VALENCIA NURSING CARE - FLY NUISANCE RESPONSE STRATEGIES

Dear Mr. Ranford,

We refer to the email sent by yourself on the 17th of November in regards to addressing the fly nuisance problem affecting the Valencia Nursing Home site.

In order to reduce the impact of flies affecting residents of the proposed Valencia Nursing Care building, we would employ the following measures:

- provide insect screens to all openable windows to prevent flies from entering the building
- provide insect screen doors on all entrances to the nursing home (except the main entry door which will be an automatic sliding door for convenience)
- install low toxicity automated insecticide spray systems in common areas where necessary to eliminate any flies that do enter the building
- include hose down/ cleaning schedules of outdoor rubbish collection areas as part of the regular facility maintenance
- Plant fragrant plant species in the gardens that repel flies such as citronella grass, lavender and bay laurel

We hope that these strategies meet your satisfaction. Please contact Adrian Price on 0412 112 399 if any further information is required.

Kind Regards
