata	T	Small compact shrub to 40 cm tall.	SE facing slope around granite boulders. Brown-grey sandy loam.	Dense Low heath to 0.5 m. Corymbia calophylla, Darwinia citriodora, Hakea sp., Hibbertia sp., Hypocalymma sp., Trymalium sp.	>100 plants.		9/12/2011
6796451	5505	Darwinia apiculata	T		Uncleared area.				17/10/1982
1026704	5523	Darwinia pimelioides	4						30/08/1930
3200892	5523	Darwinia pimelioides	4		Brown loam with granite boulders.	Open woodland of Eucalyptus calophylla and E. wandoo with open heath to 1 m, with Xanthorrhoea sp., Daviesia horrida, Trymalium ledifolium, Diplolaena sp., Phyllanthus calycinus, Sowerbaea laxiflora, Hakea cristata.		Estimated 50+ mature, in bud and flower, burnt autumn 1989.	17/09/1992
9517634	5523	Darwinia pimelioides	4	Low shrubs, 20 cm high, spreading to upright. Ovate leaves, margins curled down. Downturned inflorescences in bud, bracts light green flushing pink at base and midrib. 4 flowers per infl.	Decomposed granite, W of granitic outcroppings. Partial to full shade.	Open Corymbia woodland. Hibbertia, Cassuarina, Lechenaultia, Banksia.	ca. 25 plants.	Darwinia phylogenomics 2022 sample ID: Dpim_1.	9/09/2022
1026720	5523	Darwinia pimelioides	4						/12/1925
1027190	5523	Darwinia pimelioides	4	Flowers and bracts small; low sub-shrub 8" - 10" tall.	Red loam.				1/10/1960

8816514	17150	Eremophila glabra subsp. chlorella	T	Shrub to 1 m high x ca 50 cm wide. Green-yellow flowers and small green round fruits in leaf axils.	In seasonally inundated Dampland in clay.	Melaleuca viminea and M. acutifolia Tall Open Scrub over Gahnia trifida and Juncus kraussii Very Open Sedgeland and weeds.	2 plants only.	Plants occur within a Conservation Category Wetland, BF site and TEC. Horses and land management have degraded majority of property.	24/10/2014
1277685	52779	Eryngium subdecumbens	3		Swamp.				18/12/1899
7316739	1984	Grevillea curviloba	T	Small upright shrub with curved leaflets, ripening warty fruit.	Dam at base of slope. Laterite, slope. Regrowth on excavated soil.	Eucalyptus marginata low woodland with mostly bare ground and regrowth of mixed shrub understorey.			25/11/2005

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
5299551	50985	Grevillea dissectifolia	3		N aspect. Slope. Dry brown/yellow loam/clay.	(Muir's) Open marri woodland. Hakea trifurcata, H. undulata, H. erinacea, Acacia pulchella, Dryandra lindleyana, D. armata, Daviesia horrida, Petrophile biloba, Xanthorrhoea preissii, Grevillea pilulifera.			18/10/1998
5299578	50985	Grevillea dissectifolia	3		N aspect. Slope. Dry brown/yellow loam/clay.	(Muir's) Open marri woodland. Hakea trifurcata, H. undulata, H. erinacea, Acacia pulchella, Dryandra lindleyana, D. armata, Daviesia horrida, Petrophile biloba, Xanthorrhoea preissii, Grevillea pilulifera.			18/10/1998
6691625	50985	Grevillea dissectifolia	3		Landform: slope/outcrop. Rock type; granite. Rock form: boulder. Soil type: sand, loam and clay. Soil colour: brown/yellow. Soil condition: dry.	Vegetation classification: Scattered Marri. Associated species: Hakea trifurcata Hakea undulata, Hakea erinacea, Acacia pulchella, Dryandra armata, Dryandra lindleyana, Grevillea pilulifera, Xanthorrhoea preissii.	ca 3 mature plants.	Condition of population: healthy/moderate.	7/11/2003
1068687	13086	Grevillea pimeleoides	4						/08/1901
5208769	13086	Grevillea pimeleoides	4		Red-brown clayey loam, with dolerite cobbels and boulders, on a very steep south-eastern lower slope.	Eucalyptus laeliae, E. calophylla, E. wandoo Low Woodland, over Trymalium floribundum, Xanthorrhoea preissii Dense Heath, over Macrozamia reidlii, Phyllanthus calycinus Low Heath, over Loxocarya flexuosa Tall Sedges.			8/10/1996
9630198	2107	Grevillea thelemanniana	T	Spreading, shrub 2 m x 3 m to 0.5 m high.	Seasonal dampland, grey sandy clay.	Tall Shrubland of Melaleuca acutifolia over Open Heath of Hypocalymma angustifolium, Acacia lasiocarpa, Grevillea thelemanniana, Verticordia densiflora var. densiflora over Herbland of Centrolepis aristata, Burchardia bairdiae with Austrodanthonia setace	Approximately 165 plants in a 0.84 ha area.	Plants are mostly in two areas; within 15 m of and parallel to Boundary Rd and 15-65 m from Boundary Rd toward the centre of the block.	14/11/2014
9630112	2107	Grevillea thelemanniana	T	Spreading, shrub 2 m x 2 m to 1.5 m high.	Seasonal dampland, grey/brown clayey sand.	Tall Open Scrub of Callitris pyramidalis, Melaleuca viminea, M. osullivanii, M. brevifolia, M. acutifolia over Very Open Sedgeland of Gahnia trifida, Hypolaena exsulca and Juncus kraussii with high cover of Cassytha racemosa.	8 plants in a 0.3 ha area on the SW corner of the block.	Horses on Lot are impacting remnant vegetation.	24/10/2014

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
2161567	2107	Grevillea thelemanniana	T	Dwarf shrub 30 cm to 100 cm high, with variable habit. Most plants low and prostrate. Foliage blue-green to yellow green.	In winter wet flat on grey sandy loam.	Associated with Actinostrobus pyramidalis, Banksia telmatiaea, Hypocalymma angustifolia, Calothamnus sp.			4/04/1990
2282895	2107	Grevillea thelemanniana	T	Low spreading bush with pinky-red flowers.	On sand.				22/05/1976
2161508	2107	Grevillea thelemanniana	T	Leaves simple or divided, light to mid-green, flowers red.	Sand and clayey sand, low lying flat.	Melaleuca bracteosa Heath A and mixed Low Heath C. Viminaria juncea, Banksia telmatiaea and Hypocalymma angustifolium association.			18/10/1990
5686938	2107	Grevillea thelemanniana	T	Low spreading shrubs 0.2-0.4 m in height. Flowers red.	Winter-wet, swampy area with yellow sand/grey clay soils.	Vegetation consisting of low Myrtaceous shrubs and Banksia, with frequent Actinostrobus pyramidalis, punctuated by open areas with small herbaceous ephemerals.	frequent.		25/09/1999
2161591	2107	Grevillea thelemanniana	T		Brown sandy clay, flat.	With Actinostrobus pyramidalis, Calothamnus hirsutus, Hypocalymma angustifolium, Verticordia plumosa and Melaleuca spp.			31/10/1990
6512631	2107	Grevillea thelemanniana	T	Spreading shrub to 0.3 by 0.7 m; flowers red.	Palusplain; grey clayey sand over clay.	Melaleuca leptoclada Tall Shrubland over Mixed Open Low Heath over Leptocarpus canus Sedgeland.	scattered in Low Heath Layer.		22/06/1995
8436959	2107	Grevillea thelemanniana	T	Widely spreading shrub 0.4-0.8 m high x 0.5-1.5 m wide. Red flowers and divided pinnatisect leaves.	Edge of a seasonal clay based open depression, on slightly deeper sandier soils. Moist grey-brown sandy loam over clay.	Tall shrubland of Melaleuca acutifolia, M. brevifolia and Callitris pyramidalus over Shrubland of Hypocalymma angustifolia, Acacia lasiocarpa, Verticordia densiflora var. densiflora over Very Open Sedgeland of Chaetanthus aristatus and Lepidosperma squam	69 plants.		13/09/2012
1044575	1469	Haemodorum loratum	3	Bracts and bracteoles greenish black, opaque, without conspicuous veining, the margins membranous, white. Outer perianth segments greenish black, glossy, inner segments black, dull, edged with orange. Plants at early flowering stage.	Eastern edge of coastal plain close to foot of Darling Scarp. Grey sand at surface changing to yellowish at about 10 cm deep.	Roadside strip of Jarrah (Eucalyptus marginata) and Banksia woodland with low shrub understorey.		Frequent but many plants vegetative.	19/11/1984

Sheet	NameID	Taxon	Cons_Code	Plant_Desc	Site	Vegetation	Frequency	Notes	Date
7684126	1469	Haemodorum loratum	3		Midslope. Brown sand.	Low Woodland of mixed species including Banksia menziesii, Eucalyptus marginata over Open Low Heath of mixed species dominated by Eremaea pauciflora, Allocasuarina humilis, Xanthorrhoea preissii and Lambertia multiflora var. darlingensis. Associated spec		Healthy population.	23/09/2004
6427634	1469	Haemodorum loratum	3	Annually renewed perennial herb.	Dune Ridge, flat ground, brown sand over yellow sand, well drained.	Associated species: Banksia menziesii.			10/11/1995
1111620	6686	Halgania corymbosa	3	Flowers blue.					/11/1919

Protected Matters Search Tool Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 18-Sep-2025

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	7
Listed Threatened Species:	60
Listed Migratory Species:	26

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	254
Commonwealth Heritage Places:	None
Listed Marine Species:	30
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	16
Regional Forest Agreements:	1
Nationally Important Wetlands:	2
EPBC Act Referrals:	22
Key Ecological Features (Marine):	None
Biologically Important Areas:	None
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area	In feature area
Clay Pans of the Swan Coastal Plain	Critically Endangered	Community likely to occur within area	In buffer area only
Corymbia calophylla - Kingia australis woodlands on heavy soils of the Swan Coastal Plain	Endangered	Community known to occur within area	In buffer area only
Empodisma peatlands of southwestern Australia	Endangered	Community may occur within area	In feature area
Shrublands and Woodlands of the eastern Swan Coastal Plain	Endangered	Community known to occur within area	In buffer area only
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area	In buffer area only
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community may occur within area	In feature area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			
Botaurus poiciloptilus			
Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area	In feature area
Calidris acuminata			
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area	In feature area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat may occur within area	In buffer area only
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area	In feature area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area	In buffer area only
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area	In feature area
Zanda baudinii listed as Calyptorhynchus baudinii Baudin's Cockatoo, Baudin's Black-Cockatoo, Long-billed Black-cockatoo [87736]	Endangered	Roosting known to occur within area	In feature area
Zanda latirostris listed as Calyptorhynchus latirostris Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Breeding known to occur within area	In feature area
INSECT			
Leioproctus douglasiellus a short-tongued bee [66756]	Critically Endangered	Species or species habitat may occur within area	In buffer area only
MAMMAL			

Scientific Name	Threatened Category	Presence Text	Buffer Status
Bettongia penicillata ogilbyi Woylie [66844]	Endangered	Species or species habitat may occur within area	In buffer area only
Dasyurus geoffroii Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat known to occur within area	In feature area
Setonix brachyurus Quokka [229]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
OTHER			
Westralunio carteri Carter's Freshwater Mussel, Ambiguus Mussel [86266]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
PLANT			
Acacia anomala Grass Wattle, Chittering Grass Wattle [8153]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Acacia aphylla Leafless Rock Wattle [13553]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Andersonia gracilis Slender Andersonia [14470]	Endangered	Species or species habitat likely to occur within area	In feature area
Anigozanthos viridis subsp. terraspectans Dwarf Green Kangaroo Paw [3435]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Anthocercis gracilis Slender Tailflower [11103]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Banksia mimica Summer Honeypot [82765]	Endangered	Species or species habitat likely to occur within area	In feature area
Calytrix breviseta subsp. breviseta Swamp Starflower [23879]	Endangered	Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Chamelaucium lullfitzii listed as Chamelaucium sp. Gingin (N.G.Marchant 6)			
Gingin Wax [92777]	Endangered (listed as Chamelaucium sp. Gingin	Species or species habitat may occur within area	In feature area
Conospermum undulatum			
Wavy-leaved Smokebush [24435]	Vulnerable	Species or species habitat known to occur within area	In feature area
Darwinia apiculata			
Scarp Darwinia [8763]	Endangered	Species or species habitat known to occur within area	In buffer area only
Diplolaena andrewsii			
[6601]	Endangered	Species or species habitat likely to occur within area	In feature area
Diuris drummondii			
Tall Donkey Orchid [4365]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Diuris micrantha			
Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Diuris purdiei			
Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat likely to occur within area	In feature area
Drakaea elastica			
Glossy-leafed Hammer Orchid, Glossy-leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat likely to occur within area	In feature area
Drakaea micrantha			
Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat may occur within area	In feature area
Eleocharis keigheryi			
Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Eremophila glabra subsp. chlorella			
[84927]	Endangered	Species or species habitat likely to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
Eucalyptus x balanites			
Cadda Road Mallee, Cadda Mallee [87816]	Endangered	Species or species habitat may occur within area	In feature area
Grevillea curviloba subsp. incurva			
Narrow curved-leaf Grevillea [64909]	Endangered	Species or species habitat may occur within area	In feature area
Grevillea flexuosa			
Zig Zag Grevillea [2957]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Macarthuria keigheryi			
Keighery's Macarthuria [64930]	Endangered	Species or species habitat known to occur within area	In feature area
Morelotia australiensis listed as Tetraria australiensis			
Southern Tetraria [92784]	Vulnerable	Species or species habitat may occur within area	In feature area
Synaphea sp. Fairbridge Farm (D.Papenfus 696)			
Selena's Synaphea [82881]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
Thelymitra dedmaniarum			
Cinnamon Sun Orchid [65105]	Endangered	Species or species habitat may occur within area	In feature area
Thelymitra stellata			
Star Sun-orchid [7060]	Endangered	Species or species habitat known to occur within area	In feature area
Trithuria occidentalis			
Swan Hydatella [42224]	Endangered	Species or species habitat likely to occur within area	In buffer area only
REPTILE			
Caretta caretta			
Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area	In buffer area only
Chelonia mydas			
Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
Dermochelys coriacea			
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area	In buffer area only
Natator depressus			
Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
SHARK			
Sphyrna lewini			
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area	In buffer area only

Listed Migratory Species [Resource Information]

Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Marine Birds			
Apus pacificus			
Fork-tailed Swift [678]		Species or species habitat likely to occur within area	In feature area
Diomedea amsterdamensis			
Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only
Diomedea epomophora			
Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea exulans			
Wandering Albatross [89223]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Macronectes giganteus			
Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only
Macronectes halli			
Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Phaethon rubricauda			
Red-tailed Tropicbird [994]		Species or species habitat may occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area	In buffer area only
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Migratory Marine Species			
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area	In buffer area only
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area	In buffer area only
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat may occur within area	In buffer area only
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat may occur within area	In buffer area only
Natator depressus Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Migratory Terrestrial Species			
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Wetlands Species			
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area	In feature area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State	Buffer Status

Listed Marine Species			[Resource Information]
Scientific Name	Threatened Category	Presence Text	Buffer Status
Bird			
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area	In feature area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area overfly marine area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area	In feature area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area	In feature area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat likely to occur within area	In buffer area only
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Phaethon rubricauda Red-tailed Tropicbird [994]		Species or species habitat may occur within area	In buffer area only
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area	In feature area
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area	In buffer area only
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat likely to occur within area overfly marine area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area	In feature area
Reptile			
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area	In buffer area only
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area	In buffer area only
Natator depressus Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only

Improving rabbit biocontrol: releasing another strain of RHDV, sthrn two thirds of Australia	2015/7522	Not Controlled Action	Completed	In feature area
INDIGO Central Submarine Telecommunications Cable	2017/8127	Not Controlled Action	Completed	In feature area
Pipeline Extension, Hazelmere and Helena Valley, WA	2018/8239	Not Controlled Action	Completed	In buffer area only
Residential development of Lots 302, 308, 320 and part of Lot 9502, Hawtin Rd, Forrestfield, WA	2016/7770	Not Controlled Action	Completed	In buffer area only
Ridge Hill Road intersection modification and offsite water main installation, Gooseberry Hill, WA	2020/8842	Not Controlled Action	Completed	In buffer area only
Roe Highway Noise Wall, High Wycombe, WA	2014/7149	Not Controlled Action	Completed	In buffer area only
Tonkin Highway Upgrade, Guildford Road to Great Eastern Highway, WA	2019/8545	Not Controlled Action	Completed	In buffer area only
Not controlled action (particular manner)				
Commercial Estate and Aeronautical Infrastructure Development, Precincts 2A & 2B	2006/3021	Not Controlled Action (Particular Manner)	Post-Approval	In buffer area only
South West Metropolitan Railway Project	2003/1175	Not Controlled Action (Particular Manner)	Post-Approval	In buffer area only

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

APPENDIX 7

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Threatened, Extinct and Specially Protected fauna or flora are species which have been adequately searched for and are deemed to be, in the wild, threatened, extinct or in need of special protection, and have been gazetted as such.

The lists of Threatened, Extinct and Specially Protected species are listed under Part 2 of the Biodiversity Conservation Act 2016.

Categories of Threatened, Extinct and Specially Protected fauna and flora are:

T Threatened species

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

> ***Threatened fauna*** is the species of fauna that are listed as critically endangered, endangered or vulnerable threatened species.
>
> ***Threatened flora*** is the species of flora that are listed as critically endangered, endangered or vulnerable threatened species.

The assessment of the conservation status of threatened species is in accordance with the BC Act listing criteria and the requirements of Ministerial Guideline (Number 1) and Ministerial Guideline (Number 2) that adopts the use of the International Union for Conservation of Nature (IUCN) Red List of Threatened Species Categories and Criteria 4, and is based on the national distribution of the species.

CR Critically endangered species

> Threatened species considered to be "*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*".
>
> Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines.

EN Endangered species

> Threatened species considered to be "*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*".
>
> Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines.

VU Vulnerable species

> Threatened species considered to be "*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*".

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines.

Extinct Species

EX Presumed extinct species

Species where "*there is no reasonable doubt that the last member of the species has died*", and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

EW Extinct in the wild species

Species that "*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*", and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Currently only fauna are listed as species of special conservation interest.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Currently only fauna are listed as species otherwise in need of special protection.

P Priority species

Priority is not a listing category under the BC Act.

All fauna and flora are protected in WA following the provisions in Part 10 of the BC Act. The protection applies even when a species is not listed as threatened or specially protected, and regardless of land tenure (State managed land (Crown land), private land, or Commonwealth land).

Species that may possibly be threatened species that do not meet the criteria for listing under the BC Act because of insufficient survey or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of prioritisation for survey and evaluation of conservation status so that consideration can be given to potential listing as threatened.

Species that are adequately known, meet criteria for near threatened, or are rare but not threatened, or that have been recently removed from the threatened species list or conservation dependent or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of priority status is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, for example, agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation.

Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements for threatened listing and appear to be under immediate threat from known threatening processes. These species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, for example, national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation.

Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements for threatened listing and appear to be under threat from known threatening processes. These species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations and the species does not appear to be under imminent threat or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat.

Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. These species need further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

(a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.

(b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as a conservation dependent specially protected species.

(c) Species that have been removed from the list of threatened species or lists of conservation dependent or other specially protected species, during the past five years for reasons other than taxonomy.

(d) Other species in need of monitoring.

Western Australian Ecological Communities

<u>Threatened Ecological Communities</u>

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally

destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤5 occurrences or a total area of ≤ 100ha).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤10 occurrences or a total area of ≤200ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

(i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or:

(ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;

(iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

(i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.

(ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.

(iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
b) the following subparagraphs are satisfied:
    i. the species is a species of fish;

ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

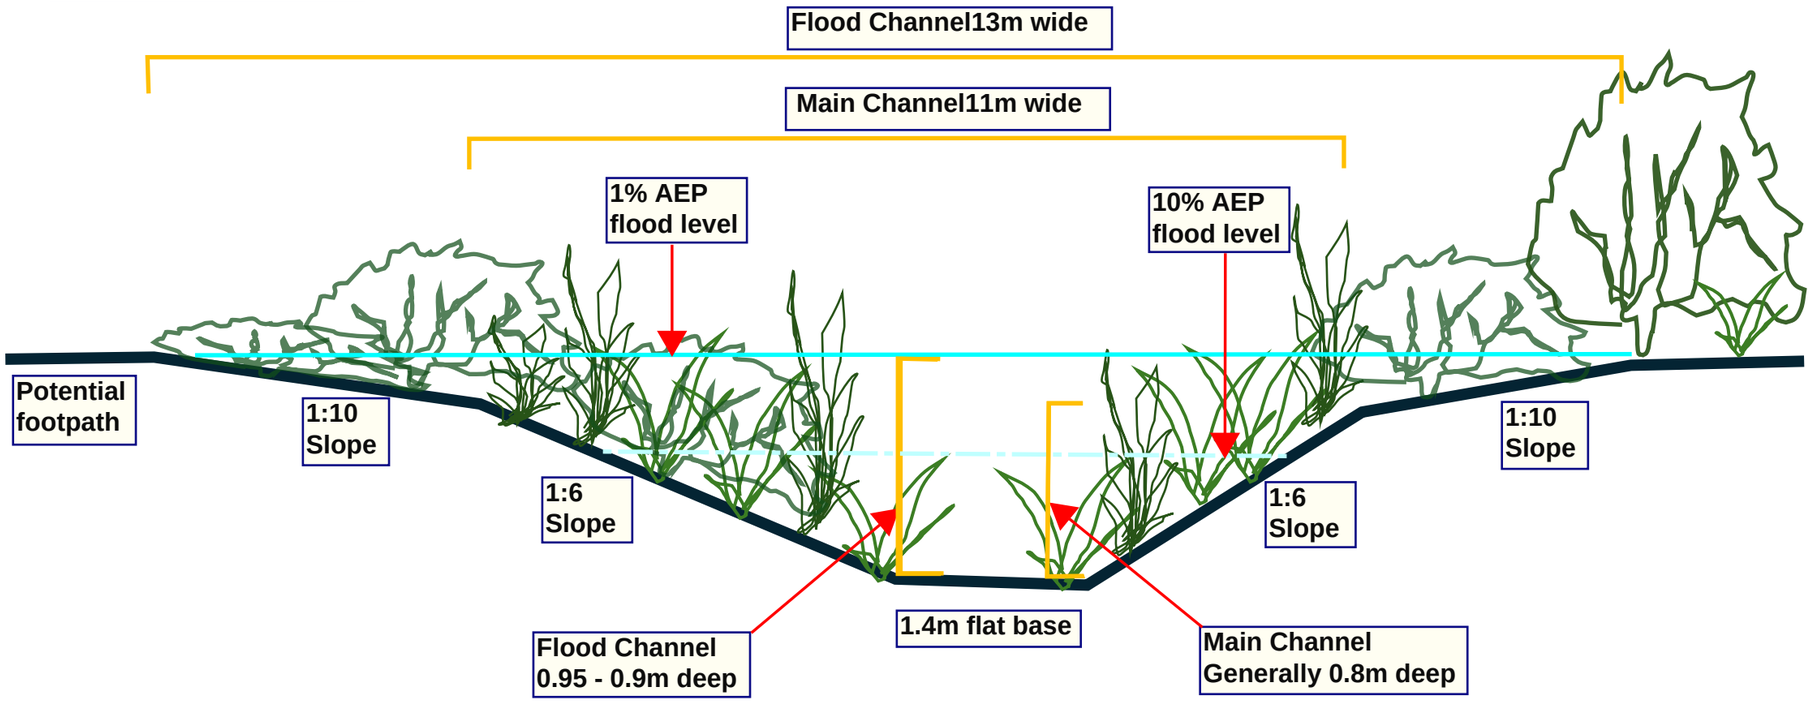

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium–term future (indicative timeframe being the next 50 years).

Appendix G LWMS CHECKLIST

Appendix 2 Local water management strategy checklist

Local water management strategy item	Comment/Location	Achieved
Executive summary		
Summary of the development design strategy, outlining how the design objectives are proposed to be met	Executive Summary - Pg1 and Section 2 Key Elements Pg 3,4	
Introduction		
Total water-cycle management – principles and objectives Planning background Previous studies	Section 2 Key Elements Pg 3,4 Executive Summary – 1.1 Planning Summary & Referencing Document listed in each section plus Section 14 Reference summary Pg 39	
Proposed development		
Structure plan, zoning and land use Key landscape features Previous land use	Executive Summary – Site Summary & Planning Summary Pg2	
Landscape – proposed public open space areas, public open space credits, water source, bore(s), lake details, irrigation areas (if applicable)	Executive Summary – Site Summary & Planning Summary Pg2 plus Section 2 Fig 3 Pg 4. Section 10 Water Dependent Ecosystems Management Strategy, Section11 for irrigation options	
Design criteria		
Agreed design objectives and source of objectives	Section 2 Key Elements Pg 3,4 Plus Sections 8-11for more detail	
Existing information and more detailed assessments (monitoring). How do the site characteristics affect the design?	Existing Information Sections 3-7 for current conditions. Sections 8-11 for how these characteristics and managed.	
Site conditions – existing topography/contours, aerial photo underlay, major physical features	Section 3	
Geotechnical – topography, soils including acid sulfate soils and infiltration capacity, test pit locations	Section 5	
Environmental – areas of significant flora and fauna, wetlands and buffers, waterways and buffers, contaminated sites	Section 4	
Surface water – topography, 100- year floodways and flood fringe areas, water quality of flows entering and leaving (if applicable)	Section 7	
Groundwater – topography, pre- development groundwater levels and water quality, test bore locations	Section 6	
Water sustainability initiatives		
Water efficiency measures – private and public open spaces including method of enforcement	Section 11	
Water supply (fit-for-purpose) strategy, agreed actions and implementation	Section 11	
Wastewater management	Section 11	

Stormwater management strategy		
Flood protection – peak flow rates, volumes and top water levels at control points, 100-year flowpaths and100-year detention storage areas	Section 8, especially sub Section 8.3, 8.7 and 8.8	
Manage serviceability – storage and retention required for the critical 5- year ARI storm events Minor roads should be passable in the 5-year ARI event	Section 8 especially sub Section 8.5, 8.6	
Protect ecology – detention areas for the 1-year 1-hour ARI event, areas for water quality treatment and types of agreed structural and non-structural best management practices and treatment trains (including indicative locations). Protection of waterways, wetlands (and their buffers), remnant vegetation and ecological linkages	Section 8 especially sub Section 8.4 Section10	
Groundwater management strategy		
Post-development groundwater levels, existing and likely final surface levels, outlet controls, and subsoil drain areas/exclusion zones	Section 9.1	
Actions to address acid sulfate soils or contamination	Section 9.2	
The next stage – subdivision and urban water management plans		
Content and coverage of future urban water management plans to be completed at subdivision. Include areas where further investigations are required before detailed design.	Section 13	
Monitoring		
Recommended future monitoring plan including timing, frequency, locations and parameters, together with arrangements for ongoing actions	Section 12	
Implementation		
Developer commitments	Section 13	
Roles, responsibilities, funding for implementation	Section 13	
Review	Section 13
